Find out what variables are used where with this handy utility.	
• <i>Suicide Run</i>	117
A superb C64 game to type in.	

Mini Office II

6 powerful home and business programs in just **ONE** package – at a price that simply can't be matched!

Outstanding value for money . . . If you want to use your 64 as a highly efficient office machine, Mini Office certainly gives you the power you need.

– CCI

It's a brilliant introduction to business computing. The only fault I can find is that it's just too generous for the price – Database could have sold it for a lot more. It makes some of its overpriced competitors hang their heads in shame.

– Commodore User

'This package is incredible value' – *Daily Mail Home Computing Guide*

Voted Business Program of the Year – 1985 AND 1986
Pop. Computing Weekly

WORD PROCESSOR

Compose a letter, set the print-out options using embedded commands or menus, use the mail merge facility to produce personalised circulars – and more!

SPREADSHEET

Prepare budgets or tables, total columns or rows with ease, copy formulae absolutely or relatively, view in either 40 or 80 column modes, recalculate automatically – and more!

GRAPHICS

Enter data directly or load data from the spreadsheet, produce pie charts, display bar charts side by side or stacked, overlay line graphs – and more!

DATABASE

Build up a versatile card index, use the flexible print-out routine, do powerful multi-field sorting, perform all arithmetic functions, link with the word processor – and more!

COMMS MODULE

Using a modem you can access services such as MicroLink and book rail or theatre tickets, send electronic mail, telex and telemessages in a flash – and more!

LABEL PRINTER

Design the layout of a label with the easy-to-use editor, select label size and sheet format, read in database files, print out in any quantity – and more!

DATA STATEMENTS

Adventureline

Phantasie III - The Wrath of Nikodemus is about to be released in the UK by US Gold. Here is the final confrontation between a band of adventurers and the Dark Lord Nikodemus and his army of horrible creatures.

Phantasie III is a multiple character role-playing game wherein players can assemble up to six adventurers. They can choose combinations of the eight races and six classes of characters which include humans, elves, swarves, thieves, warriors and wizards. The characters must use their skills to invade difficult terrain, escape from dungeons, destroy demons and finally confront the Dark Lord himself. Over 80 types of monsters must be met in the Myriad dungeons.

The game comes complete with disk, rulebook and data card and will cost £19.99 on the C64/128.

From Gremlin, there's *MASK* featuring the adventures of Matt Tracker.

A battle between MASK agents and the enemy VENOM agents has left the planet battle scarred and almost lifeless. Matt's fellow MASK agents are scattered on earth throughout space and time and Matt must save them using his damaged Thunderhawk transporter.

Once Matt has managed to reach earth he faces terrible danger in the shape of flying boulders, runaway trains and live volcanoes. In his quest he must collect items to save his pals while avoiding VENOM patrol craft.

MASK is the first computer game based on the adventure of Matt Tracker and is due for release in July for the C64.

Gremlin: Alpha House, 10 Carver Street, Sheffield S1 4FS. Tel: 0742 753423.

In The Arcade Style

Gremlin has bounced back into the arcade games field with two new rubbery releases - *Re-Bouncer* and *Thing* bounces back.

Bouncer, the star of the C64 game *Re-Bouncer*, is a tennis ball that doesn't need a racquet. In a 3D world of colourful hexagonal slabs, collapsible floors and high speed bouncing, Bouncer must hurtle through 18 levels of enemy thronged scrolling platforms in order to reach the Master Alien. Fleets of aliens bar his path and a sentinel awaits at the end of each level to provide further problems. Bouncer can defend himself with fire power and armour plating, to be picked up along the way.

Thing on a Spring returns in a sequel entitled *Thing Bounces Back*. Having dealt with the toy goblin in his first escapade, he must now stop the factory computer which is auto-producing toys.

In his re-programming adventure he can alter the layout of rooms and can travel through the factory pipe network, whilst picking up software to aid his task. Weird goblins lurk in all locations, anxious to deplete Thing's oil stocks in order to make his spring seize up.

Available for the C64, *Thing* is in the shops now.

Pirhana has announced a new arcade game for the C64 which will be available in September. *The Astonishing Adventures of Mr Weems and The She Vampires* features Weems, a failed accountant and lion tamer, hunting vampires with a rapid fire garlic gun.

Attacked by sharp ganged bats, dumb Frankenstein monsters and thirsty She Vampires, Weems is fighting his way through the Vampire's mansion for a confrontation with the Great She Vampire herself.

Ariolasoft has finally managed to release *They Stole a Million*, a game originally scheduled for December 1986.

Product Manager Mark Easton said: "We were caught on the job alright, the delay meant an extra three months hard labour for us and plenty of ackers down the tube on pre-Christmas promotion." The game is now available on the C64/128, on cassette at £9.99 and disk at £14.99.

Touchline:

Gremlin: Alpha House, 10 Carver Street, Sheffield S1 4FS. Tel: 0742 753423.

DATA STATEMENTS

The Tube.

Into Space

Enterprise is a new release from Mastertronic in which you, a criminal from Earth, must go and try and make your fortune by trading with the millions of aliens in outer space.

However earth's problems of poor economy are common to the other planets in the universe.

Enterprise features 3D graphics text communications with alien computers, plus a flight simulator to land on each of the planets. It will be available soon for the C64, priced at £8.95.

In *Zynaps*, a new space shoot 'em up from Hewson, you must try and escape the horrors of captivity on an alien planet using your skill and lightning reactions to avoid asteroid storms and missiles. Styled in comic book format, the game will be based around chapters and episodes. There are over 450 screens of scrolling action. Your aim, to reach the alien stronghold so the final conflict can begin.

Zynaps is priced at £8.95 for C64 cassette and £12.95 for the disk version and the release date is set at June 29.

Another alien zapping game has just been launched by Quicksilver. Entitled *The Tube*, the game features a complex control panel on the screen at all times to keep you informed about your status' energy, time, distance and shields. It's available on both cassette and disk for the C64 at £8.95 and £12.95 respectively.

Print Outs

Star Micronics has recently launched the ND-15 dot matrix printer.

The new model provides draft printing at 180 characters per second and near letter quality at 45 cps. It has been designed for the budget conscious user and is priced at £489. As with all Star models, the ND-15 features a front panel which takes the drudge out of fiddling with DIP switches for commonly used functions. Via the panel, the user can select print mode (draft or NLQ), choose pitch settings, access the form length control, set margins and carry out several other functions.

Tractor feed and semi-automatic sheet feed are fitted as standard, and an available option is a low cost automatic cut sheet feeder. The front panel also provides forward and reverse micro-feed control.

Also standard is the Star slot-in interface which ensures connection to all major micros.

Touchline

Star Micronics: Craven House, 40 Uxbridge Road, London W5 2BS. Tel: 01 840 1800.

And From US Gold

Activision and Telecomsoft have come to an agreement to release nearly 40 previously full price Activision titles on the Firebird Silver label at £1.99.

Silver Range boss Chris Smith said: "There are some really cracking games here for £1.99. Titles such as *Back to the Future*, *I of the Mask* and *Pitfalls I and II* head the series." There are also three games brand new to the European market: *Breakstreet*, *Futureball* and *Pyramids of Time* all for the C64.

Pack Patrol for the C64 was recently released under licence from Activision on the silver label and was very successful. Rod Cousens of Activision commented: "The success of *Pack Patrol* prompted us to

contemplate the re-release of our back catalogue in the budget sector. Telecomsoft had clearly demonstrated their effectiveness to us, and it made sense to conclude an arrangement which was in the interest of all concerned."

The first titles will be in the shops in the early summer and the rest will follow over the next two years.

There are three new Firebird titles for the C64 already in the shops. *Gunstar* is a fast shoot 'em up in which you have to destroy the alien forces which are terrorizing the earth. The first state involves shooting alien craft whilst avoiding their fire, while in the second stage you must dodge asteroids in the asteroid minefield. Finally, as

DATA STATEMENTS

commander of the Gunstar fleet you must annihilate the alien command ship.

In *UFO* you must pilot the F21 Condor, the only craft capable of combatting the UFOs which are closing in on New York. However, watch your step because the F21 is still experimental and many things could go wrong before you complete your mission.

Finally, on a more down to earth level, you could choose to guide *Gerry the Germ* around an unfortunate human's body. Gerry needs to try and cause as much damage as possible, ultimately ending in a heart attack. Is this a truly 'sick' game?

Football Manager, an addictive game you must surely have heard of, has now been released by Prism as a budget title. If there are any C64, C16 or Plus/4 owners who don't possess this all-time favourite, take heart. You can now buy it for just £2.99.

Indiana Jones - Coming soon.

Budget Software

US Gold has announced the release of three electronic novels from Broderbund.

Mindwheel, *Essex* and *Brimstone* are all interactive adventures specially written for computers and each comes with its own hard back novel.

Mindscape allows you to enter the minds of four deceased geniuses in order to retrieve the Wheel of Wisdom, civilisation's only hope of a salvation.

Essex is an intergalactic adventure featuring the colossal Starship Essex. You must lead a mission to save Professor Klein by combatting the evil Vollchons in deep space. The survival of the universe is at stake.

Finally, *Brimstone* gives you the opportunity to relive the adventures of the ancient Albion manuscripts and travel into the underworld realms of Ulro.

All the novels are disk based and priced at £24.99 for the C64 versions.

Also, we've received news that US Gold is releasing *Indiana Jones* for the C64, a game based on the very popular films featuring the Harrison Ford character. Look out for more news on this.

Budget disks from Players.

There are two new C64 titles from Mastertronic. *Frenesis* is in the £1.99 range and is a 40 level shoot 'em up. *Voidrunner* is £2.99 and is a Jeff Minter zapping game.

The power House has released *Hercules* for the C16. As C64 owners may know, it's a platform game based on the ancient Greek myth of the 12 labours of Hercules. The price is only £1.99.

Finally, budget software house, Players has come up with affordable disk based software. The two game packs are now in the shops priced at only £4.95 for the C64/128. The first in this range features the two games *Fruity* and *Fungus*.

Wargaming

Wargaming seems to be becoming more and more popular with computer games players. Here's a quick rundown of the many new titles available in the coming weeks.

Colonial Conquest is from US Gold and is a game of world domination for up to six players.

PSS, a company specialising in war simulations is releasing a three game pack priced at £12.95 on cassette and £17.95 on disk for the C64. The games featured in this collection are *Battle of Britain*, *Theatre Europe* and *Falklands 82*.

SSI, American based war game house, has announced the forthcoming B24 a World War II simulation of 19 bombing missions over Rumania. The price of this game in the US is \$34.95,

but maybe you should look out for it over here from US Gold in the future.

Also from SSI for the C64 is an American Civil War game entitled *Rebel Charge at Chickamauga*. The game recreates a two day battle which took place in September 1863. It would set you back \$49.95, if you could get across the Atlantic to buy it.

US Gold has also come up with a compilation for the C64. *War Game Greats* features historical battles from World War II in the games *Battle for Normandy*, *Knights of the Desert*, *Combat Leader* and *Tigers in the Snow*. Cassette version costs £14.99 and the disk version is £19.99.

For those of you having problems with mirrorsoft's *Strike Force Harrier*, help is at hand with the Harrier Hotline on 01 377 4900 or write to the address in Touchline.

Robot World

Now there is a build-your-own-robot kit available which may even prove to be an educational aid for youngsters.

Educated Archie is a mini robot that emulates more sophisticated industrial types. It has been developed by Oxbridge Technology of Milton Keynes for use with home computers including the C64.

Supplied in kit form with concise instructions *Archie* can be assembled in about two hours by anyone who can use a screwdriver and a pair of pliers. Then, it is simply connected to a power pack and the serial port of your C64, the software disk is inserted into the drive and *Archie* is ready to go.

Archie's instruction book is written in standard English and options which appear on your screen guide the user through different sequences so that learning can be achieved easily by practice.

Archie has the ability to pick up and place objects and hold and use tools. Its manipulative arm has a wrist and elbow and a sensitive hand which can grip objects of up to 250gms in weight.

This fascinating robot is priced at £220 and is available from the makers.

Recruitment Program

It's the time of year when software houses are fighting to snap up bright young programming talent, so look out for the ads.

Audiogenic has announced a big incentive to would-be star programmers. Any Audiogenic programmer whose game gets in the Gallup top 10 will be given a Commodore Amiga 500 worth over £500. For a program that reaches the number one spot, there's an Amiga 2000 with a hi-res monitor, worth over £1500. These bonuses are in addition to the normal royalties.

Audiogenic's Peter Calver said: "We're looking for top people, not necessarily those who've already made a name for themselves, but the ones who are about to reach their peak."

Code Masters, the budget software house has been offering high conversion fees to programmers. Recently the company offered £3000 for a Spectrum version of *Grand Prix Simulator*. Code Masters also needs programmers to convert 12 other titles.

Code Masters' Jim Darling said: "We are currently spending in excess of £31,000 converting our titles to other formats. To all intents and purposes our budget for top quality original games is almost unlimited. We are determined to produce games of outstanding quality."

Superior Software claims to have had a fantastic response to its recent recruitment campaign which involves supplying applicants with a free booklet to put them on the right track.

The author of the book, *Success in Software*, is superior's MD Richard Hanson. He said: "So far, we have been receiving an average of 75 replies a day to the advertisements and the feedback from recipients of the booklet has been extremely positive. We have received a number of programs that we intend to launch during the next 18 months, but most importantly, we have found authors for many of our premier 1987/8 projects."

There is still work available from Superior. Copies of the booklet can be obtained by sending details of your abilities to Richard Hanson at the address in our Touchline.

I.Q.

If you hate shooting aliens and feel that you need something more intellectual to stimulate your grey matter, then look over this selection of games.

I.Q.

An appropriate title for this section of the magazine and a strange game to boot. Do you remember the game of boxes that you used to play as a kid? A pattern of dots was drawn on a piece of paper and players took it in turns to join two of the dots together. If you completed a square, you could put your initial in it and have another go. I.Q. is a sort of computerised version of boxes.

Instead of having squares to complete, there are hexagons. Each dot is surrounded by six others and if you can complete the sixth of the spokes emanating from a dot, then the territory becomes yours. So far, there is nothing to suggest anything out of the ordinary. What is different about I.Q. is that you can train your playing piece to move round the board for you.

The piece is called a SAIL – super artificially intelligent lifeform – and it works as follows. As you make the first few moves, the sail ‘remembers’ how it responded in a certain situation. If it encounters the same position again, it will move the same way again. The simplest patterns are straight lines and zig-zags. Your sail will continue to lay a trail until it

comes to a pattern that it does not recognise. You must then input the next move.

You can play against up to three different opponents, either human or computer. As a new trail is laid to a particular territory, so all the trails in that territory change to that colour. The result is a spectacular blur of changing shapes and shades – a sort of thinking man's Psychedelia. If a trail has no exit from a territory, it dies. This is the usual case when two colours are converging on the last two spokes of a territory. When all the trails are dead, the game ends.

I.Q. is a strange, most original game. Initial bewilderment soon turns to fascination but I have considerable doubts as to whether there is any great lasting appeal. There was no compulsion to try and do that little bit better and work out what the best tactics were – an essential requirement for any strategy game.

G.R.H.

THE DETECTIVE

A private eye should expect some peculiar cases from time to time but none were stranger than the MacFungus case. A message is left anonymously that this well known rich eccentric has died. The circumstances seem to be decidedly dodgy so you – Inspector Snide – decide to investigate.

The Detective is an icon driven graphic adventure. You are free to wander at will round MacFungus' huge mansion, the border flashes if there is anything around that may be of interest to you. A quick press of the fire button brings up a series of icons representing your possible actions. Which icons appear depend on your situation at the time. For example, the 'question' icon will not appear if there is no-one else in the room to talk to.

The other guests in the mansion are the typical selection of weirdos found only in murder mysteries. A dodgy vicar, a mad, retired army type and the inevitable butler who, the instructions assure us, is the one who did the dastardly deed, or deeds plural as several other accidents quickly occur. The young lady of the house was soon squashed by a falling piano, obviously playing in the key of A flat minor!

Your first task will be to map the house, although the secret passages may prove tricky. The interaction between you and the guests is minimal and I found it annoying that they would tell me that a murder had been committed but not where. Another example is that when you start the game, the butler says that he will show you to your room and then takes you on a wild goose chase all over the house. Couple

this with a less than friendly icon system and an abundance of spelling mistakes and the game quickly loses whatever initial appeal it had.

G.R.H.

Touchline

THE BIG SLEAZE

In New York in 1930, time of the Great Depression, there was only a job of work available to you if, like Sam Spillade,

you were a real thicko, private investigator. Of course, this presupposes that you will of course find something to investigate but the area that you work out of is rough and the dames smooth in all the right places so it shouldn't prove to be too difficult.

Thus, you find yourself in the office waiting for an adventure to happen. Sure enough, two cases suddenly appear. The game would be a bit boring otherwise. A curvacious broad has lost her rich daddy and someone else is being blackmailed over a photograph. As both cases come complete with cheques, you are back in business again.

From here, the plot goes rapidly downhill. Written by Fergus McNeill, author of *The Boggit* and *Bored of the Rings*, it is one glorious send up from start to finish of every American detective story you have ever read. The atmosphere is superbly built up and the humour, while not being the sort of thing to show a maiden aunt, is guaranteed to raise a titter or three.

The game loads in three parts although you will need to complete one part before you are allowed to progress to the next. The parser is more than adequate and I couldn't find any examples of obscure vocabulary being used.

As is usual with this type of game, it is difficult to say very much about it without giving away the plot or spoiling the jokes but suffice to say, this is my favourite McNeill creation to date. Go and buy a copy. You won't be able to keep your face straight when watching the Maltese Falcon ever again.

Slimline 64

Fed up with the way your C64 looks? Give it a super slimline look with a new case.

By Stuart Cooke

Commodore 64 computers have had the same boring look for a number of years now, only with the recent advent of the 64C has the tried and tested computer had a face lift and been made to look a little more modern.

Owners of what are no doubt grubby, scratched, coffee stained old style cases can now give their C64s a bright new look by replacing the case with Slimline 64 from Evesham Micros.

The case is a straight replacement for the existing one. All of the computers innards being transfered to the new one. If your old case was in the same state as mine then the best place for this is probably the bin.

Fitting the case is simplicity itself and should present no problems to anyone with even a rudimentary knowledge of how to hold and use a screwdriver.

Three screws hold the C64 old style case together, removing these and removing the keyboard connectors from the circuit board splits the case into its two components. The keyboard and circuit board can then be transfered to the new case by simply unscrewing them from the case. Once this is done few screws simply hold the new case together.

Low profile

The Slimline 64 case is a vast improvement on the old case. The keyboard is much lower at the front making it much easier to type on. I hate the high keyboard on the normal C64 and find that it makes my wrists

ache when typing for a long time. I suppose that this is really personal preference but I do like the lower keyboard.

C64 owners that have reset switches and *Dolphin Dos* will be pleased to know that there are holes in the rear of the case ready made for their associated switches. This means that you don't have to get your electric drill out to fit them, and you certainly don't have to have wires hanging out the back like I've seen on many C64's.

The Slimline 64 case is a little wider than a normal case. The area behind the keyboard being lengthened. Be warned, even though this area looks as

though it might be nice to support your TV etc. on, it isn't as sturdy as it looks as a press on the top of it will show.

The Slimline 64 case is a vast improvement on the old style. It not only looks nicer but does make it a lot more comfortable in use. My only question is, why didn't someone think of it before?

ANOTHER HI-TECH 'FIRST' FROM TRILOGIC

THE SOUND SPLITTER 1

STEREO CONVERTER WITH REVERB

- Enhance the amazing sounds from your C64 & 128. Great with games - especially 'Shoot em Down' owns. Marvellous with music programs. Brilliant with basic programs.
- Super two-channel stereo effect.
- Reverberation for added depth and realism.
- Easy to use - plug in to your C64 or 128 and connect to your Hi-Fi or stereo with the lead supplied. No programming/software needed.
- Mono/Stereo and intensity controls.
- Your C64 & 128 sounds like a £500+ synthesiser - when used with any of the 'Music programs'.
- Use it with sound samplers, sound expanders etc. etc.
- Mains operated - No costly batteries to replace.

ONLY £29.95

THE SOUND SPLITTER + FOR YOUR COMMODORE 64 & 128

Now you can enjoy Sound Splitter enhancement without annoying others. The Sound Splitter + has all the features of Sound Splitter 1 plus a superb built-in headphone amplifier for use with your Walkman-type headphones, plus balance and volume controls.

School Room

We bring you the latest in educational software to make those exams just that little bit easier.

By Margaret Webb

This month I will be looking at two different sets of disk based educational software, each with its own characteristics and merits.

The first set came from Cronos Software, a small company based in Ormskirk and comprised of two mathematics programs aimed at opposite ends of the age spectrum.

Maths Trek sets out to help the junior school child to manipulate numbers and arithmetical operators. The program is set out as a board game and the child must get the best score to win. The idea of the game is to beat your opponent and to get from the start to one hundred before he does. The opponent can be either the computer or another human. In a manner similar to snakes and ladders; the game allows you to send your opponent back squares by landing on him and to move forward by landing on a designated number. Skill is a major factor in this game. The computer generates three numbers (all less than 10) and the player must use the numbers in the order given along with the arithmetic operators (each only once) to generate a sum. The idea is to create the sum which will give you the most advantageous, although not necessarily the highest, score. The game does have an addictive quality but is a little dull in presentation. More development of the graphics is really necessary to give a product which will appeal to children.

The second program, *Accounting Part 1*, is, as its title suggests, an accounting tutorial. It is aimed at 'O' and 'A' level students and those taking other similar examinations. The program acts as a simple teaching aid offering revision and self tuition. In content, you get a series of pages of information interspersed with test questions which check your grasp of the material. Whilst the program will operate on its own, it is probably best used with an appropriate text book.

Overall, these offerings from Cronos are adequate in content but they do have a couple of faults. First,

they aren't too exciting in their presentation. Computer users are becoming choosier nowadays and expect more sophisticated graphics. Because of the small market for educational software, software houses must pull out all the stops when preparing programs. The American products and many of those on the BBC have shown what can be done.

Secondly, the amount of material on the disks didn't really represent good value at £7.95. I would expect at least two programs of the size of *Maths Trek* for the asking price. With budgets being so small, schools will only buy software which gives them value for money.

Both of these faults can be easily rectified and I look forward to seeing what Cronos come up with in the future.

The second offering, presents quite a contrast. School Software, a company based in Limerick, offers a range of software for the BBC, Amstrad and 64 and, from what I have seen, it's quite meaty in content.

A wide range of subjects are covered, four of which fell through my letter box. All of the programs seen have the similar format of optional study notes combined with test questions. This allows you to decide whether you are learning or revising. Inevitably, the content is too cursory to provide sufficient detail for written exam answers and the simultaneous use of text books is mandatory.

Better Spelling is aimed at the eight to adult range. This program overcomes some of the problems discussed in this column in the October issue of *Your Commodore* and succeeds in teaching the subject quite well. There is a menu of 16 items to choose from, each dealing with a specific area. Such subjects as plurals, prefixes, silent E, tenses, particles etc. are covered in a first group of nine options. In these options, you must type in the required word. A second group of seven options covers common spelling errors. This time you

must fill in the gap in a sentence. For example, the use of to, two and too is covered as is been and being. Each test ends with a score of your performance and the option to make a hard copy of your printer. Some effort has gone into making the program attractive with the same graphical effects but it's still not quite there.

The other three packages were *Physical Geography*, *Map Work* (Britain and Ireland) and *Physics I*. All were suitable for ages for 12 years upwards. These packages are again split into a number of sections covering various topics within each subject. The use of graphics is much more in evidence and is of a better standard.

All of the School Software programs are of a decent length and give you plenty to do. I cannot comment on their value for money since the brochure I was sent didn't have any prices (it did, however, have an order form!). They are, however, good quality products which perform their purpose well.

To some extent, these packages epitomise the problem with writing software for education. On the one hand, you must have input from the teachers so that the content and method of presentation of the material is sound. And, on the other hand, you must have the abilities and creativity of the programmer to ensure that an attractive and efficient program is prepared. Whilst all of the programs discussed score quite well in the first area, they don't all do so well in the second. I feel that perhaps Cronos should particularly note this.

Notwithstanding this caveat, these products will teach you and they rate quite well against the opposition. 

TOUCHLINE

Cronos Software: PO Box 8, Ormskirk, Lancashire L39 5HH. School Software Ltd: 69, Meadowvale, Raheen, Limerick, Ireland. Tel: 061-27994.

Commodore Productivity Software Winners

Superbase is the most powerful Database System ever developed for 8 bit computers. Why? Because not only can you access its commands from menus but you can string them together with BASIC commands to form your own complete programs. Superbase can import data from and export to other programs via sequential files. In addition the C-128 version will load together with the Superscript word processor to create a completely integrated office system.

Commodore 64 disk **£49.95**
Commodore 128 disk **£69.95**

Superbase is recognised as the leading database system for Commodore computers, with more than 100,000 users of 10 national language versions worldwide. Now Dr Bruce Hunt has produced the first in-depth guide to using the Superbase system, from first steps through to advanced programming techniques. The wealth of hints, tips and practical examples makes Superbase: The Book required reading for anyone working or contemplating working with Superbase.

194 pages **£11.95**

An in-depth self-tutorial for the Commodore 64 on a two-sided disk. This menu-driven tutorial covers every aspect of your C-64 - BASIC, keyboard, sound, music, simple and advanced graphics. Quizzes test your comprehension at the end of many lessons! On-screen illustrations, sound effects and full-colour interactive graphics make learning easy and interesting. The PROFESSOR is your ONLY choice for an all-in-one, thorough tutorial about the Commodore 64!

Commodore 64 disk **£11.95**

Superscript gives you everything you need for professional word processing in one easy-to-use package. Its menu command structure puts you immediately at ease, with no complicated commands to memorise, yet Superscript combines business-style editing, spell checking, calculator, row and column arithmetic and full mail merge facilities. The phrase glossary feature enables you to store whole passages of text, or command sequences and recall them with a single key.

Commodore 64 disk **£39.95**
Commodore 128 disk **£49.95**
NOW ONLY

PractiCalc II combines a fast, easy-to-learn spreadsheet with database and word processing functions all in one powerful program. Set the width of each column individually on a spreadsheet up to 100 columns wide by 250 rows deep. With PractiCalc II you can sort information numerically or alphabetically, and carry out searches through columns or rows. Using its built-in word processing you can prepare impressive financial reports and documents with the utmost ease.

Commodore 64 disk **£39.95**
NOW ONLY

Super Diskdoc is the ultimate Commodore disk utility program, and the best protection there is for your valuable data. Zoom in on the bytes on your disk, interpret them in hex, ascii or plain English, make any changes you want, then replace them. The benefit of Super Diskdoc is the extra security it brings you. You know that in the event of an accident to your data, you have the best tool available to repair the damage.

Commodore disk **£19.95**

Bobstern Pro 64
Is packed with communications and utility features allowing users to control virtually every communications parameter likely to be encountered. It even offers adjustments and escape routes to handle some of the RS232 limitations of the Commodore 64.

- Entirely menu-driven.
- Comprehensive 140 page Users' Manual.

- Uploading/downloading of data in most popular protocols.
- Data transfers implemented between 28K memory buffer and disk. All transfers can be viewed on screen.
- Complete control over character delay, line delay and nulls during all non error-correcting transfers.
- Compatible with most modems. Modem driver is user-modifiable.
- Macros can be used to string together and store commonly-used operator sequences.
- Facilities for remote callers to take control of all DOS and transferable modes under optional password control. Fully supports auto-answer and logs incoming calls.
- Includes 10 custom character sets and implements real time clock.

The most professional comms package ever produced for the Commodore 64!

Commodore 64 disk **NOW ONLY £24.95**

Picasso's Revenge comes complete with light pen, powerful graphic software and print utility. Enjoy hours of fun creating computer art and graphics. Simply point the pen at the screen and add the colour as you go! Draw in 15 different colours using 8 brush widths. Choose from 35 textures or define your own. Zoom in for detailed work. Picasso's Revenge is compatible with most popular matrix printers and will also print colour pictures created with other graphics packages.

Letters

If there's anything you want to know or anything you want to say, just write in to this page and we'll try and oblige.

Printing cost

Many people brag about the facilities provided by their printers, but little is said about its running costs.

These days, you might easily buy a bargain printer, only to discover that you have to pay through the nose for paper and cartridges.

If you can't find a model which also prints money, perhaps you should consider the following money saving advice.

Firstly, if you are planning to buy a printer, look for one which accepts ordinary paper, printer paper can be two or three times as expensive. In this respect, the Commodore MPS 803 is a good buy, even though its typeface is not grand.

Once you've got a printer which accepts single sheets, you can save a fortune on those expensive cartridges by using carbon paper, as you would on a typewriter. Simply use the top page over and over again or print straight on to the carbon paper. In this way, you can have up to 40 pages of excellent printout on one page of carbon paper, costing a couple of pence.

Finally, for run of the mill printouts like listings, use photocopying paper which you can get for around £2 for 1000 sheets.

B. Henry Lehman, London.

Cheap and Cheer

I thought I would write and let other readers know about a nice little earner that certain people have hit upon.

There are a few companies that are advertising their great way of writing on both sides of a 1541 5¼" disk. They say it will let the 1541 ignore the read write tabs, the unpunched edge of the disk, and indeed it does do this.

The companies are asking £4 and in return they will send you the parts and instruction on how to do this.

I already knew the procedure and what parts were needed, however, I thought I'd send off just to find out what was going on.

For £4 I received a 20p resistor and the directions on how to fit it.

I'd like to inform other *Your Commodore* readers of this rip off and make my own offer. If anyone wants this

information free, then all they need to do is send me a stamped addressed envelope and I will supply the information. Please remember the s.a.e. as I am unemployed and cannot afford the postage.

James Strange, 165 Ashton Hill Lane, Droylsden, Manchester M35 6FH.

Dumpers Delight

Congratulations, *Your Commodore* and especially Mike Healey, for the Plus/4 Dumper program which appeared in a recent issue.

I actually wrote to the editorial department a short while ago requesting just such a program to dump the hi-res screen but to an MPS 803 printer. It works very well and required only one small alteration to make the text dump work also. Many thanks.

I would like to ask if there is any way to make the 803 double strike when printing text? Just the ability to disable line feed would do the trick. I can't find a way but perhaps one of *Your Commodore's* expert readers knows how to do it. E.A. Laurenti, Cheltenham.

As far as we know, it is not possible to get double strike on an MPS 803 because the printer has an auto line feed. We're glad that everybody has found the Plus/4 Dumper program so useful. If you are interested in seeing a particular type of program published, then please drop us a line with your ideas. We'll do our best to oblige but we can't promise anything.

Note

At the *Your Commodore* office we receive hundreds of letters from readers every month. We do try and answer each individually but sometimes this is impossible due to pressure of work. If you have written to us and not received a personal reply, we apologise for this but we cannot promise to reply to every item of mail we receive. If you feel that your question or letter really needs an answer, then inclusion of an s.a.e. will guarantee a reply, although this may still take time to arrive.

Computer Aided Design on the C-128 & C-64

Computer Aided Design (CAD) is an increasingly important application for computers. This book examines many of the professional design techniques in use today, giving you examples that can be demonstrated on the C-128 (in BASIC 7.0) and the C-64 (in Simons BASIC). Learn the fundamentals of CAD while developing your own CAD system - 3D drawing, reflection, duplication filling, mirror imaging, zooming, and more. Many sample programs for both the C-128 and C-64, including CADDYMAT, a complete mini-CAD system.

AB 420 310 pages **£12.95**

C-128 BASIC 7.0 Internals

The complete reference work for C-128 users wanting an all-encompassing knowledge of Commodore BASIC 7.0. Topics covered include Dataflow and program design, advanced programming techniques; menu creation, graphics programming; multi-dimensional arrays, sort routines, data management and window programming; BASIC Internals, token table, and the monitor. Included are several useful utilities. A must for BASIC programmers wanting to make fullest use of their 128's.

AB 425 350 pages **£16.95**

C-128 BASIC Training Guide

The complete reference work for C-128 users wanting complete knowledge of Commodore's BASIC 7.0. Topics covered include Data-flow and program design, advanced programming techniques; menu creation, graphics programming; multidimensional arrays, sort routines, data management and window programming; BASIC Internals, token table, and the monitor. Included are several useful utilities. A must for BASIC programmers wanting to make fullest use of their 128's.

AB 430 350 pages **£11.95**

C-128 Peeks & Pokes

Presents dozens of programming quick-hitters. Useful techniques on the operating system, stacks, pointers, keyboard, sprites, hi-res graphics in 40 and 80 column, the BASIC interpreter, 6502 and Z-80 assembly language and more.

AB 435 200 pages **£11.95**

1541 Repair & Maintenance Handbook

Here's the book you've been waiting for: it describes the 1541 drive's hardware, including all the maintenance and repair information you need to keep your disk drive operating smoothly. Included are schematics, alignment testing, quick realignment tips, error-correction hints, electronic and digital techniques. Repair your drive with ease using this excellent handbook. Large format.

AB 990 106 pages **£12.95**

Adventure Gamewriter's Handbook

This is a step-by-step guide to designing and writing your own adventure games. You'll learn the strategy behind programming adventures; motivating the players, using text and/or graphics, "saving" a game for later play, and more. Included is the complete listing for an automated adventure game generator with editor and interpreter.

AB 975 225 pages **£10.95**

Science & Engineering for the C-64

An introduction to the use of the C-64 computer in scientific applications. Describes variable types, computational accuracy, computers in science; POKES useful in solving scientific problems; various sort algorithms; bubble, quick and shell sorts. Topics include linear and nonlinear regression, CHI-square distribution, Fourier analysis, matrix calculations, more. Programs from chemistry, physics, biology, astronomy and electronics. Includes many program listings.

AB 955 340 pages **£12.95**

Printer Book for the C64 & VIC-20

Here's an in-depth handbook that explains all of the things that you can do with your '64 (or VIC-20) and a printer. Topics covered include: interfacing your printer to the computer, using secondary addresses for various printers, using printer ports and the principles of printing graphics: utilities and programs for text and graphics hardcopy, formatting program listings and more.

AB 965 340 pages **£12.95**

NEW

GEOS Inside and out

The most thorough guidebook to effectively using GEOS (Graphic Environment Operating System). The sophisticated GEOS user interface gives the Commodore 64 the power and ease of use previously found only with computers costing many times more. Whether you're a beginner or a seasoned computer user, if you use GEOS, then this book contains the information you need. **GEOS Inside and Out** gives the beginner a gentle introduction to operating GEOS. Later chapters acquaint the reader with the geoWrite and geoPaint applications, as well as GEOS accessories. One chapter is dedicated to practical uses for GEOS by running step by step through applications. **GEOS Inside and Out** contains a complete listing of **FILEMASTER**, a fantastic utility with which you can convert your own '64 programs to GEOS format. **FILEMASTER** lets you create a custom icon for the converted program, as well as its own info screen. Other topics include a useful Tips and Tricks section for applications and accessories, creating custom GEOS windows for your programs, and details about GEOS file format. Programs include a single-step simulator to display GEOS memory locations and registers in machine language, and a constant display digital clock. Optional diskette recommended.

AB 440 310 pages **£12.95**
AB 440D Optional diskette **£4.95**

Killed Until Dead

Getting fed up of watching Agatha Christie and Dorothy Sayers mysteries on the box? Have a go at the latest Accolade game and see how hard it really is to be a super sleuth.

By Anthony Heath

Five of the world's top crime writers are gathered at the Gargoyle Hotel for a festival of murder and mayhem. You are Hercule Holmes, the world's greatest detective and it's your job to prevent one of the writers committing murder.

A total of 21 cases are included in Accolade's whodunnit thriller to give you the toughest challenge of your career. Like the other Accolade games, such as *Hardball* and *Psi-5 Trading Company*, the game oozes quality with animated graphics and joystick controls to steer the sleuthing. Your first case opens with a scene of your desktop. In front of you are your files on each of the main suspects, an electronic notebook to record your findings, a phone to call up and question the five members of the Midnight Murder Club and your surveillance team that allows you to break into suspects' rooms, and monitor and tape conversations in the hotel's rooms. One thing is certain that in just 12 hours, at midnight, someone will be killed until dead.

A quick flip through your files will reveal the main characteristics of the infamous five and a few snippets that may or may not be important in the case. For example, will it help you to track down the murderer, his or her intended victim, the weapon, location and motive if you know that Sydney Meanstreet has more chins than the Hong Kong phonebook, or that Claudia Von Bulow is a part-time clairvoyant, Lord Peter Flimsey was a spectator on the playing fields of Eton, Agatha Maypole wrote the play the Lemming Trap or that Mike Stammer's favourite hobby is cleaning guns. This information may highlight some differences and conflicts but will they lead to murder?

The investigation proper gets underway as you attempt to break in to the suspects room to look for clues. To get into a room they have to be out and you have to correctly answer a murder mystery trivia question. These only have four possible answers so if you get it wrong you'll have more

chances next time. Unfortunately, you'll have to wait 10 game minutes to try again as a guard is hanging around the door. Inside the room you'll find the odd clue mixed with a healthy helping of red herrings and perhaps a note the suspect has made about the time and place of a meeting.

Now you must either monitor these meetings yourself or set up your tape surveillance to record them and gather more clues from their conversations. At last, you should be on the trail and it's time to question the suspects. Murder suspects aren't particularly chatty folk and so you must shock them into talking to you by selecting the correct fact about them from the list of four presented to you. Get it right (you'll probably discover the sordid details from the break in) and you can ask key questions about who they think is in danger, who is the killer, where the murder will take place and what the weapon will be. You can tell whether you're on the right track by the suspects reaction. If they get worried, then you should start listening. Keep the pressure on and you could find the solution. Finally, you should consult your notes that keep track of break ins, phone conversations, recorded meetings and random tip offs and then confront the would be kiler with the facts and the most likely motive and another case will be solved.

Unfortunately, it isn't that easy. In the harder cases some suspects know nothing at all, others lie and in one case I had calculated that Agatha was about to be gunned down because she had absconded with the proceeds from a contract, only to find that she gave the money back just before I was about to make my triumphant accusation. By this time it was too late to track down the real killer and the

doomed victim.

Five candidates for both murderer and victim, five weapons and nine locations provide plenty of permutations for the mysteries so it's unlikely you'll solve any by chance and ensure it'll keep you sleuthing to the very last case. **VC**

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

Boxed, with detailed instruction booklet

PRICE £15.00 (all inclusive)

NOW AVAILABLE

FIXGEN 86/7

AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1986/7. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. Yearly updates available.

POOLSWINNER with FIXGEN £16.50 (for both)

COURSEWINNER v3

THE PUNTERS COMPUTER PROGRAM

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date.

PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.

ALL PROGRAMS AVAILABLE FOR: AMSTRAD CPCs, AMSTRAD PCWs (ADD £3.00), All BBCs, All SPECTRUMS, COMMODORE 64/128, ATARI (48K+), SINCLAIR QL.

Supplied on tape (simple conversion to disc) - except PCW (on 3" disc) and QL (on microdrive)

Utility Commands

*This program supplies 128 users with many of the vital
commands missing from Basic 7.0.*

By Nagi Kanafani

When I first acquired my Commodore 128 with its great Basic 7.0, I thought that this was the Basic interpreter I had been looking for (compared to my old C64 Basic). However, studying the various commands and all their options, I discovered that Commodore had missed a small section of commands which are indispensable to the programmer. For example, the FIND routine which is very important in some programs, was excluded. Also omitted was the MERGE routine to combine programs from disk, not forgetting the OLD, sometimes known as the UNNEW routine. And last but not least, that unknown RKILL command which compresses your program by deleting all unnecessary spaces and REMarks.

Since all these valuable commands were not included, the only thing left

for me to do was to write them myself. I have actually managed to write a program which doesn't interfere with my Basic program, while still being active all of the time.

Of course it had to be in machine code but it also had to be accessible as a Basic command. I used the ERROR VECTOR which is located at \$0300 and pointed it to my own routine, which then checks the INPUT BUFFER at \$0200 if one of my commands has been entered. If not it simply returns to the original ROM routine and outputs the error. If one of the new commands has been typed then control is passed to the correct routine.

In Detail

Let's get down to details. When control is passed to the FIND routine, it first checks if there is any string given

for which it should search, if not the routine outputs SYNTAX ERROR. If the string is given, then the routine compares the program to the string and, if it is found, the line is listed. The Syntax for FIND is:

FIND <statement> - for strings which are not in quotes and
FIND "<statement>" - for strings which are in quotes.

Note: Anything which is after the first quote is included in the statement even if it is a quote.

When you are searching you can use a 'wildcard' if you don't know what character should come in that place or if you are searching for different words. The 'wildcard' cannot be used in commands since these are tokenised. The 'wildcard' is usually the left arrow key but it can be changed to

any other character in the Basic Loader or in the Assembler/Editor listing.

Here are some examples:

FIND finds all occurrences of the
GETKEY: GETKEY command.
FIND A\$: finds all occurrences of the variable A\$.
FIND finds all occurrences of the
"BASIC: word BASIC in quotes.
FIND A \$: finds all occurrences of any string-variable that starts with an A; eg: AA\$, AI\$, A1\$, A8\$.
FIND Finds all occurrences of
"H LL: words in quotes like 'HELLO', 'HALLO', 'HILLY', etc.

The MERGE routine also checks the INPUT BUFFER for a name if it is not given or it is given a wrong syntax, then the corresponding error is printed. The routine works by reading in one line at a time, storing it in the INPUT BUFFER and then using the ROM routine to insert the line into your correct program. In other words the routine acts as if lines are inputted from the keyboard, but reads them from disk. Syntax of the MERGE command is:

MERGE " <filename> "

Note: The second quote does not have to be entered. The length of the filename must not exceed 16

characters.

Examples:

MERGE "SETUP": merge the file 'SETUP'.

MERGE "*: merge the first file on disk.

The easiest command is OLD. When this routine is executed the pointers at the beginning of the Basic program, which are set to zero after a NEW command, are set to a non zero number. Then a ROM routine is used to rechain all the Basic program. The end of the program is calculated and then a CLR is performed. The syntax is:

OLD

Note: No parameters are needed!

Now comes the RKILL command. This routine, like the MERGE routine, takes quite a lot of time to finish. This is because the whole Basic program is re-entered by using the same ROM routines as the MERGE command. All the unnecessary spaces and REMarks are deleted out of the line and it is then entered. Its syntax is:

RKILL

Note: No parameters are needed!

Entering The Program

I have included two listings. One is a

Basic loader and the other is an assembler/editor listing.

In the Basic loader the machine code is entered as DATA statements and, at the end of each line, there is a checksum which should prevent typing mistakes.

First you are asked to enter the start location where the program should reside. It is usually located at \$1300 through \$16BE. This is memory that the Basic Interpreter doesn't use and unless you are certain that there is enough space elsewhere (approximately \$03BE bytes), the start location shouldn't be changed.

If, however, the program is redirected to another memory location, the Basic loader repoints all vectors to the correct location. You are then asked if you want to change the 'wildcard' (used by FIND) and whether you want to retile the commands.

The Basic loader then asks you if you want to save it. If yes, then enter the filename you want to use. When you have a copy of the machine code on disk you can load and initialise it immediately with the BOOT command (enter BOOT" < filename >").

The assembler/editor listing is for use with the assembler program found in *Your Commodore* July/September 1987 issues called Assembler 128. I have included many remarks in that listing for any advanced programmers.

**DATAKOM is a Database
NOT**

*"just another modem!"
in fact*

**it is not just a Database
IT IS
the most powerful
communications addition
to a Commodore 64-128**

**ELECTRONIC MAIL TELEX
BULLETIN BOARDS** and other
dial up services at your
fingertips.

**AUTO-DIALLING AUTO
ANSWERING SPOOLING
PRINTING TRANSMITTING
and ACCESSING FILES LOCAL
MODE facilities.**

ALL THIS AND
in the **VIEWDATA** mode your
computer becomes a **HOST**,
communicating with other
viewdata systems, downloading
text and graphics local editing.
For users of Prestel **DATAKOM**
is a full Prestel terminal
providing all the standard
software and hardware facilities.
When switched to auto-answer
the software recognises;
a. Electronic mail reception
b. Database reception and
adjusts the baud speed
accordingly.

Dealers enquiries welcomed.

A star is born— **MODULA-2** From Pecan

Looking for a compiler? Stop here!! Pecan's new Modula-2
boasts an array of features to make it the envy of its
competitors:

- Portable Program Code.
- Native Code Generation • Fast Compilation, Compact Code Files • Separate Compilation of Modules • Extended Precision and BCD Arithmetic • Event-Driven Multitasking and Process Synchronisation • Integrability with UCSD Pascal, FORTRAN-77, BASIC and Assembler • IEEE 64-Bit Floating Point Format with full 8087 support • Supports up to 16MB of Addressable Memory for Code Space • On-Line Documentation.

THE PECAN POWER SYSTEM

The force is with you! The
formidable Pecan Power System
is available at only **£99.95 exc.**
VAT and includes:-

- Advanced Systems Editor • Native Code Generator • Graphics • Filer • 8087+BCD Support • Choice of Compilers—
MODULA-2, PASCAL, FORTRAN-77, BASIC.

VERSATILITY PORTABILITY

With Pecan products there is no
need to limit yourself to one make
of hardware. Versatility is the
keyword and a system can be developed across a range of
equipment with unrivalled ease. The program code can easily
be transferred to other computers. The Power System is
available on PC DOS, MS-DOS, Amiga, Atari ST, Amstrad 1512,
Comart, Commodore 64 & 128, Macintosh, Tandy, Apple II
(including new Apple II GS), DEC Rainbow, Stride and most
popular 8/16/32 bit systems—also available for VAX Unix, and
DEC PDP II.

- Special pricing for educational establishments, dealers and
distributors—ask for details.

REVIEWS

"... Recommended based on
its superior development
environment ...
its compiling speed, and its relative polish."

PC Magazine

"... an excellent product in virtually every respect."

GEOS Expanded

Berkley Softworks has now produced an improved version of GEOS plus some utilities packages to compliment the system. We put them through their paces and found them very impressive.

By Tony Hetherington

Writers Workshop

Desk Pack 1 - Calendar

When Californian based Berkley Softworks launched *Geos* (the *Graphic Environment Operating System*) on an unsuspecting world it was met with wild enthusiasm as C64 users basked in Mac-like icons, pull down menus and trash cans.

Unfortunately, the standard *Geos* disk contained only limited software to use these icons and menus and so the enthusiasm waned and *Geos* gathered dust. Was an operating system that was to be bundled with the 64C destined for obscurity as users returned to less friendly but practical programs? No! Just as all seemed lost, Berkley has released an updated version of *Geos* and three new packages to put *Geos* to work.

Writer's Workshop not only replaces the weak *geoWrite* with a full

wordprocessor but also includes an intelligent mail merge program and text grabber so you can read documents created by other word processors. *Fontpack 1* includes 20 new fonts to liven up your letters, *geoDesk* adds a card index system and *Desk Pack 1* includes a graphics grabber that can "steal" *Print Shop*, *Print Master* and *Newsroom* artwork, an icon editor, calendar and datebook program and finally *Blackjack*.

Writer's Workshop

Like all the utilities, *Writer's Workshop* is supplied on disk along with an excellent manual complete with easy to follow worked examples in a box proudly displaying Mac like screenshots. Before you can use the

new utilities they must be installed on to a work disk. Installing a new program usually means copying over the file and including its icon into your work disk but for *Writer's Workshop* you must first key it into your *GEOS* master. Once this is done, the *Writer's* disk is permanently linked to the master and cannot be run without the correct master disk.

Geowrite 2.0 is a full wordprocessor that replaces the text handler included on the original *GEOS* disk. Standard word processing features such as double spacing, paragraph settings, headers and footers, search and replace, left, right and full justification as well as plain, bold, underline, italic, outline, subscript and superscript text styles are now available through pull down

Geo Dex

menus or single key commands. However, you can also change a single word's, line's or paragraph's font or style by just clicking it. You can format paragraphs using a joystick and print some or all of a document in rough or letter quality modes.

The problem with using a new wordprocessor is that your old but still important documents are now useless as they were written by other incompatible programs. Thanks to the text grabber utility supplied on the *Workshop* disk geoWrite 2.0 becomes the "universal" wordprocessor as it can read and convert any data file into a geoWrite 2.0 document!

Using the text grabber is simple, particularly if the document you want to convert was created using either *EasyScript*, *SpeedScript* or *Paperclip*, as a menu selection completes the whole process in a few minutes. Any other C64 document can be converted but you will then have to reformat the document.

No wordprocessor would be complete without a mailmerge program to create personalised letters from a single document. GeoMerge takes this one stage further as the original document can contain IF and ELSE conditions. Depending on key data held in a standard address file document, these conditions can be tested with the results printing or not printing words or sections of text.

GeoDex

The geoDex disk not only contains a copy of geoMerge but also an electronic card index system that appears in glorious 3D once the program is loaded. By clicking one of the letter tabs that are arranged at the

top of the cards that record is brought to the front and can be read, edited or used to create a new record.

Each record can contain a small but useful amount of information such as the person's name, address, phone number as well as a single line for added notes.

Down the side of the cards are a series of icons that lead to other options such as geoMerge, delete records, print some or all records either as address labels or just a list of phone numbers, search for a record, view a specific group or autodial any number as long as you have a modem.

Fontpack 1

Fontpack 1 contains the files for 20 new typefaces that can be used to add a

flourish of style to a geoWrite or geoPaint document.

Unfortunately, *GEOS* can only use seven fonts at any one time and each one must be individually copied to a work disk. If you want a different selection of fonts you have to copy others over to your work and rearrange the desktop so that the seven you need appear before those you don't want.

Desk Pack 1

This pack of utilities contains a graphics grabber, icon editor, date book and calendar program and another Mac tradition, Blackjack.

The graphics grabber is a spectacular utility that not only adds tremendously to the usefulness of

Graphics Grabber

Icon Editor

GEOS but also extends the flexibility of the productivity programs *Print Shop*, *Print Master* and *Newsroom*. Although fun to use, these programs have serious restrictions limiting the positioning of graphics and size and style of text. By using the text grabber GEOS can "steal" any *Print Master*, *Print Shop* or *Newsroom* graphic and store it in a photo scrap or album. This can then be altered by *geoPaint* and used by *geoWrite* to create incomparable results.

The icon editor may at first sight be just a way to customise your work disk by redesigning the desk top icons but it has a more serious application. Using this utility non GEOS programs can be converted to GEOS format, given a GEOS header, an icon and run from the deskTop by simply clicking the icon (this is the equivalent of LOAD "****",8,1).

The datebook and calendar desktop accessories will organise you by providing a 9999 year calendar that displays a month at a time on the screen. Any important dates are not only flagged by an asterisk but also linked to a page opened in a datebook.

The pages take up a full screen and can be used to store appointments and reminders.

The final program included in *Desk Pack 1* provides some light relief and is an icon driven Mac like version of *Las Vegas Blackjack*.

GEOS Updates

To add to the confusion of installation and file copying, each disk (except the fontpack) contains an updated version of the desktop (version 1.3), new input drivers to support the *Koala Pad* and some mice, although not the *Neos Mouse* bundled with the 64C, *geoWrite* 1.3 which is basically the original text handler with single key commands and a slightly improved version of *geoPaint*.

Conclusions

These three new utilities and first font pack add a new lease of life to the Mac-like operating system GEOS. Although each pack has something new to offer I found the text and

graphics grabbers to be the most useful and may be enough to persuade C64 owners to convert totally to GEOS. This is helped by the inclusion of a full wordprocessor in *geoWrite* 2.0, the added IF and IF, ELSE conditions possible in *geoMerge* and the icon editor that converts programs so they can be run from the GEOS desktop.

There's more to come, as London based First Analytical is set to continue its enthusiastic support for the system that should have been the official C64 operating system. Apart from an 80 column C128 version future releases include a 28,000 cell spreadsheet program called *geoCalc* and *geoFile* which supplies GEOS with a full database program.

The latest version of GEOS (1.3) costs £49.95 with *Writer's Workshop* a reasonable £37.50, *Desk Pack 1* £26.50 and finally, the 20 new fonts in *Font Pack 1* will cost £23.50. YC

Byting into the 6510

Moving deeper into machine code programming we get things started by creating a loop and find out how the 6510 makes decisions.

By Burghard-Henry Lehmann

Computers have established themselves as valuable tools for two main reasons. Firstly, because they are able to make 'decisions' and secondly, because they can repeat operations with precision and accuracy. Therefore they are extremely good at doing the very jobs which people find tedious.

In Basic you instruct the computer to make decisions, by using the "IF... THEN" statement. A well-known method of creating a loop in Basic is the "FOR... TO... NEXT" combination of statements.

In this article, I will explain how to do both these jobs in machine code. For this purpose we continue with the program theme we started in the last article, in which we printed a character - or output it - to the screen. Now we want to do the same thing 256 times, thus filling the first quarter of the screen.

Theory

Why only the first 256 positions and not the whole screen as well?

As I have already pointed out, the 6510 is strictly an 8-bit animal, that means, most of its registers consist of eight binary bits which allow you to enter numbers only in the range from zero to 255. Put any number larger than 255 in any of its registers, and you will get an 'overflow'. That is, instead of 1000, which we would need in order

to fill the whole screen, you will have only 232 in the register ($1000 - (3 \times 256) = 232$)!

This does not mean that we can't deal at all with larger numbers on the 6510. It only means that doing so becomes a bit more involved. Therefore, I won't deal with the procedure at this point.

Task 2

Listing 1 gives you the source file which will do the task I have set.

Please note that I have added some "empty" lines - consisting only of linenumber and semicolon - and some remarks to this listing. I did this in order to introduce you from the start to good techniques of formatting assembly lines. After all, you still want to be able to understand your program in three weeks time! And since assembly listings are much more monotonous than Basic listings, it is even more important in assembly programming to acquire good programming habits. Of course, when writing a program, you will probably be far too keen to get your ideas working to concentrate on such mundane chores as formulating a remarks. But believe me, when all the excitement has died down and your dreary job is to find a bug, you will be grateful to yourself for having followed this advice!

Incidentally, in assembly listings

the semicolon is used like the REM statement in Basic. It tells the assembler that what follows can be ignored.

In line 60 I call a routine in the Commodore Kernal (the second part of the operating system which starts at 57344) in order to clear the screen.

The assembly-instruction JSR stands for "Jump to SubRoutine" and is very similar to the Basic GOSUB command. We will deal with this instruction in more depth at a later stage, when we also will deal extensively with how to make use of the handy routines in the two ROMs of the C64 for your own programming purposes.

Labels

In Listing 1, I have also introduced a very important programming tool which all assemblers worth their salt allow you to use: labels.

A label is simply a name you stick on a certain variable, as you do in Basic. In line 30 I set the value "1024" (beginning of screen memory) to the label "SCREENMEM". I do this with another one of those pseudo-instructions which are only relevant to the assembler: EQU. This is short for equals, and in Basic you would do the same thing by writing a line like: SCREEN = 1024.

As in Basic most assemblers have certain rules concerning labels. A label

may not exceed a length of between six and nine characters (depending upon the particular assembler you are using), a label may not start with a number, the characters afterwards may not contain certain graphic characters and some assemblers do not allow you to use op-code mnemonics or pseudo-instructions within a label.

But the most important rule is, that a label may not be used twice. This makes sense, because you can't expect the assembler to assign different values to identical labels in the "eeny, meeny, miny, mo" fashion.

Labels As Jump-Values

There is an even more useful way in which labels in assembly language programming are employed.

Some Basic dialects (but not the rather poor Basic on C64) allow you to write a line, like: GOTO PRINTROUTINE. In this case "PRINTROUTINE" is the name for a variable which you have to declare, just like any other variable, at the beginning of your program with a line, like: LET PRINTROUTINE = 1000.

This is then processed like any other variable, and when the Basic interpreter arrives at the GOTO line, it finds the value 1000, takes it as a line number and jumps to it.

Now, as we have learned in the last article, the microprocessor does not deal in line numbers. Instead it deals in memory locations which it keeps track of in its program counter. In assembly listings we use line numbers only for our own benefit, to make our listings more structured, and for the benefit of the screen editor of the assembler program, so that it can insert or delete lines.

In machine code we tell the microprocessor to jump or branch to a certain location, and the assembler allows us to declare that location on the left hand side of the assembly listing in the form of a label.

And here an assembler makes life really easy for us: In line 90 I have declared the label PRINTLOOP by throwing it out on the left hand side. I do not necessarily know which location the following instruction is at - unless I go to all the trouble of counting it out. But there is no need for that because I have set the overall start location in the first line to 49152, and this is all that's needed. The assembler does the rest.

When it comes to the label PRINTLOOP, it will take the current location address, which it has arrived at by assembling the preceding lines, set it to the label PRINTLOOP and store the label and its value in a special area of memory, called the symbol table.

Then it goes on assembling as usual, until it comes to line 140 in our program. There it finds a branch-instruction (more about this later) and a label which it will promptly identify as the label which it previously has stored in the symbol table. Now all it has to do is to recover the value and write that as the jump - or branch - destination into the next location, and the microprocessor will know, where to jump to.

All this time we were on easy street. We did not have to remember yet another number. We did not even have to calculate that number! Instead we were able to use a nice, memorable word of our own choice, which even serves us as a sort of remark!

Compare that with the unstructured ways of most Basic dialects, and you will understand why yours truly prefers to program in assembly language!

Index Registers

In line 80 of Listing 1 we are introduced to the X-register which is the second of the three programmable registers of the 6510. The third is the Y-register. Both the X-register and the Y-register are called index registers and are used in similar ways.

Like the A-register or accumulator the index registers are 8-bit registers, that is, they are able to hold numbers in the range of zero to 255. But unlike the A-register, the index registers are not used for adding or subtracting numbers. In fact, all you can do with them, besides loading or unloading them, is increment or decrement their contents by one. This makes them quite unsuitable for arithmetical operations. Instead the index registers are used as a kind of moving pointer, which allows the programmer to define the input or output addresses in a flexible way.

But instead of confusing you with more clever definitions, let's look again at the listing of our program example:

In line 80 I load the X-register with zero, using a similar input instruction to the LDA instruction which we have introduced in the last article. LDX

stands for Load the X-register with...

Our task is, as you will remember, to print some "A"s at the first 256 positions of the screen. We could do this job the hard way by making use of what we have learned already and writing a program something like this:

```
10 LDA 1
20 STA 1024
30 STA 1025
40 STA 1026
etc.
```

This is of course an absurdly laborious way of doing it and would require 256 lines of assembly in order to fill the 256 screen positions.

You may already have an inkling of what the answer to our problem might be - at least in Basic. We have to construct some kind of loop which starts off with 1024 and increments this value by one with each pass through the loop.

This is where the X- or index register comes in. In line 80, the X-register is loaded with zero. Then the loop is entered, which we may name after the label PRINTLOOP.

In line 90, the A-register is loaded with one, which stands of course for the letter "A". This needs to be output to the screen memory locations, starting from 1024 (here described with the label SCREENMEMORY).

The X after the comma stands for the X-register, and if you substitute that comma in your mind for a +, you know at once, what this construction is all about. We instruct the microprocessor to add the value in the X-register to the absolute address given after STA. And since the value in the X-register at this point is zero, the microprocessor will arrive at the location 1024+0=1024.

In line 130, the X-register is incremented by one, using the very simple instruction INX, which stands for INcrement the contents of the X-register (by one)".

In line 140, the "PRINTLOOP" is closed by using a conditional branch instruction (more about this in a minute), which has in this example, a very similar effect to the Basic command: IF X < > 0 THEN GOTO 90.

The program now loops back to line 90. In line 100, the contents of the

X-register are again added to the value 1024, which is hiding behind the label SCREENMEM. And since the X-register now contains one, the microprocessor calculates the output address as $1024+1=1025$. Result: it outputs the letter A to the next screen position.

The confusing bit of the instruction STA SCREENMEM,X for the novice is the comma after SCREENMEM. Above I suggested for clarification to substitute this comma in your mind with a plus sign. This brings us to the question: why can't a plus sign be used in the first place?

There are indeed occasions where you use a plus sign, but this, even though serving a similar function, constitutes a different situation, as far as the assembler is concerned: LDA SCREENMEM,X is to be translated into a full-blown machine code instruction which the microprocessor will calculate, as I have described above, and then execute.

On the other hand, LDA SCREENMEM+1, for example, which is quite legitimate with most assemblers, will in practice be treated differently. It will be calculated by the assembler and not by the microprocessor. All the microprocessor will get, is 1025 and before that the op-code 141, and that, as you will recognise from the assembler listing I gave you in the last article, is good old absolute addressing.

In the next two lines (110 and 120) a similar command with the colour memory makes the "A"s visible on the screen for those of you who, like myself, still have the old ROM.

Branch-Instructions

In line 140 we close our loop by using a so-called relative branch-instruction.

BNE stands for "Branch if Not Equal" and is a sort of GOTO combined with an IF... THEN instruction. As a matter of fact, in Basic you might put the whole thing in a line like this: IF X < > 0 THEN GOTO...

"Relative" means, that the length of the jump and the direction is defined in rather a special way. Instead of giving the full destination address to the microprocessor, the distance between the branch-instruction and the destination, where the branch is going to, is given in bytes.

In our program this distance is 13 bytes long, and that includes the branch-instruction itself, since the program counter of the 6510 is always pointing at the next instruction (in our case RTS) when the whole instruction is executed.

And since we have to branch (or jump) backwards this is subtracted from 256, giving 243. This is called a negative number in machine code terms, even though, strictly speaking there are no negative numbers in machine coding. But in order to be able at least to imitate negative numbers, one uses the rather strange convention of splitting the available 256 numbers in a byte into two and calls number zero to 127 positive and numbers 128 to 255 negative.

These conventions are rather confusing to the novice, because at school we all learned that a negative number has a minus sign in front of it. Now we learn that it is a number larger than 127.

What's it all about?

When we learned algebra at school, we dealt with negative and positive numbers of any size, that is numbers in the range of minus infinity to plus infinity. Such a range is impractical for an 8-bit microprocessor which can only deal with numbers in the range of zero to 255 (even though by programming it the right way, you can make it deal with practically any number, positive as well as negative).

And since a microprocessor hasn't got a register that shows if a number is positive or negative (that would be a waste of valuable ship-space), we now have to learn the convention that under certain circumstances, quite arbitrarily, numbers in the range of zero to 127 are said to be positive, while numbers in the range of 128 to 255 are said to be negative. Just because it suits micro-technology.

As far as our branch-instructions are concerned, this means of course, that they are limited to 128 byte jumps either way. If you want to jump any further than that, you have to use a combination of a relative branch instruction and an absolute jump-instruction, which allows you to jump from anywhere to anywhere in the computer.

Since these jump-instructions are so simple, we might as well include

them there: JMP 50000, for example, stands for "JUMP to location 50000".

But why use relative branch instructions at all and not absolute jumps, as described above?

Relative jumps need only two bytes to give the instruction (the instruction itself and the "offset", as it is called, which requires only one byte), while absolute jumps require three bytes (instruction plus low byte plus high byte).

Computers like the C64 haven't got an unlimited amount of RAM, and in a very long machine code program those saved bytes add up very quickly, as you will find out.

Furthermore, if you want a jump with a condition attached to it, the 6510, ever the simple creature, does not support any conditional absolute jumps.

The Processor Status Register

This brings me neatly to the last thing we want to deal with in this article. The conditional aspect of the branch-instruction BNE, which we've used in line 140 of our program.

The microprocessor, as we have learned, is the real computer, and must have some inbuilt facility to make decisions.

This decision-making register, if you like, is called the Processor Status Register (PS for short) or more commonly the flag register.

Strictly speaking it's not a decision-making register at all, but a sort of electronic notepad which is updated every time the 6510 has executed an instruction.

It's very simple, really: Like most registers in the 6510 the PS-register is just another location consisting of eight binary bits. Those eight binary bits make up any number in the range between zero and 255, but, unlike the other registers, the whole number isn't of any interest here. Instead the eight binary bits are treated separately and a special function is assigned to each of them.

This special function is called a flag, and like any other binary bits there are two states in which you can find a flag: It can either be set (=1) or it can be clear (=0). If the flag is set, then we say, that the condition, which is attached to this particular flag is met (Yes). If, on the other hand, the flag is clear, then we say, that the condition is not met (No).

Different flags are tied to different conditions: The most often used flag of the 6510 is the zero-flag. It tells if a result of an input or output operation or an arithmetical operation is zero or not zero.

Most of the instructions for the 6510 have an influence on the zero-flag. If, for example, you load the accumulator with zero, the zero-flag will be set, because the condition of the flag is being met. If you load the accumulator with any number in the range from one to 255, the zero-flag will be cleared, because now the condition of the flag is not met. Equally, if you subtract 10 from 10, the flag again will be set while, if you add 10 plus 10, the flag will be cleared.

The slightly confusing aspect of the zero-flag is that it is SET if the result is zero and that it is CLEAR if the result is not zero! So, remember this well!

The use of all this becomes clear in our program. We start off with the x-register containing zero, and with each pass through our loop, we increment x by one. This means of course, that the content in x is always not zero or greater than zero, and that in turn results in the program branching back to PRINTLOOP, because the BNE-instruction implies: "Branch, if the result is not equal, that is, if the zero-flag is not set."

The moment the zero-flag was set, the microprocessor would continue in a straight line and end up with the RTS-instruction in line 160, and that means, of course, that our program is finished.

When does x actually become zero, when we are constantly adding one to it?

It becomes zero the moment the full capacity of the 8-bit x-register has been reached. And this happens, of course, when we add $1+255=256$, if you include the zero as one usually does in computers. Because then, like the mileage counter in a car, the register starts from zero again, and this means, that the zero-flag will be set, the condition of the BNE-instruction is not being met any more and the 6510 zooms straight through to the exit in line 160.

Incidentally, of the eight flag-bits in the PS-register, two are never used, and from the remaining six bits, only two (or perhaps three) are used regularly in program applications. The other three bits are only used in ever specialised applications, and it will be

Figure 1

LDA = Load the accumulator (or A-register) with . . . (Input)
 STA = Store the contents of the accumulator in . . . (Output)
 LDX = Load the x-register with . . . (Input)
 STX = Store the contents of the x-register in . . . (Output)
 INX = Increment the contents of the x-register (by one)
 DEX = Decrement the contents of the x-register (by one)
 LDY = Load the Y-register with . . . (Input)
 STY = Store the contents of the y-register in . . . (Output)
 INY = Increment the contents of the y-register (by one)
 DEY = Decrement the contents of the Y-register (by one)
 JSR = Jump to Subroutine
 RTS = Return from subroutine
 JMP = Jump to location . . .
 BNE = Branch if result is Not Equal - if the zero-flag is NOT set.

a long, long time, before you use any of them - if you ever do.

Finally

In Figure 1 is a list of all the op-codes I have introduced so far and their full meaning. I also add most of the op-codes concerning the x-register and the y-register. In the context of what we have dealt with in this article, the Y-register does exactly the same thing as the x-register. As a matter of fact, in Listing 1 I could have used Y instead of X.

Listing 2 gives you the Basic

equivalent of our machine code program. I thought I might add this, so that you can have a practical demonstration of the difference in speed between Basic and machine code.

Next time you might be able to impress your friends even more because then we will expand on our programming theme one final step further and fill the whole screen. By then you will already have been introduced to the most widely used instructions of the 6510 and might even be able to start writing your own programs.

TOTAL BACK-UP POWER CBM 64/128

PERIPHERALS..THE FINAL FRONTIER..OUR MISSION..TO BOLDLY GO WHERE NO OTHER UTILITIES HAVE GONE BEFORE

CAPTAIN'S LOG...THE TOTAL SOLUTION TO ALL YOUR BACK-UP NEEDS... THE ULTIMATE BACK-UP CARTRIDGE HERE NOW !!

REPORT ON FINDINGS

Action Replay Mk III is more powerful, more friendly and will back up more programs than any competing utility by taking a 'Snapshot' of the program in memory so it doesn't matter how it was loaded... from disk or tape, at normal or turbo speeds... the results are the same - Perfect!! Amazing!!!

STARBASE UPDATE

- Simple to use: just press the button and make a complete backup: Tape to Tape, Tape to Disk, Disk to Disk, Disk to Tape. - THE PROCESS IS AUTOMATIC - JUST GIVE THE BACKUP A NAME.
- All backups will reload at turbo speed independently of the cartridge.
- Dual speed tape turbo system. Programs can load up to 3 times faster than commercial turbos - that's over 10 times normal Commodore speed.

- Freeze the action then view the program with the monitor feature. Add pokes for infinite lives etc. Then restart the game or backup - ideal for customised versions of your games.
- Picture Save. Save any multi-colour, hires screen to disk or tape. Compatible with Blazing Paddles, Koala, Slideshow etc.
- Fully compatible with 1541, 1541C, 1570, 1571, and ehancer or any CBM compatible data recorder.
- For C64, 64C, 128, 128D (in 64 mode).
- Unique Sprite Monitor. Freeze the Action and view all the Sprites, watch the animations scroll across the screen. Save Sprites to disk or tape. Customise your games by loading sprites from one game to another - then restart the program or make a backup.

- Compatible with fast DOS and Turbo ROM systems.
- Backup process in turbo speed - faster than any rivals.
- Special compacting techniques. Each program is saved as a single file.
- Transfers multistage tape programs to disk - more than any other cartridge - even the extra stages are turbo load - a unique feature.
- Sprite Killer! make yourself indestructible by disabling Sprite collisions in games.
- Fast disk format (20 secs).
- Built-in unstoppable reset button.

ONLY
£29.99

**ACTION
REPLAY
MK III**

PLUS Built In FASTLOADER

Action Replay III even has a built in disk fast loader which speeds up loading 5 times. Uses no memory - invisible to the system. You could pay £20 alone for this feature.

WARP 25 BREAKS THROUGH THE 10 SECOND BARRIER!

Action Replay III now comes with an amazing new Disk Bootloader that will reload your backups at TWENTY FIVE TIMES normal speed. The fastest disk turbo yet devised!! There are NO CATCHES. WARP*25 works with ALL your games. Works with any disk drive. No preload required - No hardware modifications necessary - No user knowledge required - programs load INDEPENDENTLY. LOADING TIME - 9.8 SECONDS (for a typical game saved by WARP*25 in conjunction with ACTION REPLAY III). This time is for the COMPLETE load process from start to finish. Reload is entirely INDEPENDENT of the cartridge or any other hardware. Compare these (accurate!) figures for some rival backup systems:

SYSTEM	LOAD TIME	PROGRAMS PER DISK	CARTRIDGE REQUIRED?
ACTION REPLAY MK III SAVED WITH NORMAL TURBO	25 SECS	THREE	NO
ACTION REPLAY MK III SAVED WITH WARP*25	9.8 SECS	THREE	NO
FREEZE FRAME (MK IV)	40 SECS	TWO OR THREE	NO
FREEZE FRAME (LAZER)	25 SECS	TWO	YES
EXPERT SYSTEM	30 SECS	THREE	NO

All purchasers of Action Replay III will receive WARP*25 FREE with their cartridge. Existing Action Replay III owners can obtain WARP*25 Disk turbo by sending £2.50. post free. (No need to send your cartridge). OR obtain it FREE on the Enhancement Disk (£7.95).

THE ACTION REPLAY ENHANCEMENT DISK

The best collection of tape to disk transfer routines for nonstandard multiload programs (eg Dragons Lair I and II, Championship Wrestling, Summer Games, Ace of Aces, Gauntlet, Supercycle, Marble Madness, World Games). 31 titles in all. Uses our unique parameter system. No user knowledge required. Turbo load throughout. NOTE: Standard cartridge transfers normal multiloader's eg Winter Games etc. etc. Disk includes file copy and disk backup utilities. PRICE £7.95 with FREE! Multicolour Slideshow for display of loading screens, hires pictures etc. saved by Action Replay. Great entertainment!

PERFORMANCE GUARANTEE

100% Success? Rival Claims? Who's Kidding Who? Action Replay Mk III will backup any program which any other cartridge can backup - and more! It also has an unmatched range of features. Consider 'Freeze-Frame' for example, which uses more disk space, saves at slower speed, has slower tape loader, has no built in disk fastloader, no picture, Sprite or restart features and costs £10 more than Action Replay. So who's kidding who? Buy Action Replay Mk III. If you find that it does not live up to our claims return it within 7 days of receipt and your money will be refunded.

USUALLY SAME DAY DESPATCH ON ALL ORDERS.

DATTEL ELECTRONICS

DISK DEMON £64.99 POST FREE

"The world's fastest parallel operating system"

- ☐ Loads a typical 202 block program file in under 3 seconds!
- ☐ 60x faster load (PRG files).
- ☐ 25x faster load (SEQ files).
- ☐ 20x faster save (PRG files).
- ☐ 20x faster save (SEQ files).

PLUS AN ADVANCED COMMAND STRUCTURE INCLUDING:

- ☐ Fast format -- up to 40 tracks (749 blocks).
- ☐ 16 function keys: list, run, load, directory, format, save, old, verify, etc.
- ☐ Flood will fastload files up to 250 blocks (other similar systems will only cope with 202 blocks).
- ☐ Number conversion. ☐ Reset.
- ☐ Unique built in file copier will copy files up to 250 blocks like lightning -- multiple copy options -- perfect for copying Action Replay files.
- ☐ Highly compatible with commercial software -- can be switched out for non compatible programs.
- ☐ Perfect for use with Action Replay 3 -- a typical AR3 backup will reload in about 3 seconds -- yes 3 seconds!
- ☐ Speeds up other DOS functions including verify, scratch etc.
- ☐ Screen on or off during loading.
- ☐ Enhanced command set -- over 30 new commands.
- ☐ Easily fitted -- Disk Demon plugs inside the 1541 and the new operating system chip plugs inside the C64/128. Fitting takes only minutes and usually requires no soldering.
- ☐ User port throughput supplied free -- you could pay \$15.00 for this alone.
- ☐ Supplied complete -- no more to buy.

FAST HACK'EM™

The Ultimate Disk Copier/Nibbler for C64/128

- ☐ MULTI-MODULE SYSTEM -- ALL ON ONE DISK
- ☐ SINGLE 1541 MODULE
- AUTO NIBBLER: Copy an entire protected disk in 3 minutes. Automatically senses type of protection and treats it as normal data to produce working copy.
- NIBBLER: Copy an entire disk in 2 minutes. As above but parameters can be set manually.
- FAST COPY: Copy a disk in under 2 minutes.
- FILE COPY: Copy and file in 9 seconds.
- ☐ 1541 PARAMETERS MODULE
- FAT TRACKER: Fat tracks are amongst the latest forms of protection. This mode allows you to produce a fat track on the disk.
- ☐ SINGLE 1571 DRIVE (64 OR 128 MODE)
- FAST COPY: Entire 1571 disk in under 1 minute.
- SINGLE OR BOTH SIDES: Will copy C64 or true 128 software.
- C64 or 128 modes.

This is the module that gives Fast Hack'em its power. The parameters module contains dozens of "Parameter Keys" that are used to unlock those heavily protected programs. Each parameter is designed for a particular software brand or even a particular program. Other copy programs may make strong claims, but without special parameters they just can't cope. Datel will be offering updates to Fast Hack'em on a quarterly basis, featuring 20-50 new parameters plus other improvements as they're made. Prices to be 26 plus old disk.

- ☐ 1541 PARAMETERS MODULE
- AUTO NIBBLER: Copy an entire unprotected disk in under 1 minute. Features auto track/sector analyzer.
- FAST COPY: Copy entire disk in 36 seconds with verify.
- AUTOMATIC FASTCOPY: As above but with completely automatic operation. In fact once set up doesn't even need the computer. A must for duplicating disks on a large scale.

ONLY £19.99

DISKMATE II

The Disk Utility Cartridge

- ☐ Disk fastload cartridge.
- ☐ Up to 6 times faster.
- ☐ Fast save. ☐ Fast format (10 secs).
- ☐ Improved DOS -- single stroke commands -- load/save/dir/old etc.
- ☐ Redefined function keys for fast operation of common commands.
- ☐ Powerful toolkit commands including: old/delete/merge/copy/append/autonum/linesave etc.
- ☐ Plus a full machine code monitor -- too many features to list but it has them all!
- ☐ Special switching techniques make Diskmate invisible to the system. Therefore it is a more compatible fastloader than other types.
- ☐ Diskmate II is \$14.99.

Special Offer!!

Diskmate II can be purchased on the same cartridge as Action Replay II for **ONLY £39.99**

MIDI 64

A Full Midi Interface for the 64/128 at a realistic price

- ☐ MIDI in. ☐ MIDI thru. ☐ 2 x MIDI out.
- ☐ Compatible with most leading software packages including: Sell, JMS, Advanced Music System, Joreth, Steinburg etc.

ONLY £29.99

MOUSE

- ☐ CBM 64/128 mouse.
- ☐ Wide compatibility with software including: Blazing Paddles.
- ☐ Works by mimicking joystick so will work in any joystick application including graphic packages only designed for joystick.
- ☐ Functions on either joystick port.
- ☐ Optical system operation.

ONLY £24.99

CHIPS

- ☐ 27128 **£3.00 EACH**
- ☐ 27256 **£4.50 EACH**

CARTRIDGE DEVELOPMENT SYSTEM

- ☐ All the necessary parts to produce an 8K/16K auto-start cartridge.
- ☐ Top quality PCB. ☐ Injection moulded case.
- ☐ Reset switch. ☐ 16K EPROM.
- ☐ "Cartridge Handbook" gives full details and tips on building and configuring the cartridge for many uses.

ONLY £12.99

complete with handbook

UNITS 8/9, DEWSBURY ROAD, FENTON INDUSTRIAL ESTATE
FENTON, STOKE-ON-TRENT

TEL: 0782 273815 TLX:

DATEL ELECTRONICS

3 SLOT MOTHERBOARD

Save wear and tear on your Expansion Port

- ☐ Accepts 3 cartridges.
- ☐ Onboard safety fuse.
- ☐ Switch in/out any slot.
- ☐ High grade PCB.
- ☐ Fully buffered.
- ☐ Reset button.

ONLY £16.99

DATA RECORDER

- ☐ Quality Commodore compatible data recorder.
- ☐ Pause control.
- ☐ Suitable for 64/128.
- ☐ Counter.
- ☐ Send now for quick delivery.

ONLY £24.99

SMART CART

Now you can have an 8K or 32K cartridge that you program like RAM then acts like ROM!

- ☐ 8K or 32K pseudo ROM.
- ☐ Battery backed to last up to 5 years (lithium battery).
- ☐ Simply load the program you require - then flick the switch. The cartridge can then be removed just like a ROM cartridge.

- ☐ Make your own cartridges including autostart types - without an EPROM burner.
- ☐ Can be switched on or off board via software.

- ☐ I/O 2 slot open for special programming techniques.

- ☐ 32K version has 4 x 8K pages.

- ☐ Some knowledge of M/C is helpful - but full instruction are provided.

8K VERSION £14.99
32K VERSION £29.99

SMARTCART UTILITIES

A series of utility programs for use with Smartcart. Simply load in the program and you have a powerful cartridge. When you have a different requirement - load in another program and you have a new cartridge. The process takes seconds, and can be repeated any number of times.

We intend to release a range of programs. The first available are:

DISKMATE II

- ☐ all the features of Diskmate II (see ad).
- Loaded in seconds - with full instructions. **ONLY £9.99**

PRINTER IV

Now you can turn your MPS 801 into 4 printers in one!!

- ☐ Alternative character set ROM - fitted in seconds.
- ☐ All four sets have true descenders.
- ☐ 100% compatible with all software.
- ☐ Descender. ☐ Eclipse.
- ☐ Scribe. ☐ Future.
- ☐ Choose any set at the flick of a switch.

"For anyone who uses their printer often this chip is a must. It's quick and easy to use and the end results are impressive" - Your Commodore, Jan 87.

ONLY £19.99

TURBO ROM II

Turbo Rom II is a replacement for the actual kernal inside your 64. It provides superfast load/save routines.

- ☐ Loads most programs at 5-6 times normal speed.
- ☐ Saves at 5-6 times normal.
- ☐ Improved DOS support including 10 sec format.
- ☐ Programmed function keys - load, directory, old, etc.
- ☐ Return to normal kernal at flick of a switch.
- ☐ FCOPY - 250 block file copier.
- ☐ FLOAD - special I/O loader.
- ☐ Plus lots more.
- ☐ Fitted in minutes - no soldering usually required. (On some 64's the old ROM may have to be desoldered).

ONLY £14.99

BLAZING PADDLES

A complete lightpen/graphics illustrator package.

- ☐ A fully icon/menu driven graphics package of a calibre which should cost much more.
- ☐ Complete with a fibre optical lightpen system for pin point accuracy.
- ☐ Multi feature software including:
 - Range of brushes • Airbrush • Rectangle • Circle • Rubberbanding • Lines • Freehand
 - Zoom mode • Printer dump • Load/save • Advanced colour mixing - over 200 hues!!
 - Cut and paste allows shapes/windows/pictures to be saved to/from tape/disk.
- ☐ Blazing Paddles will also work with many other input devices including: Joysticks, Mice, Graphics Tablets, Trackball etc.
- ☐ Pictures can be saved from Action Replay and edited with Blazing Paddles.

Complete Blazing Paddles & Lightpen **ONLY £24.99**

Blazing Paddles available separately for **£12.99**

TOOLKIT IV

The ultimate disk toolkit for the 1540/1541

- ☐ A disk toolkit is an absolute must for the serious disk hacker. Toolkit IV has more features than most for less.

- ☐ DISK DOCTOR V2 - Read and write any track and sector including extra and renumbered tracks. Repair damaged sectors. Look underneath read errors.

- ☐ HEADER/GAP EDITOR - Decodes and displays ALL header information including off bytes and header gap. Rewrite the entire header and header gap. Renumber sectors. Also edit any sector tail gap.

- ☐ DISK LOOK - Sort directory. Recover lost files. Display file start/end addresses. Disassemble any file program directly from the disk to SCREEN or PRINTER including undocumented opcodes. Edit Ram. Much, much more.

- ☐ FILE COMPACTOR - Can compact machine programs by up to 50%. Saves disk space. Compacted programs run as normal.

- ☐ FAST DISK COPY - Copy an entire disk in 2 minutes or less using single 1541.

- ☐ FAST FILE COPY - Selective file copy. Works at up to 6 times normal speed.

- ☐ FORMATTER - 10 second format an entire disk or format any individual track or half track 0 to 41. Redefine any of 30 parameters to create or recreate unique disk formats.

- ☐ ERROR EDIT - Quickly find and recreate all read errors including extra and renumbered tracks or sectors and half tracks from 0 to 41. Even recreates data under errors and allows you to redefine any necessary parameters.

ONLY £9.99

RAM DISK

- ☐ Turn your Smart Cart into a 32K RAM/disk.
- ☐ 32K of instant storage area for files/programs.
- ☐ Load/save instantly.
- ☐ Disk type commands: load, save, directory, scratch.
- ☐ Program data retained when computer is switched off!
- ☐ Full command set with instructions.

ONLY £9.99

DIGITAL SOUND SAMPLER

- ☐ The new sampler allows you to record any sound digitally into memory and then replay it with astounding effects.
- ☐ Playback forwards/backwards with echo/reverb/ring modulation etc.
- ☐ Now with full sound editing module to produce outstanding effects.
- ☐ Full 8 bit D to A and ADC conversion.
- ☐ MIDI compatible with suitable interface. (I.e. Datal unit for £29.99, see ad).
- ☐ Live effects menu includes real time display of waveforms.
- ☐ Line in/mic in/line out/feedback controls.
- ☐ Powerful sequencer with editing features.
- ☐ Load/save sample.
- ☐ Up to 8 samples in memory at one time.
- ☐ Tape or disk (please state).
- ☐ Complete software/hardware package **£49.99**
- ☐ Com-Drum software is available separately at **£9.99** to turn your Sampler II into a Com-Drum system as well as a sampling system.

COM-DRUM Digital Drum System

- ☐ Now you can turn your computer into a digital drum system. ☐ Hardware/software package.
- ☐ 8 digital drum sounds in memory at one time.
- ☐ Complete with 3 drum kits.
- ☐ Real drum sounds - not synthesised.
- ☐ Create superb drum rhythms with real and step time. ☐ Full editing. ☐ Menu driven.
- ☐ Output to hi-fi or through tv speaker.
- ☐ Load/save facilities. (state tape or disk)

ONLY £29.99

COM-DRUM EDITOR

- ☐ 24 drum sounds supplied on disk to enable you to construct your own drum kit.
- ☐ Re-arrange sounds supplied with a Com-Drum to make new kits.
- ☐ With sound sampler hardware you can record your own kits. ☐ Load/save facilities.

ONLY £4.99 disk only

ROBOTEK 64 Model & Robot Control made easy

- ☐ Robotek 64 is a comprehensive hardware/software package which enables you to connect your 64/128 to the outside world.
- ☐ 4 output channels - each with onboard relay
- ☐ 4 input channels - each fully buffered TTL level sensing.
- ☐ Analogue input with full 8 bit conversion.

- ☐ Voice input for voice control.
- ☐ Software features: test mode/analogue measurement/voice activate/digital readout etc.
- ☐ Excellent value! **ONLY £39.99**

including hardware/software/mic etc. (State tape or disk)

Plus/4 Software Offer

Do you want to use some of our programs but can't afford the time to type them in? Our latest software offer comes to the rescue.

Due to the great length and complexity of the programs that are published in *Your Commodore*, many people find that once they have typed them in they do not work. Usually, this is not the fault of the magazine but rather due to the program being typed in incorrectly.

To help readers, we do provide a *Software for Sale* service that makes all of the software from each month available on disk or cassette. Unfortunately because of duplication problems we are only able to provide C16 and Plus/4 programs on our monthly disk. Now, however we are able to produce our latest Plus/4 and C16 Software offer for both disk and tape users.

Documentation

All the programs that are on the tape are from recent issues of *Your Commodore*. Should you not happen to have access to any of the relevant articles then you can purchase back issues of the magazine from:

Infonet Ltd: Times House, 179 The Marlowes, Hemel Hempstead, Herts HP1 1BB. Tel: (0442) 48435.

The cost of a back issue is £1.50 including postage and packing.

What Do You Get?

So just what is on the latest Software cassette or disk?

Word-Pro Add-On

This program is for use with the in-built wordprocessing software on a Plus/4. The program produces descenders on an MPS 801 or 803 printer. Both of which don't usually print descenders below the level of all of the other characters. Using descenders gives your letters etc. a much more professional feel.

This program will only work with a disk drive for LOAD, SAVE etc. You can however still use the software for typing text though you will not be able to SAVE any information.

Spelling Checker

Another useful addition to the in-built wordprocessor on the Plus/4. This program works in conjunction with a disk drive, NOT TAPE, and will build up its own dictionary of words as you use it. The program will go through any text file that you have created and highlight any words that are not in the dictionary so that you can correct them if the spelling is wrong or tell the program to add the word to its dictionary if the spelling is correct.

Cribbage

If you've ever played cribbage then you'll know just what an addictive game it is. If you haven't then try our Plus/4 version of the game.

This computer version of the popular card game lets you battle it out

with the computer rather than an other player.

Lower Case Graphics

Anyone familiar with the C16 or Plus/4 will know that there are two character sets available, an upper case/graphics set and a lower case/upper case set. When it comes to graphics modes however, you are only allowed to use the upper case set.

This short program demonstrates how you can access the lowercase set while in a graphics mode improving the way that your graphic screens look.

Character Editor

This character editor allows you to design your own characters with ease and save them on to tape or disk for use at a later date within your own programs.

Also included on the cassette or disk are a number of different character sets that you can use as they are or modify using the editor. There is even a program that explains just how you get about using your own character sets within your own programs.

Dual Programming

This program allows you to have more than one program in the memory of your Plus/4 at one time. Switching between the programs is simply a matter of pressing a couple of keys.

This Month

Not only are all of the above programs available on the tape or disk but all of the programs in this issue of the magazine will also be placed on it.

How Much Do They Cost?

The price of the software is £4.00 for cassette and £6.00 for a disk.

Orders should be sent to the address on the order form for readers services NOT to the editorial address.

Orders should be accompanied by

a cheque or postal order for the correct amount made payable to *Argus Specialist Publications*.

We welcome orders from our overseas readers. However we do have to add a further £1.00 in order to cover the increased postage charges.

C16's and Memory Expansion

The C16 and Plus/4 computers are almost identical, except for the fact that the C16 has far less memory than the Plus/4. This compatibility means that programs for one of these computers will usually work on the other computer if enough memory is available.

A number of companies produce memory expansion cartridges for the C16 that expand its memory to varying degrees. If you have one of these cartridges then all of the above programs should work with the C16, except of course, those that use the Plus/4's built in software.

C16/PLUS 4 Centre

C16/4 REFERENCE BOOK £7.95

The book lays special emphasis on the graphics, sound, music and machine code programming. The graphics cover standard, multi colour, high resolution bit mapping, soft scrolling and raster interrupt. Its coverage of machine code is extensive and gives full information regarding KERNEL routines and how to use them in your own programs. The book gives complete memory map, 7501 processor commands, C64-C16 comparison chart to enable conversions and the all important KERNEL jump table. The subject under discussion is explained lucidly and illustrated by examples, often with line by line explanation.

64K RAM PACK £39.95

Extends to C16 memory to 64K to enable you to play PLUS 4 games.

TURBO PLUS

Cartridge £19.95

All cassette functions LOAD, SAVE, VERIFY and MERGE, run approximately 10 times faster-Basic or Machine Code. A number of additional commands like CHANGE, DMERGE, DUMP, FIND, MERGE, etc. are provided. SCROLLER lets you scroll basic listings forward and backward using the cursor keys (even within windows). PLUS 4 expansion allows three out of four PLUS 4 built in programs (Graphics, Word Processing and Calculations) to be used with cassette player. The software fault in the data filing system using more than 255 entries is also rectified.

PAUSE PLUS

Cartridge £29.95

The cartridge will allow you to stop almost all games and let you dump the picture on the screen to a Commodore compatible printer. The facility to transfer the software to a disc or tape is also provided.

MICRO TEXT

Cartridge £12.95

*Powerful WORD PROCESSOR for C16 and PLUS 4 owners.
*100% machine code program for fast response.
*JUSTIFY left and right. CENTRE text.
*DELETE or INSERT lines or characters.
*WORDSEARCH and REPLACE facility.
*Semi-automatic word splitting facility.
*Function keys can be assigned to most common used words.
*LOAD/SAVE to type or disc.

MICRO CALC

Cartridge £12.95

*Powerful 100% machine code SPREAD SHEET program.
*Jump to any cell on the sheet.
*REPLICATE facility.
*INSERT/DELETE rows or columns.
*Process the whole sheet calculation automatically or cell by cell.
*Arithmetic and indices functions.
*Sum or mean of rows or columns.
*Lowest or highest value in any column or row.
*Print whole or part of the spread sheet.
*Justify Left and Right for format printing.
*LOAD/SAVE to tape or disc.
*Assign function keys to most common used text.

MICRO BASE

Cartridge £12.95

*A universal DATA BASE program to keep addresses, records, etc.
*MASK generation over whole screen.
*SORT with any data field.
*Powerful PRINT facilities including LABELS.
*WORD SEARCH facility.
*Unlimited number of fields (only limited by the memory size).
*Assign Function keys to text.

THE

EXCELERATOR+

For COMMODORE Computers

Why buy a 1541C when you can buy this neat, reliable and compact drive for less money?

FEATURES

- ★ Handles Disc Turbos
- ★ Direct Drive Motor
- ★ 1 Year Guarantee
- ★ Ultra Compatible
- ★ External 8/9 Switch
- ★ Very Reliable
- ★ Compact Size
- ★ Very Quiet
- ★ Doesn't Overheat
- ★ 20% Faster

Tests have shown the Excelsator to be more compatible with protected software than the CBM 1541C. We can't find any software that it will not load.

TWO PURCHASE OPTIONS —

DON'T BUY A LUMBERING HIPPO (1541C)!

THE EXCELERATOR+ OFFERS MORE FOR LESS MONEY

SPECIAL INTRODUCTORY PRICE ONLY **£159.95**

COMBINATION OFFER EXCELERATOR+ and FREEZE FRAME Mk IV ONLY **£179.95**

THE SLIMLINE '64

Give your '64 the modern look

A NEW IMAGE FOR THAT FAVOURITE COMPUTER

- Easy to Fit
- Lower key height

This modern case with it's sleek style will transform your '64. The high quality injection mould is superbly finished in the latest ivory colour. The lower key height is also a boon to operator comfort. Fitting is very simple, requiring just a Philips screwdriver, and can be completed in less than 10 minutes. Stock now available so order for quick delivery.

Only **£19.95**

DOLPHIN DOS

YOU WON'T BELIEVE YOUR EYES!

THE EFFECT IS STAGGERING.

Now established as THE parallel operating system for the 1541 disc drive. Hundreds of satisfied users include business, hobby, full-time programmers, and many leading software houses, including Gremlin Graphics, Domark, Superior, Alligata, Thalamus, Adventure International, and Software Projects.

The speed and efficiency is truly unbelievable, it is compatible with the vast majority of commercial software, speeding up both the loading of the program and of SEQ/REL files. (It is brilliant with Superbase, Easyscript, etc.) For non-compatible programs it can be completely switched out. It DOES NOT use a special disc format and your existing discs will be compatible.

FITTING

Fitting involves the insertion of two sub assembly circuit boards, one in the 1541 and one in the '64/128. These normally just plug in but on some '64s a small amount of soldering is necessary.

SOME OF THE FEATURES

- ★ 25x FASTER LOADING (PRG FILES)
- ★ 12x FASTER SAVING (PRG FILES)
- ★ 10x FASTER LOADING (SEQ FILES)
- ★ 8x FASTER SAVING (SEQ FILES)
- ★ 3x FASTER LOAD/SAVE (REL FILES)
- ★ E.G. LOAD 202 BLOCKS IN 5 SECS
- ★ EASY AND FAST DOS COMMANDS
- ★ USE 40 TRACKS FOR 749 BLOCKS
- ★ MONITOR BUILT IN
- ★ DRIVES CENTRONICS PRINTER
- ★ ENHANCED SCREEN EDITOR
- ★ EXTRA BASIC COMMANDS

(These figures do not allow for searching)

EXTRAS AVAILABLE

Kernal for '128 in '128 mode **£9.95**
User port expansion card (3 slot) **£14.95**
Dolphin Copy (Whole disc in 18 secs and lightning fast file copier) **£7.95**
Dolphin main board for second drive c/w lead **£44.95**

If you require further information, please send SAE for fact sheet

Best Hardware Utility of year

THE CHOICE IS YOURS!

FREEZE FRAME

BACKUP CARTRIDGES

THE FACTS

Almost eighteen months ago, Freeze Frame Mk I revolutionised backup methods. Since then many imitators have appeared on the market. Some of the claims being made for certain of these products are rather misleading. Let us inform you of some positive facts.

1. Much of the new software released uses "Anti-Freeze"; only Freeze Frame and one other product can handle these.
2. Only Freeze Frame can automatically handle these and other programs. You don't need to be an "Expert" or need "O" levels to operate Freeze Frame.
3. At press date (11.2.87) our exhaustive tests were unable to find any memory resident program that both Freeze Frame Mk IV and Lazer were unable to back up, completely automatically.
4. Similar tests with all rival products proved disastrous.

THESE ARE THE FACTS
(not outrageous advertising claims)

FREEZE FRAME Mk IV

NEW PRICE . . . WHY SETTLE FOR LESS!

Now you can buy a pedigree Freeze Frame backup cartridge for a startling new price. No need to settle for less, this is the latest development of the originator. More power, more features, easier to use.

POWER

Legendary amongst Commodore owners but with continual development now even more impressive.

FEATURES

Three cartridges in one . . . fast load, utilities and backup.

**TAPE to DISC
DISC to DISC**

**TAPE to TAPE
DISC to TAPE**

So simple to use, just plug in and switch on, at the menu choose your option, no messing with software, it's always ready.

Load the program that you wish to backup, press the button on Freeze Frame, then you can either:

1. Press "D" to save to disc with fast reload.
2. Press "S" to save to disc with standard reload.
3. Press "T" to save to tape with fast reload.

MULTI STAGE PROGRAMS

The standard cartridge will transfer to disc many tape based multi stage programs, e.g. Summer Games II, Silent Service, Winter Games, etc. and when used in conjunction with the regularly updated "F.F. Utility Disc" the vast majority of programs of this type can be handled.

MORE FEATURES

- * Doubles as a fast load cartridge
- * Loads extra parts fast
- * Built-in Fast Format
- * Built-in File Copier (up to 248 blocks)
- * New "SELECTLOAD" feature (Press "L" for directory, select with cursors, then press F3 to load).
- * Undetectable by software
- * Files compressed for disc economy
- * 128/128D compatible in '64 mode

PROGRAM RELOAD IS INDEPENDENT OF CARTRIDGE

NOW ONLY £28.95

At this price there is no need to settle for less

UPGRADES: Mk I or II . . . £14.95

Mk III or IIIB . . . £9.95

Mk IV to LAZER . . . £11.95

FREEZE FRAME LAZER

ANOTHER TRENDSETTER?

From the design team that changed the face of backup technology comes another innovation. The powers of Freeze Frame have been combined with a staggeringly quick new loading system. An amazing 32K of ROM provides you with all the facilities of Freeze Frame Mk IV as described opposite, plus the stunning new LAZER loading technique.

Check these LAZER features:

- * Reload a program in 10-15 seconds *
- * Save a program in 10-20 seconds *
- * Loads extra parts at VERY HIGH speed *
- * Load speed approx. 20x normal *
- * Save speed approx. 20x normal *
- * Includes RESET *

Cartridge must be present to reload at LAZER speed
Proven power with stunning new technology:

ONLY £39.95

UPGRADES: Mk I or II . . . £29.95

Mk III or IIIB . . . £19.95

Mk IV . . . £11.95

"F.F." UTILITY DISC V2.0

Now with many more routines to allow the complete transfer from tape to disc of programs that load parts as the program progresses. Used in conjunction with Freeze Frame for the awkward ones that cannot be handled by the standard cartridge. Included are routines for most popular games like Supercycle, World Games, Gauntlet, Trivial Pursuit, Ace of Aces, Dragons Lair I & II (includes training mode), etc., etc.

ONLY £7.95

Update fee for owners of V1.0 is £2.00

DISC DISECTOR V5.0

The fifth version of the country's leading disc backup/utility program. This latest version includes many "PARAMETERS" to handle the latest highly protected discs. This includes the latest American and English software. Be warned if you want to back up software by Ocean, Gremlin, Hewson, Domark, and even U.S. Gold whose protection schemes are NOT always the same as the American versions, then you MUST have "D.D.". At press date, we are sure NO other advertised product will handle all these, be it American or German.

INCLUDES THE FOLLOWING

- * EVESHAM 3 MINUTE NIBBLER
- * EVESHAM 8 MINUTE NIBBLER
- * MANY PARAMETERS (The vital code for the protection schemes)
- * DUAL DRIVE NIBBLER
- * MENU MAKER (with select facility)
- * DISC ORDERLY
- * FAST FORMAT
- * FAST FILE COPY
- * UNSCRATCH
- * DISC RESCUE
- * DISCMON+
- * ETC., ETC., ETC.

The whole package is menu driven and has its own fast boot system built in for your convenience. Pays for itself the first day you receive it.

ONLY £24.95

Customers with earlier versions may return them along with a payment of £7.95 to receive V5.0.
Most routines are CBM 128 and 1570/71 compatible in '64 mode.

QUICKDISC+

Our highly popular fast load and save plus utility cartridge has received many favourable reviews.

- * FAST LOAD (5 to 7 times improvement)
- * FAST SAVE (5 to 7 times improvement)
- * FAST FORMAT (20 seconds)
- * FAST BACKUP (4 minutes)
- * FAST FILE COPY (up to 248 blocks)
- * EASY DOS COMMANDS
- * CENTRONICS PRINTER DRIVER
- * RESET BUTTON (unstoppable)
- * HELPS MENU
- * USES NO MEMORY
- * '128 COMPATIBLE ('64 mode)

Exception value for money at only . . .

£19.95

1541 QUIET STOPS

Cure for ever the dreaded 1541 drive head "hammering".

- * Easy to fit
- * Detailed instructions
- * One kit does two drives
- * Helps prevent misalignment

ONLY £4.95

Not suitable for "turn lever" type drives.

DOUBLER

THE tape backup "device"

Many thousands of this popular product have been sold and sales continue to flourish. Why? We think because it is the best product of its type. Consisting of hardware and software it uses a unique method controlled by the software that allows you to produce perfect backups of your tape software.

It is very easy to use and very successful, in fact our tests have proved that Doubler can achieve 100% success.

ONLY £12.95

1541 PHYSICAL EXAM

Have you got . . .

Alignment problems

If so, you need this package. Contains digital alignment disc and drive fault diagnosis software that allows you to check and correct head alignment.

- * CHECKS RADIAL ALIGNMENT
- * CHECKS SPEED
- * CHECKS BELT AND CLAMPING
- * THOROUGH INSTRUCTIONS
- * INCLUDES QUIET STOPS

Contributions

*So you own a Commodore? So you've
written some programs? So why haven't you
sent them to us?*

Your Commodore is always on the look out for new programs, hints and tips, articles and even regular series. In fact if you have something that you think could be of use to other Commodore owners we want to hear about it.

So if you have got something which you think we may be interested in. How do you go about submitting it to us?

Below you will find a list of guidelines that will help us to deal with any item that you send in to us. We don't expect everybody to be the next William Shakespeare but if you do follow these simple rules then it will make our job a lot easier.

1) If possible all material sent to the magazine should be typed or printed out on a computer printer.

2) All text should be double spaced i.e. there should be a blank line between each line of text. You should also leave a margin of about 10 characters around the text.

3) On the very first page you should put the following:

Name of the article
Machine that it is for
Any extras required - disk, printer etc.
Your name
Your address
Your telephone number

4) The top of every page should have the following information on it:

Abbreviation of the article title
Your name
The page number

For example, suppose you had submitted an article on C64 interrupts. You should put something like the following at the head of the page:

Interrupts/J.Smith/1

5) Please make sure that you do not make any additional marks on your text especially underlining.

6) Try and write in clear concise English, it does not have to be a work of literature but it must be comprehensible.

7) On the bottom of each page you should put the word MORE if there are more pages to the article or ENDS if it is the last page.

8) If possible, enclose a listing of all programs.

9) Under no circumstances use a staple to hold the pages together. Use a paperclip instead.

10) Programs should be included on either disk or tape. Make sure that you SAVE two copies of every program so that we have a better chance of loading them if problems occur.

11) Programs under 10 lines can be included in the text. If your program is longer than this you must enclose a disk or cassette.

12) If your article needs any artwork then supply clear examples of what is needed. We don't expect you to be an artist but we do need to see what is required.

13) Photographs, if necessary, must be either black and white prints or colour slides. We can take shots ourselves so don't worry about this too much.

14) Submissions of any length are welcome. If you have a five line routine that you think may be of use to someone else we welcome it just as much as a full blown six part series.

15) Payment varies quite a lot and depends on quite a number of factors, such as complexity of program, presentation of program, number of magazine pages it takes up etc. Payment is generally between £10.00 and £800.00.

16) All payments are made in the month that the magazine containing your article has appeared in print.

17) If we do find your submission suitable for inclusion in the magazine we will write to you giving the terms of publication, the rate of payment and an agreement form. Prompt return of this form will allow us to use your program as soon as possible.

18) If you want the program returning to you, should we find it unsuitable for publication, then you should enclose a stamped self addressed envelope.

19) The last and most important point to make is 'get writing', we are waiting for your articles.

CUT-PRICE DISKS - LOWEST YET!

Offer 1 New Premium Universals

Not only are all our universal disks individually certified to 96tpi but they are now prepared to an even higher specification to ensure fewer problems, high reliability and value for money. Plus, of course, our Lifetime Warranty. Disks are packed in 25s complete with envelopes, labels and write protect tabs.

£ 14.99	25 disks	★ Full spec Hlgrade disks, made to 75% clipping level
£ 26.99	50 disks	★ Life-time no quibble warranty
£ 49.99	100 disks	★ Hub-rings on 5.25" disks
£ 96.99	200 disks	★ Label sets and envelopes included
£119.99	250 disks	★ No extras - VAT and delivery included
£219.99	500 disks	
£379.99	1000 disks	

Offer 2 New from DDS Single Sided Super Savers

TELETEXT

A world of information at your fingertips

The Microtext adaptor turns your C64 or 128 into a sophisticated Teletext Receiver. Giving you a full colour display of any of the free pages from Ceefax or Oracle. Teletext is constantly updated to give you the latest information available. As well as news and sports results, there's road, rail and air travel information, what's on TV and weather reports. You can get an update on share prices or bargain holidays, at the touch of a button. And not only does Teletext cater for special interests, like computing, motoring, or gardening, but you'll also find things to do and places to go in your area, prize competitions and even your daily horoscope, plus much much more. It's all free, easy to use and it's all at your fingertips.

With the Microtext Adaptor a page like a recipe or a software review may be saved to disc or cassette for later reloading, or you can print a page like the TV programme times on any printer which uses the serial bus. All the functions like Hold, Back one page, or Print are simply selected by pressing one key, it's very easy to use but powerful too!

The manual has examples and shows how to access and use Teletext from your own programs, the ability to tap the massive databases available on Teletext and select and use information like football results, exchange rates or weather conditions, provides possibilities limited only by your imagination.

The Adaptor is cased and fits neatly on the User port, it comes with software on cassette with instructions for copying to disc. A lead which could be extended to another room, connects to the seldom used 'VIDEO OUT' socket on your video recorder so using your video as the Tuner for the system. The ingenious concept means an extra aerial is not required, your family can still use the Main TV as before and channel selection for Teletext is done on the video which reduces the complexity of the adaptor so saving you money!

As well as the UK the system works in Australia, Austria, Belgium, Denmark, Eire, Finland, Holland, New Zealand, Norway, Portugal, Spain, Sweden and Switzerland and also with cable or satellite TV. Just £69.95 inc. P&P (Overseas add £2.00) only from:

It's easy to complain about advertisements. But which ones?

Every week millions of advertisements appear in print, on posters or in the cinema. Most of them comply with the rules contained in the British Code of Advertising Practice.

But some of them break the rules and warrant your complaints. If you're not sure about which ones they are, however, drop us a line and we'll send you an abridged copy of the Advertising Code. Then, if an advertisement bothers you, you'll be justified in bothering us.

The Advertising Standards Authority.
If an advertisement is wrong, we're here to put it right.
ASA Ltd, Dept 2 Brook House, Torrington Place, London WC1E 7HN

This space is donated in the interests of high standards of advertising.

Plus/4 and C64 Cruncher

Speed up your programs with these handy utilities.

By William Sellers

When writing programs in Basic it is essential that you make them as easy as you possibly can. This generally means spacing your listings out, and putting in lots of REM statements etc. If you don't do this and you find a bug somewhere in your program, it's going to take you a long time to locate the error.

There are however a couple of problems with well documented programs. Firstly, the program will take up a larger amount of memory than necessary and, secondly, the program will RUN a little slower.

The two utilities printed here, one for the C64 and one for the Plus/4, will solve these problems by crunching a program down to its smallest possible size.

What Happens?

The two utilities presented here can be used to crunch your program. In effect, what the programs do, is to search through a Basic program and remove all the unnecessary spaces e.g. PRINT "HI" would become PRINT"HI". All REM statements are also removed since they aren't necessary to the running of the program. Next, the program places as many instructions on one line as it can. For example the program:

```
10 PRINT "HI"
20 PRINT "THERE"
```

would become:

```
0 PRINT"HI":PRINT"THERE"
```

Once crunched the program is renumbered. The renumber takes care of any GOTOs, GOSUBS etc.

Once the program has been crunched in this way it will not only take up far less memory but will generally RUN slightly faster than it did in its original form.

Weird Lines

It is worth pointing out that when you list a program that has been crunched some of the lines will be far greater than the 80 characters normally allowed in Commodore Basic. You must never attempt to edit a line that covers more than two screen lines since the text from the third line onwards will be lost forever. Should you need to make changes make them on your original program and then crunch it again.

Getting It In

There are two versions of the Cruncher program, one for the C64 the other for the Plus/4. I will deal with entering each program in turn.

C64 Cruncher

The program is presented here in the form of a Basic loader. You should enter this program using our SYNTAX CHECKER program that can be found on the LISTINGS page.

Once you have entered the program, SAVE it to disk or tape before running. If you are using tape, make sure that you have changed the

eight to a one where indicated in the listing.

Once you have SAVED this program out, you can then RUN it. If you have made any errors they will be indicated. Correct the program as necessary and RUN it again.

Once the program has finished it will SAVE a new program out to tape or disk called C64-CRUNCHER. This is the program that you will use in future, not the LOADER. Whenever you want to use the cruncher you should LOAD it into your computer with:

```
LOAD "C64-CRUNCHER",8,1 for disk
or
LOAD "C64-CRUNCHER",1,1 if using tape.
```

Once it has LOADED you should make sure that the program to be crunched is in memory and then activate the cruncher by typing:

```
SYS 49152
```

The amount of time taken to crunch a program depends on how large the Basic program is, so be prepared to wait a short while.

Once the program is crunched you can SAVE the new Basic program to tape or disk and use it as normal.

Plus/4 Cruncher

This version of the cruncher is a little more complicated to enter than the C64 version. There are two programs

that you must enter P4-LOADER and P4-CREATOR.

If using cassette, then make sure that you make the changes as indicated in the listing.

Cassette users should also SAVE the two programs on different cassettes. I will explain why later.

Once both programs have been entered and SAVED you should turn OFF and ON your computer and then enter the following line:

```
POKE43,89:POKE44,27:POKE7000,0:NEW
```

Now LOAD and RUN the program P4-CREATOR.

When this program has finished working it will SAVE a new program

out to tape or disk. If using tape then you should set up your cassette such that this new program will be SAVED straight after the P4-LOADER program. This was the reason that I told you to SAVE the programs on separate tapes.

Running On The Plus/4

The program P4-CREATOR is no longer needed. To use the program all that is required are the P4-LOADER program and the one created by the P4-CREATOR program. Should you look on your tape or disk you will find that this is called P4-CRUNCHER.

To use the program simply LOAD and RUN the program P4-LOADER. This will automatically LOAD the

program P4-CRUNCHER.

Once this process is finished you can then LOAD the program that you wish to crunch into the Plus/4 and activate the cruncher with the command:

```
SYS DEC("1000")
```

Once the cruncher has finished working you can save the compacted program out to tape or disk to use normally.

Note

Don't forget you should never attempt to edit a crunched program. Always make changes to the original and then recrunch that.

Eureka!

Accounting Software For Small Businesses

ACCOUNT ABILITY

is a powerful suite of programs which can provide a business with a helpful and informative method of financial control.

This superb system combines the accuracy, discipline and reliability of traditional accounting methods with a friendliness and flexibility that only an integrated system can provide.

HARDWARE

Currently available for your **Commodore 128**, 128D or 8000 series computer.

Imminent Release for **Commodore 64** and P.C.

ACCOUNT ABILITY®

FULLY INTEGRATED SALES PURCHASE & NOMINAL LEDGER ACCOUNTING

MAJOR FEATURES

□ COMPREHENSIVE HELP SCREENS □ QUICK CREATION OF ACCOUNTS □ ACCOUNT NUDGE FACILITY □ TEMPORARY ACCOUNT FACILITY □ MULTIPLE VAT RATE CAPABILITY □ MULTIPLE BANK ACCOUNTS □ FULL AUDIT TRAIL □ UP TO 64 LEVELS OF USER SECURITY □ CASH SALE FACILITY □ AUTOMATIC TRANSACTION AGEING □ AUTOMATIC DISCOUNTS □ TRANSACTION MESSAGES □ OPEN ITEM OR B/F ON ANY ACCOUNT □ DAYBOOK, STATEMENTS, REMITTANCE/CHEQUES □ 24 REPORTS □ SCREEN DUMP FACILITY □ UP TO 53 PERIODS PER YEAR □ SUPPORTS UP TO FOUR COMMODORE DISK UNITS □ SUPPORTS UP TO FOUR PRINTERS INCLUDING CENTRONICS.

Games Reviews

If you've got a bit of spare cash then a game is as good a way as any to use it up. Here's a selection of some of the latest software on offer.

ZONE RANGER

Even dustbin-men have got to go high-tech sometime. As more and more satellites are launched, so space itself begins to get cluttered. Throw in a few asteroids and life soon becomes hazardous for those seeking to explore the final frontier.

So it is that you take up your new appointment as a Zone Ranger. Working for the Cosmic Garbage Clearance Company, your new position is that of Orbital Debris Destruction operative.

What this means in reality is that you whizz round space blasting everything in sight for as long as possible without crashing in to one of the multitude of hazards. These include large lumps of rocks which split into two when you hit them (remember asteroids?) and the occasional satellite. There are also some lethal beams to be dodged as well.

On the plus side, you can seek temporary refuge by driving into a warp hole, gain temporary immunity from a sparkler or gain access to the Inner Sanctum where, if you can navigate through a series of passages avoiding bumpers and sliding doors, help is at hand.

Zone Ranger is a reasonable shoot-em-up, especially at the price but, written back in 1984, it is beginning to look very dated.

G.R.H.

CYBORG

No one was quite sure what Avernus was or where it came from. A small asteroid, it was on a collision course with Earth. A month ago, seven astronauts were launched with the brief to go and investigate. Five days ago, radio contact was lost. All you have to do is find them, give them some extra fuel and restore the radio link.

As you leave your ship, you soon discover a lift that takes you deep under the surface of the asteroid. Codes must be gleaned to access various terminals and there are guards to be avoided. Although the initial area appears small, there is a huge warren of lifts and passages to be explored.

The display is divided up into three windows. Across the top of the screen is a 3D-ish view of your surroundings, bottom left is the information panel and bottom right the control panel. This gives you access to a range of commands such as picking up and examining objects, scanning the surrounding area, re-loading your weapon and analysing the character of anyone that you have just bumped off.

The game looks very much like a cross between Impossible Mission and Nexus but there are one or two areas where the gameplay could be improved. Positioning your man has to be very precise if you are to examine or pick up anything and I found frustration quickly setting in. The

same applies to walking into rooms and being able to walk through the bodies of your adversaries, most disconcerting. Also, all sense of action is lost everytime you access the control panel and the game freezes. The enemy stand motionless while you decide what you want to do.

The instructions included with the game are deliberately vague which is fair enough but there ought to be some escape mechanism if you blunder into something that you can't yet handle. For example, I entered one room and was examining all the objects when I logged on to a computer terminal by entering the floor code. The computer then expected some other input and refused to let me log off until I had entered it. As I did not particularly relish the idea of a few hours hacking, there was no alternative but to switch off. Game positions can be saved but again problems were encountered with the machine crashing on a couple of occasions.

Cyborg has some very nice ideas but they all seem to have been put together in the wrong order with the result that it is let down by some poor gameplay.

G.R.H.

ACCOLADE COLLECTION

A trio of games from Accolade's first year makes an impressive line up for a three for the price of one compilation.

For only £9.95 you can fly a space freighter packed full of to the ninth in *Hardball*, which is the best baseball game in town, and marshal a frontier town in *Law of the West*. All three games have one thing in common — they've got some of the best graphics you're ever likely to see.

Captaining a freighter on the edge of the galaxy in the 35th century isn't easy as you'll find out if you sign up for the Psi-5 Trading Company. Not only do you have to run the gauntlet of pirates plundering your precious cargo you have to rely on the robots, misfits and aliens that volunteer for your crew.

You have five positions to fill and six candidates to choose from for each post and they all have their own strengths and weaknesses. This choice is essential as they actually engineer, repair, fire weapons, navigate and scan for the ship. You just issue orders and worry a lot.

Once you're on your way you talk to the crew through duckshoot menus, get messages from them, panic when you're attacked and finally lose your cargo but you'll have learned not to rely on a pink hairy alien to fire your weapons.

Do you fancy yourself as a pitcher armed with fastballs, sliders, changeups, and curveballs? Then climb on the mound for a game of hardball. This is quite simply the best baseball game.

It features superb graphics, particularly the pitching screen, easy gameplay with pitches, fielders and batting options selected by a push of the joystick and a computer opponent that will give you a run for your money if you haven't got a human.

Finally, *Law of the West* is actually disappointing. It's incredibly pretty to look at with you (the *Law of the West*) standing with your back to the screen looking out on to a variety of western scenes.

You'll be met by a selection of townfolk that will insult you, challenge you and warn you of bank raids with four multiple choice selections providing some answers. You can also draw your gun to frighten people or gun them down but you lose points for killing innocent townsfolk.

After a couple of games the situations become repetitive and the game is destined to gather dust. Despite that, the compilations still represents excellent value for money particularly for science fiction and baseball fans.

Originality: 7/10. **Playability:** 8/10. **Graphics:** 9/10. **Value:** 8/10.

U.F.O.

Battle your way through wave after wave of aliens as you defend the Earth against yet another UFO attack. This time you're commanding the only four craft — experimental F21 Condor fighters — capable of taking on the invading masses.

Unfortunately, the design is far from complete as your lasers jam if you overheat them, and you only have a limited supply of shields and energy.

The battle is fought against a series of impressive backgrounds that play no part in the game as the action takes place in the 2D foreground. This is a shame, since aliens screaming over the tops of buildings would have added a touch of reality to a tried and tedious format.

There are a staggering four types of alien that swirl around you firing energy draining bolts at you. You can fire back and can also get top up energy supplies dropped by parachute from a plane that flies untouched through the entire alien fleet. Why can't you fly that plane?

Look at the screenshot and notice the pretty background, then go and spend your money on something a little more original, realistic and entertaining. **T.H.**

Touchline

Title: U.F.O. **Supplier:** Firebird, Wellington House, Upper St Martins Lane, London WC2H 9DL. **Tel:** 01 379 6755. **Machine:** C64. **Price:** £1.99.

Originality: 2/10. **Playability:** 4/10. **Graphics:** 6/10. **Value:** 4/10.

VIDEO MEANIES

The term video nasties takes on a new meaning when you have to battle through screens of meanies in an attempt to

turn on 15 video screens ready for a day's work. The videos belong to a crazy millionaire who lives in a castle full of meanies and you're his robot.

This isn't going to be easy as you have to navigate past exploding TV's that release a shower of deadly debris, power beams that could rip you apart, blast your way through self repairing walls, find colour coded keys for locks until finally, you reach the first video screen.

You either just collect the screen and carry on with the game with a top up of energy or you can gamble on a deadly fruit machine. Press the button at the right time and you may get a bonus score, points for any remaining energy or even an extra life. Get it wrong and you'll lose a life.

Screens and screens of budget arcade action. **T.H.**

Touchline

Title: Video Meanies. **Supplier:** Mastertronic, 8-10 Paul Street, London EC2A 4JH. **Machine:** C64. **Price:** £1.99.

Originality: 6/10. **Playability:** 7/10. **Graphics:** 5/10. **Value:** 7/10.

DOGFIGHT 2187

In the year 2187 man faces his biggest threat as hordes of marauding aliens swarm through a split in the space time continuum. Only you, Rhett Dexter can stop them.

You manage to steal one of the disbelieving World Corporation's new interstellar fighters and head for the stars. Your mission is to find nine parts of a generator that the ancient ones spread about the galaxy to seal such a split. That's the plan anyway as the ancients and the generator are just part of the planets folklore so you hope there's some truth in them.

Luckily, the stories were true and there are in fact 100 pieces of generators scattered around the stars so finding just nine should be easy. It would be easy if you weren't constantly attacked by the alien invaders that are determined you will fail.

The game features a vertical split screen display in which one or two players can join forces against the computer or each other as they blast away at the swirling vector graphic ships.

You have only 30 minutes to complete the game, accompanied by Tony Crowther music. It will push galactic dogfighters to their limits. **T.H.**

Touchline

Title: Dogfight 2187. **Supplier:** Starlight Software, 68 Long Acre, Covent Garden, London WC2E 9JH. **Tel:** 01 836 3411. **Machine:** C64.

ROMULUS

Battling through a bizarre shoot 'em up while competing in sub games is supposed to represent debugging a super computer chip in an arcade game destined for obscurity.

Since Stavros and Robinson are on holiday, it's up to you Nick Bradley, to debug the chip. This unbelievable task involves surviving an eye distorting shoot 'em-up stage in which you're bombarded by missiles and alien craft (bugs?). Survive until the time bar runs out and you qualify for the first subgame (wow!). The first thrilling subgame sets to matching colours in three pairs of rotating bars but you must also match their speeds!

If you've survived (the excitement) this far, you can take on subgame two and move the laser base left and right while firing at a bar.

If you like your arcade games to be fast, furious and challenging then forget this one.

T.H.

Touchline

Title: Romulus. **Supplier:** Quicksilver, Victory House, Leicester Place, London WC2H 7NB. **Tel:** 01 439 0666. **Machine:** C64. **Originality:** 2/10. **Playability:** 3/10. **Graphics:** 3/10. **Value:** 3/10.

GUNSTAR

If you like your games to be cheap and cheerful then sign up for the Gunstar fleet and defend the Earth from yet another alien attack. The aliens made easy work of the Star Wars defence system and now you must stop them.

There are five stages to this budget battle in which our heroes fight it out with the invaders from space. The conflict begins with an old fashioned shoot the swirling aliens before they get you game which is followed by a stage in which you must pick your way through an asteroid belt. Next it's a

gunfight with an alien command ship. It takes 90 shots to take out its gun turrets only to meet an Alloy robot wielding more gun turrets. Finally, you must dock with your mothership to refuel and rearm for the next alien attack.

A display strip on the side of the screen keeps track of your score, fuel and laser temperature (overheat and they jam) as well as a hint screen that gives you invaluable tips such as avoid enemy missiles and don't crash into the asteroids.

A fun game but don't expect too much from it. T.H.

NOW GAMES 4

Five games for the price of one is the offer from the fourth in the Now Games series that features the adventures of Dan Dare, the game based on the film Back to the Future, the twilight world of Hacker, the strategic struggle of Mission Omega and a Squash simulation complete with speech.

The C64 version of Dan Dare was widely acclaimed as being the best graphically and featured some superb screens. Now you can guide Dan on his quest to defeat the Mekon's

attempt to destroy the world with an asteroid. Dan must board this hollowed out craft, battle with the guarding Treens and guide a laser blast through a series of reflecting mirrors to destroy the computers.

Unfortunately, the game is let down by a cut price combat routine whenever Dan meets a Treen as the battle is resolved by high and low punches.

Back to the Future is a truly amazing game. How anyone can get the rights to a box office smash like Back to the Future and produce such an appalling game is beyond comprehension. Naturally, it features the film's main characters and your attempts (Marty McFly) to ensure you will exist. You've been transported back to the fifties where you must make sure your father meets your mother who's madly in love with you and being chased by the school bully Biff. According to Electric Dreams, this makes the game an arcade adventure in which you must explore only five locations, five object and talk to only four characters!

Hacker brings to your screen the joys and frustrations of hacking without the summons. This game's more like the real thing than its 'guide the robots sequel' Hacker II. The game begins as you dial the wrong number and instead of your usual bulletin board you get the message to log on. Log on to what? You don't know the password or even the system you've found but you're determined to find out in an adventure where you find yourself delving deeper and deeper into the unknown.

Your task in Mission Omega is to build a team of robots to explore and plunder an alien spacecraft that's on a collision course with Earth. Earth has programmed missiles to destroy the craft leaving you only a few hours to explore the ship.

Using icons you must build your robots from a selection of bases, drive units, and balance the speed and attack and defence capabilities to its specific job. They can then be controlled manually or programmed to follow defined routes. Inside the alien ship you'll find critters to challenge your battle robots and puzzles to baffle your scouts in a game that's a mixture of strategy, arcade and exploration.

Finally, Jonah Barrington's Squash is the pick of the bunch and is a fast accurate simulation of the frantic sport. You can play either another joystick waggling human or four different computer opponents in 3D graphics with Jonah keeping the score thanks to some impressive speech synthesis. The game didn't do too well the first time round in

1985 despite its 3D graphics, speech and fast action gameplay maybe it will be second time lucky as the heavyweight part of this compilation.

In this five game compilation there is one excellent game (squash), Hacker and Dan Dare that are good, Mission Omega which will pass away a few spare moment and the dreadful Back to the Future. Now 4 also lacks the big game of previous compilations such as Lords of Midnight (Now 1) and Tir Na Nog (Now 2) and as a result is a weak compilation and just isn't worth the money. Go out and buy five budget games instead.

ARMY MOVES

Can you believe it? Ocean has released yet another Commando type game, however this is miles better than some versions of the game.

The plot for this game is far from original but, good plots these days are few and far between. You are a member of the SOC (Special Operations Core), a bunch of highly trained tough guys who are ready for almost anything!

Locked in the enemies safe are some vital plans which, in your hands could cause a big turning point in the conflict between you and the bad guys.

Reaching the stage is no easy task, there are blown-up bridges to navigate while avoiding the enemy jeeps and buzzing helicopters that drop bombs.

Stage two puts you in the control of a deadly helicopter and this time you must destroy the ground bases and enemy, but it's so damned hard.

The next stage has you flying over the sea where you are constantly attacked by submarines. The fourth stage is set in the jungle, here look-out posts will bombard any intruders (you) but these can be destroyed with a well aimed bomb.

On completing the fourth stage you are given a code for levels six and seven which can be loaded separately to save playing levels one to four all over again.

Level 6 has you trapped in a huge swamp, and progress is made by jumping on small islands. You are in the jungle

armed with a machine gun and grenades, huge birds swoop down at you, these cannot be killed. The only way to deal with these is to frighten them off with gunfire. There are also snipers which hide in the bushes and lob grenades at you, all this must be avoided while jumping from island to island. Finally you reach the barracks, this is very hard indeed and it will be a long time before I manage to reach the plans.

Overall Army Moves has a strong addictive pull to it, with nice music and sound effects and some lovely graphics, my only moan with it, is the toughness of the game, younger players should check it out first.

SAMURI TRILOGY

Why has Gremlin released yet another oriental beat em-up? This is the third so far and this is starting to wear a bit thin now.

OK so it is different from the rest but why can't software houses come up with an original title once in a while? Anyway enough of the moans and on with the review.

Deep in the Orient in the province of the Nang River, exists a band of fighting warriors. Highly skilled and deadly, they are the roughest, toughest warriors since Bruce Lee.

On the River Nang is a temple known as the 'Ghopemup Temple' and this is where students are trained in Karate,

Kendo and Samurai sword fighting. The training is so hard that only the best student will be accepted and if he manages to graduate he will have his name inscribed on the 'Chopemup Temple' wall.

You can choose a number of options including the style you wish to fight in e.g. Karate, Kendo etc and whether to fight until death or just have a practice run.

In a practice fight you simply try out the various moves available to you, but no points can be scored. In a real fight you can choose your defence and attack. You can also choose your opponents defence and attack points. The real fights last a minute at the end of which you have a chance to meditate to get back your strength. The methods for

choosing your opponent are the same in all the types of fighting.

After playing Samurai Trilogy for a while I was hooked, the music is far out and really suits the game, the graphics are very impressice and the gameplay is awe-inspiring, this game really manages to capture the atmosphere which a lot of Karate games do not achieve.

Another impressive thing about this game is the flashy presentation and the original oriental words such as Kata (combination of step punches). This goes to show that some software houses can take their time to research subjects on which their games are based, not just rush the games out as quick as they can or hype it to its teeth like a few houses I could mention.

Well done Gremlin, more like this please!

Touchline

Title: Samurai Trilogy. **Supplier:** Gremlin. **Telephone:** 0742 753423. **Machie:** CBM 64/128. **Price:** £9.99.

Originality: 4/10. **Graphics:** 8/10. **Playability:** 9/10. **Value:** 8/10.

I hate insects! Not the ordinary spiders, bees and blue bottles but the giant insects that have taken over the city! Driving an Arachnus 4 armoured car that's armed with partially tested bouncing bombs you must clear the insects from the city's 25 regions.

The insects not only outnumber you but are also organised into colonies led by the queen that can produce scouts and drones as quickly as you can kill them. The scouts and drones are sent out to gather food and look for and defend against intruders. The more food they gather the faster the queen can replenish their losses.

To add to your troubles you're not supposed to damage the city and so you have to be careful when you aim your bouncing bombs since these carry on bouncing until they hit something. They also bounce a lot slower than the insects move so you have to anticipate where they're going to fly.

Although the insects don't fire back they can damage your car with contact so it's best to keep your distance until you can get your shot in. The Queen is harder to kill and is only destroyed by a superbomb that you can get from your base by radioing your superior. You can also order more bouncing bombs and get your car repaired but you have to

pay for all of this out of your limited budget.

The result is a game that will challenge you but will soon become repetitive as you face region after region of drones, scouts and queens. The game needs more insects, more action and faster gameplay.

AUF WIEDERSEHEN MONTY

He's out. Good old Monty has escaped to fight again. However, he still isn't safe and this is where you step in.

This game, like the previous Monty games, is simple to play, thoroughly entertaining, and difficult to get anywhere.

Your job is to guide Monty around Europe trying to collect enough money for him to buy his own island.

Monty starts off his journey in Gibraltar but he's got to leave and quickly, as Interpol are onto him. Someone's sneaked on him.

To make his escape Monty needs to collect money and airline tickets which just happen to be laying around, though not usually easy to get at.

In order to get enough money Monty must travel around Europe collecting and selling certain items on his way. As in

any other game there are many things to avoid. For instance if you run into a bottle of wine you will find Monty in a drunken stupor for a certain length of time, which can of course be hazardous to your health if something is bearing down on you.

You need to be a jack of all trades to help Monty succeed. You may be required to flog the Mona Lisa or even enter yourself into a grand prix.

The one difference I found with this game from other platform games is that once you've had enough of one country, as long as you have an air ticket and some money, you can take of in a plane and take yourself elsewhere. Extra points may be gained in flight by flying into the planes in front of you.

As you visit each country its national anthem is played.

As long as you're into music you can't forget where you are.

If you are a platform game fan you should enjoy this one. It does have a few differences to the norm and an overall aim behind the game.

So swat up on your geography and go give Monty a hand.

MARIO BROS

Mario and Luigi are the famous Mario Brothers who clear pests from pipes to make the money for the spaghetti (to be read in an Italian accent).

Mario on his own, or with Luigi in a two player game must clear the turtles, crabs and flies from the pipes by flipping them over as they crawl along the game's platforms in this conversion of a three year old Nintendo coin-op game. To kill the critters you must get under them and jump up to bend the platform they're crawling along. This will flip them over leaving them vulnerable to a swift kick to finish them off. You have to be quick to deliver this final blow as they'll struggle to right themselves and continue their relentless march. You also have to be careful not to flip them again or they'll be back on the move again.

If you clear the screen then it's on to the next level packed with more turtles, crabs and flies as well as balls of fire that track your every move. All is not lost as you can also collect bonus disks and even hit a POW plunger that flips all the nasties on the screen (even those already flipped).

The action is mildly addictive particularly when Mario and Luigi work together (although you wouldn't think it if you heard the arguments about who's fault it was). Unfortunately, looks and plays like an old game that just isn't worth a full price tag. Instead why not look at any of the coin-op conversions featured elsewhere in this issue such as Nemesis or Archanoid.

FUNGUS

Have you ever been decapitated by a fir tree or a bird? Well if you don't fancy the idea don't offer to guide Fungus while he goes hunting mushrooms inter-galactically. He'll get you into all sorts of trouble.

Fungus is part of a two game pack from Players. If you do take the challenge then you'll need to have your wits about you as it is very fast moving. No sooner do you think that you have made a safe landing and start eyeing up the next batch of juicy mushrooms when you walk into another tree, or even better over the top of a cliff.

The writer has introduced a new concept for growing mushrooms, on islands floating about the galaxy, funny, I always thought that they were stars. For some reasons the mushrooms seem to grow very well in this strange atmosphere surrounded by poisonous trees, lethal shrubs and weird creatures.

The idea behind the game is to keep Fungus's craving for Great White Mushrooms satisfied, and believe me that's not easy.

As you leap along from one island to another there are different hazards awaiting you. What makes the game even more difficult is that the islands are in three dimensions and sit at an angle on the screen. This sometimes leads to the impression that you are on the right path to avoid a tree when you end up walking slap, bang into it.

However, even though Fungus is difficult there is no reason why you shouldn't enjoy it, it does have a certain "one more go quality".

The second game in this two game pack is called Fruity. This game calls for a bad case of 'watch the birdie'. No I don't mean grin like a cheshire cat I mean watch the vulture that is hovering above you.

Unfortunately this second game doesn't compare at all well with the previous one. The aim is to collect fruit from trees in an orchard and of course, like every other fruit picker I've seen, you do this by leaping up and down on a trampoline.

To make life a little harder you don't jump straight so you have to move the trampoline around so that you always land on it, otherwise, yes you've guessed it, you die.

I found Fruity extremely monotonous. The only variety being the kind of fruit that you pick and the increase of speed with each level.

Being a budget pack I would say that this collection was a

good one for the kids although they may find it a little difficult. For expert game players I don't think that there's much here to keep you occupied for long.

If you like simple but fast games then this may be for you.

Title: Zap Pack - Fungus and Fruity. **Supplier:** Players Software, Calleva Park, Aldermaston, Berks RG7 4QW. **Tel:** 07356 71505. **Machine:** C64. **Price:** £4.99.

Originality: 8/10. **Graphics:** 6/10. **Playability:** 4/10. **Value:** 6/10.

ROGUE TROOPER

You are Rogue Trooper. A genetic infantryman specially engineered to breathe the poison chem-clouds of the Nu Earth. You are also the only survivor of the Quartz massacre and out for revenge.

Your only companions in your struggle to find eight vid tapes that will catch the traitor, are the personalities of your three GI buddies stored in your gun, backpack and helmet. These yell out useful advice about what to kill (everything), what to collect (ammo, medikits and vid tapes) and the odd tip such as reminding you to search behind walls.

The action takes place on the polluted 3D world of Nu Earth that's constantly patrolled by the enemy Norts that will shoot you on sight and even Southrs (your side) who think you're a deserter.

Unfortunately, the action is also desperately slow and features Spectrum like colours and graphics with one of the worst scrolling routines you are ever likely to endure. The game was originally written for the Spectrum which explains the conversion but I feel that C64 owners expect more since their machine has twice as many colours, sprites and three unused sound channels.

A good base for a game that could have been a lot better.

Flipside!

Mycro-Systems Software, makers of *Scribble!*, *Analyze!* and *On Line!*, has announced the release of *Flipside!* for the Amiga.

Flipside! performs wide side printing on just about any program that uses

text or IFF files. Compatible with most printers, *Flipside!* has many unique capabilities. For instance, if you were to create a large spreadsheet with *Analyze!*, *Flipside!* will allow you to have unlimited columns widths and cells by printing the sheet on its side, as wide as necessary.

ACS
PRESENTS

FX
E/FX

PRODUCTIVITY SOFTWARE

STATION MANAGER E/FX

- Sophisticated television station graphics and animation system.
- Easy to use "storyboard" based graphics engine makes the creation of still or animated graphics sequences quick and simple.
- Uses high resolution (672x444), double buffered animation for super smooth movements.
- Extremely flexible advanced color cycling functions.
- Over 40 different wipes, dozens of backgrounds, hundreds of brushes.
- Fully mouse driven.
- Works with any high resolution AMIGA graphics packages.
- **ONLY \$295.00** with remote control **ONLY \$395.00**

STATION MANAGER WEATHER GRAPHICS

- Full television station weather graphics system.
- Works in conjunction with E/FX to provide stunning graphics and animation. (see E/FX)
- Dozens of high resolution (672x444) IFF weather maps and backgrounds.
- All maps and backgrounds are completely user-customizable with the addition of any hi-res AMIGA drawing package.
- Down-load software allows reception of maps and weather data from all the most popular weather services.
- Map customization services available.
- **WEATHER GRAPHICS \$295.00**
- **WEATHER GRAPHICS DELUXE \$995.00** (Includes E/FX, remote control, Deluxe Paint* and customized maps)

QUIZ MASTER

- Allows teachers to create their own lessons in any subject, or edit and personalize MUSIC STUDENT I and II.
- Available for AMIGA and MS-DOS. (MS-DOS requires 2 drives and graphics board.)
- Permits 8 levels (240 questions). Up to 40 questions per lesson. Up to 9600 questions all on one disk.
- Any question format: T/F, multiple choice, fill in the blank, and answer the question.
- Supports sound, music and graphics.
- **ONLY \$79.95**

QUICK MERGE

- The first AMIGA mail merge program that supports ALL Textcraft type styles, margin settings and justifications.
- Works with data exported from any AMIGA database or created in any text editor.
- User definable field and record separators.
- Raw, Final or Draft output modes.
- Print to Disk or Printer with complete control over page break separators.
- Variables may be used an unlimited number of times, ANYWHERE with your Textcraft document.
- **ONLY \$59.95!**

BRUSH-WORKS Volume I

BUSINESS PRESENTATION GRAPHICS CLIP-ART

- Over 100 unique symbols and images.
- No conversion necessary—all brushes have been drawn in high medium and low resolution modes.
- AMIGA IFF compatible—use with any AMIGA graphics package
- **ONLY \$29.95!**

BRUSH-WORKS Volume II

BOXES AND BORDERS

- Over 500 different borders and text box combinations.
- Designed especially for use in desktop publishing packages such as Page Setter*.
- Themes include: historical (from Roman to Modern), seasonal, architectural, theatre, heraldic, caption, landscape and industrial design.
- **ONLY \$29.95!**

BRUSH-WORKS Volume III

FONTS AND FIXTURES

- 25 all new AMIGA fonts.
- Each font works in all AMIGA resolution modes.
- Powerful 'FONT MAKER' allows you to turn digitized or scanned IFF pictures into font sets in just minutes!
- Designed for use in desktop publishing and business presentation graphics.
- **ONLY \$29.95!**

BRUSH-WORKS Volume IV

DESKTOP PUBLISHING CLIP-ART

- Over 200 pieces of clip-art designed especially for AMIGA desktop publishing.
- Full IFF compatibility allows all images to be used not only in desktop publishing but in any medium resolution AMIGA graphics package.
- Themes include: holidays, seasons, captions, people, sports, cartoons and MUCH more!
- **ONLY \$29.95!**

GRADE MANAGER

- Comprehensive electronic gradebook.
- Up to 100 students with 100 grades each.
- Handles extra credit and incompletes.
- Automatic conversion to 100% point scale.
- Prints rosters, gradebook, sheets, grade lists, progress reports and more.
- 8 weighting categories.
- **ONLY \$89.95 (Amiga) \$69.95 (Commodore).**

MUSIC STUDENT I

- Music theory concepts.
- 178 lessons on one disk.
- Intervals, triads, scales, terms, symbols, and more.
- 8 levels—beginning through intermediate.
- **ONLY \$59.95.**

Earn An Amiga

Audiogenic Software is currently running a recruitment drive to find programmers who can write a top 10 game.

As an added incentive to make people come forward, apart from the obvious one of royalty payments, Audiogenic is offering writers of new games, whose product reaches the Gallup top 10 a Commodore Amiga 500 worth over £500.

For anyone who writes a game for Audiogenic which reaches the number one spot in the Gallup software chart, there is an Amiga 2000 plus hi-res colour monitor waiting to be claimed.

this is worth over £1500.

Audiogenic's Peter Claver said: "Audiogenic has always had a good reputation for games but we're no longer in the top 10 companies. We aim to get back there, and we want out programmers to share in our success."

Touchline

Audiogenic: 12 Chiltern Enterprise Centre, Station Road, Theale, Berks RG7 4AA. Tel: 0734 303663.

Games From Psygnosis

Liverpool based Psygnosis has been writing software for the Amiga games market for about two years. The company has recently announced two new launches.

The first is *Barbarian*, an animated fantasy graphic adventure in which the player becomes Hegor the famous dragon slaying barbarian.

His task is to enter the underground world of Durgan which is terrorized by the evil Necron. In the underground real there are gruesome

monsters to contend with as well as hidden traps, in the quest to destroy the lair of Necron and claim the crown of the Kingdom.

The second game for the Amiga is entitled *Terrorpods*. It is a strategy arcade game in which the player must attempt to defeat the invading Tripod forces. The action is set against a 3D playfield with perspective scrolling. All defensive and offensive action takes place in a high speed environment where even trading must be accomplished against the clock.

Agility of both mind and hand is needed in this game which covers trading, resource management and defence of yourself and your installations in order to achieve your ultimate aim of destroying the Tripods and their mothership.

Both feature artwork by science fiction illustrator Roger Dean and cost £24.95.

Amiga Agony

When you have finally saved up enough money and bought your Amiga, you're bound to find many aspects of your new machine confusing. Here's where you can come for help.

By George Duval

To Buy or Not to Buy

Having read a great deal of articles on the Amiga, I decided to purchase one. Unlike many readers, I use my computer purely for pleasure, and saw the Amiga as a natural progression from my Commodore 64, which I like to think I have mastered.

Anyway, just as I was about to place my order, I read in your magazine about the new Amigas, and particularly about the new A500. Consequently, I have a few questions to ask. Firstly, can the A500 be expanded as much as the A1000? Secondly, will all A1000 software run on the A500? And finally, if the A500 is so similar in specification to the A1000, why is it so much cheaper?

Simon Weldon, County Down

Yes, yes and who knows? Firstly, the A500 is, with all due respect to the powers that be at Commodore, an updated A1000 in a different box. It is just as expandable, has all the same ports, and will run all the same software. The only idfferences there are relate to the power supply and the motherboard construction.

How Commodore can continue marketing the A1000 I am not sure, but in your case I would buy an A500 without any qualms.

Play it Again, Sam

I am a freelance musician interested in using computers to further the state of music in this country. At the college where I lecture, there are two Commodore Amigas used by the science department for a variety of tests. For the summer holidays I have been able to organise the loan of one of these machines and I was wondering if you knew of either a MIDI interface or some Sound Sampling software that is currently available, and hopefully not too expensive.

K. McMillan, Gwent

The only software of this type that I know to be available now is from Precision Software. Produced by Mimetics, an American company, both products come with both hardware and software.

Although I haven't used either package, I have heard a disk of the samples that can be created and they are, to say the least, spectacular. Precision Software can be contacted on: 01 330 7166.

Slow Train to Go

Having used an Amiga only a matter of weeks after graduating from an IBM PC AT, I have one major problem.

How on earth can the disk drives be so slow? When I am using *Logistix* it is not too bad, but *Textcraft* is paralyingly slow. Is there anything I can do about this, or will I have to learn to live with it?

John Barns, Chiswick

AmigaDOS has come in for quite a lot of criticism over the last few years, and none of them more justified than this. Unfortunately, there is very little you can do about it, short of buying a hard drive or swapping back to your AT.

One answer you might look at is the new A2000, with an IBM PC compatible board. Using some clever hardware tricks, it has been made possible for users to partition the hard drive, with sections for the PC, and sections for the Amiga. This could provide the ideal answer, although, paradoxically, it is by no means a cheap one.

Taking You to Task

Although the Amiga seems to be a very good computer for specific tasks (excellent graphics, good stereo sound) the aspect of the computer that should really be causing a stir is surely its multi-tasking abilities. What practical advantages does multi-tasking really bring?

Peter Tookey, Southend

Multi-tasking is, in my view, the single most important feature in the Amiga. Users who play games or produce graphics probably won't even notice the multi-tasking, it is only business users who can really reap the true benefits.

Although there is a dearth of business software for the A1000, the new A2000 ought to change that, and when it does, a new generation of software ought to become available, all using multi-tasking. In simple terms, multi-tasking means that the computer can split its processing time between various so-called tasks. A good example would be that you could print out a document from one word processor whilst writing an article on a separate word-processor. Admittedly this slows the computer down, but the speed reduction still leaves the Amiga running faster than an IBM PC!

Very few packages yet allow the user to make the most of multi-tasking, one exception to this is Scribble which, for all its faults, allows the computer to work at other things, communications for example, while processing a file.

Horsing Around

As a gamesplayer whose father recently purchased an Amiga, I have found the drought of decent software is slowly but surely ending. However, I still find it surprising that some of the games are of such poor quality. Why is this? Why don't the programmers take advantage of the 'Blitter'?

David Tweed, London

This is a very good question, but I'm afraid to say that the answer comes down to money. As yet, there are not enough Amigas about, particularly in the UK, for many software houses to justify writing games for the machine. As well as this, most games that are released tend to be conversions, almost all of which are identical to the Atari ST version. In many ways this defeats the object of buying an Amiga, and I can understand your annoyance.

On the other hand, there are some excellent games starting to appear. Rainbird has added a great deal to Starglider before releasing it on the

Amiga, and Psynosis is about to release a host of quality 68000 products. Bear with the machine, it will be worth it in the end.

Printing by Numbers

It is all very well me having my Amiga, and being able to produce incredible pictures using Delux Paint II, but how can I get colour hard copy? I have tried taking photographs but I continually get thick black lines across the screen, and I only have a Epson FX-80 printer. Any advice would be gratefully received.

Niall Stevens, Catford

Without wanting to turn this into a photographic magazine, this is a frequently asked question, and there have been quite a few differing answers. Personally, I feel the slower you can take the shot the better. Use a tripod, and open the aperture as far as possible. Then set the speed to around one second and shoot away. Generally these results are good, although the screen does tend to 'bend' at the corners.

Fast Flowing

One of the main uses of computers, is supposedly their ability to help you organise your life. Flow may be the software that will save writers of all kinds a lot of hassle.

By Anne Owen

Flow is a productivity tool, one of a new generation of software, often pioneered on the Apple Macintosh, which is designed to aid our creative processes. It is subtitled *Idea Processor for the Amiga Computer*. I have only ever had one good idea so this must be for me.

The disk is accompanied by a classy manual which is designed to go into your Amiga file. It displays all the features of a well planned document which Flow must surely have helped create. Every aspect of the software is dealt with in a step by step manner with reference to the example files supplied on disk. There is a reference section and index for the regular user and a strip of card with the function key operations clearly marked to lay across the top of the keyboard.

Flow can be used for mapping out your ideas for any project and I am completing this article in *Textcraft*, having transferred the framework of the piece from Flow. Don't judge the product by the quality of my writing, however! That might be unfair to New Horizons.

I could have used the Flow editor to write the complete piece but I preferred to take advantages of *Textcraft* to complete the review. So I used Flow to create an organised set of facts and ideas which I am now expanding upon. Nevertheless, Flow has some of the features of a wordprocessor with full screen editing and cut and paste facilities to help you get your written ideas into shape.

Processing

What can Flow do for your ideas? Quite a lot if it helps you lay them out in a logical order so that you and others can make the best of them. And that is what flow does when you create

what is referred to as an outline. It provides highlights such as bold text and indents to create a hierarchy of ideas. The main idea becomes a heading, its offshoots become subheadings and their offspring indented text. These blocks can be 'collapsed' into their sub or main headings only or expanded again to display all text on screen. A heading can be moved up or down in the hierarchy as your emphasis changes.

Once your ideas are formulated and categorised you can search the outline for a specified heading, you can find matching headings or sort the currently selected level of headings into ascending or descending order (alphabetic and numerical). These functions and the text editing functions can apply to the entire outline or just a selected part.

The outline can be printed out as seen on screen or in its full form. Highlights and indents are transferred to the hardcopy. Flow projects can be saved in their own format for safe keeping on disk but they can also be saved in a 'text only' format. In this form they can be transferred to other software packages such as a wordprocessor or page planner or despatched via electronic mail.

Flow is capable of holding pretty large outlines. The specification is up

to 32767 headings, 32767 indentation levels and a maximum of 200 characters per heading. So your first novel shouldn't be a problem.

The Best Ideas

Wordprocessors like *Textcraft* and *Scribble!* make the shunting of text and headings an easy matter without rekeying but, by providing a custom environment, Flow makes this haphazard on-screen design process so much more organised.

What I do find is that for short or less consequential pieces of writing, I jump straight into a wordprocessor, bypassing Flow. However, when something needs thinking through or the project is a large one, Flow is invaluable for creating a template with which to work. You can print out from Flow, consider your ideas at leisure and return to amend them until you are totally happy and ready to put flesh on the skeleton.

That's the writer's point of view but also bear in mind the database like search and sort qualities (demonstrated in a supplied Amiga magazine bibliography) and the very professional presentation you can achieve for, say a schedule, agenda or management brief. At first I considered Flow a bit of a luxury but it's one I wouldn't now wish to be without.

New Horizons is currently developing the *Pro-Write* wordprocessor and it will be interesting to see if an idea processing feature is incorporated or if that task is left in the capable hands of Flow.

Video Stars

One of the Amiga's many applications is in the field of graphic presentation. But how do you link your computer to your video recorder?

By Anne Owen

For combining computer and video the Amiga has no peers in the microcomputer world. Triangle Television, a company based just down the District line in London SW18, is pioneering the use of the Amiga with professional video equipment. Triangle is a production company with a background in video allowing supply of a complete package, including training in the art of making a video.

Jigsaw

Triangle is combining the A500 in the role of caption generator with a professional video setup produced by Unitron. The A500 supplied is a one megabyte version (using the *Alegria 512 RAM* card). The combination has been christened *Jigsaw*.

Included in the price is software such as *Deluxe Paint 2*, *Deluxe Video* and *JDK Images' Pro Video* software. *Pro Video* supplies a superb range of on screen fonts which are typed in and laid out in a full screen editor. Font and background colours are selectable. When the 'pages' have been completed, they can be strung together using a variety of special effects and delays.

The inclusion of the A500 helps make the *Jigsaw* video system very competitive. The package provides everything you need to complete a video including post production editing and mixing. The hardware includes camera, remote video tape recorder, two video tape players, MSX console and effects/caption generator (A500). Unitron's MSX (no relation to the micros) console already integrates many of the video production functions, such as preprocessing and signal stabilising, cutting down on the inconvenience of cabling and

interfacing. The future may even involve the Amiga in controlling remote video equipment as well as generating images. In the meantime, the latest three dimensional graphics generated using the Amiga will add to the special effects repertoire. There is also the promise of video and computer combination for games and entertainment in the not too distant future.

Training for Quality

The training support for purchasers of *Jigsaw* consists of up to four days working with the system and a follow up session at a later date (to "coerce" companies to learn). Through training, Triangle Television aims to make sure that these systems result only in imaginative, not "snoresville", videos!

Current customers include other production companies and colleges which train students in television and video production. Triangle sees the business sector as the biggest potential customer. With *Jigsaw* and a Triangle

training course, a marketing department should be able to embark with confidence on the creation of videos for publicity, exhibitions and their sale force. I recently bought a product after seeing a video demonstrating its qualities in my own home. Half the homes in Britain now have a video player so there is obviously great potential here. Current video production costs are high and the *Jigsaw* system could be paid for by just one in-house production.

For those who do not require the full production facilities, Triangle Television also supplies the A500 with various combinations of the equipment mentioned, right down to suitable software and genlock. There are also training courses on how to effectively use Amiga graphics software for video titling, starting at £95.

Video Jargon

Your Amiga quick guide to the video terminology now needed when talking about your Amiga:

Bang -	instantaneous appearance of screen
Checkerboard -	builds a display out of 'shattered glass' pieces
Fade -	colours fade to background colour
Pull -	the roller blind effect with the new screen scrolling over the top of the old
Reveal -	the old screen slides away to reveal the new one beneath
Roll -	the new screen pushes the old one aside as it scrolls into view
Slide -	the whole screen slides
Trickle -	the screen forms up as bits are randomly dropped into place, starting from the top of the screen
Wipe -	the new screen wipes away the old as it scrolls into view

MINDSCAPE from MIRRORSOFT

FOR YOUR AMIGA

"Cinemaware. . . , an extraordinary and incredible use of the Amiga's graphic qualities to make a game that just leaves you stunned." Amiga User.

Sinbad and the Throne of the Falcon

An interactive mystery and action thriller, designed to test the player's swordfighting mettle, quick wit, and ability to perform under pressure.

Defender of the Crown

An interactive movie tale of brave knights, beautiful maidens, jousting, swordfights and enemy castle sieges.

S.D.I.

A game of space combat with an exciting flight simulation, combined with romance, intrigue and heart-stopping action. And the fate of the world hanging in the balance. ▼

Deja Vu

Set in a sleazy underworld reminiscent of Raymond Chandler, this game allows interaction with almost everyone and everything on screen.

Uninvited

A high resolution graphics create a compelling Gothic setting which, combined with horribly realistic sound effects and sophisticated animation, will draw you into its complex web of mystery.

Balance of Power

A strategy game of geopolitics in the nuclear age. ▼

Available from all good software dealers or direct from us — UK only.

Sounds Fantastic

Amiga owners with musical leanings are on the look out for packages to aid their electronic expressions. Futuresound from Applied Visions has a lot to offer.

By Anne Owen

A major factor in the success of the Amiga 1000 is the audio hardware, a no compromise solution of digital to analogue conversion producing stereo sound, two 'tracks' per channel, four in all. The A500 is set to revolutionise the way we play our games. It's going to be a case of "off with the Walkman on with the Amiga headset".

The A500 and hi-fi will have to live together or some nifty 'tech trolleys' purchased. Would the Amiga technology have been chosen for the new generation of coin-op machines if the sound hadn't come up to arcade quality?

As well as pleasing the public, the Amiga helps programmers because, as with graphics, sound can be stored in an IFF format, a standard format interchangeable between software packages and sometimes even computers. So a library of sounds can be put to use in a number of different ways.

Which brings us to the creation of sounds. The audio hardware can be programmed to automatically retrieve sound data through four channels, each assigned to an eight bit digital to analogue convertor. That data can be set up by the programmer (with Basic SOUND and ENVELOPE commands for instance) or it can be generated by sound sampling. This is where the Futuresound product from Applied Visions comes in.

Futuresound provides the fast analogue to digital (outside world to Amiga) conversion to compliment the Amiga's D to A output. Futuresound

"digitises" sounds that it receives from one or both of two inputs. The first input is the microphone, which is supplied. The microphone is fairly sensitive, registering the normally inaudible purr of the Amiga 1000 fan. The second input comes direct from a sound producing device such as a radio tape or video recorder, compact disk, electronic keyboard and so on. You just plug the sound source into the auxilliary input of the Futuresound unit. If both sound sources are plugged in then a 'mix' will result.

The Futuresound box plugs into the Amiga via the printer port, providing a through connection for the printer, which now plugs into the Futuresound unit. A red button on the front panel indicates that Futuresound is active by lighting up. Pressing the button switches over to the printer.

Software Studio

The Futuresound software sets the Amiga up as a sophisticated four track digital tape recorder. Only one track can be recorded at a time but, once recorded, any combination of tracks can be played back.

The all important recording level is set by turning a knob on the front panel of the unit. The recording level is displayed on screen in much the same way as you might see it registered on the front panel of a tape deck. If the ideal level is superceded then the visual display jumps out of the box to alert you. The ideal recording is at the highest possible volume without

causing distortion or "clipping" - so called because the out of range frequency is clipped off and remains unrecorded. Once recording has started, the sound level display is suspended.

Each "moment" of the sound is stored as an eight bit number between -128 and +27. One sample is taken at a time and stored sequentially in memory. The rate of sampling is under software control, defaulting to 10,000 but capable of up to 28,000 samples a second. The faster the sampling rate the higher the quality, the more memory you use up and the shorter the recording time. It is up to the sound recordist to match the quality of the sound with its potential use. A sample rate of 7,500 is roughly equivalent to the quality provided by the telephone. I found that dialogue, either original or pinched from films or radio, reproduced more effectively than music.

The tape recorder analogy continues with editing (where all operations except for 'clear all tracks' apply to the currently selected track) and playback (where any combination of tracks can be activated). There are PLAY, STOP, Fast Forward and REWIND controls. The sound track is now graphically represented in a screen window through which you can pan sideways. This movement through the track is achieved in window sized steps, with FF and REWIND, by clicking in the window with the mouse, or a Byte at a time for precise positioning.

Editing in fine detail is catered for. A box displays the value of the sample at the cursor position. You may zoom in on the centre of the graph window and set start and end points within the track. Playback and special effects always apply themselves to the recording between the current start and end points. These can be reset from the TRACKS menu. Any part of the recorded track can be 'zeroed' or scaled up (louder) or down (softer).

Soft Sounds

The *Futuresound* software deals with the boring bits, the file handling, with reasonable efficiency. A data disk is created automatically from the menu by placing a 'soundfiles' directory on to it. As well as LOAD and SAVE, RENAME and ERASE are also available on a menu so that *AmigaDos* is avoided.

Loading and saving applies to the

Sounds Effective

The variety of inputs accommodated means that you can have fun mixing very different sounds for impact, singing birds and hammer drill for instance. There are numerous sound effects records available to experiment with as well as your own original sources.

Dialogue, especially in stereo, proved very effective but

Each track has its own volume control, an on/off gadget and a once/loop gadget. The latter is a source of continual inspiration. For instance you can make short sharp recordings of instruments on three tracks for playing in a loop and one long 'lead' recording on the fourth:
 track 1: loop "doo wop" chant
 track 2: loop bass drum beat
 track 3: loop snare drum beat
 track 4: once lead vocal

A simple technique for capturing a particular sound is to record for a few seconds, set the start and end markers around your chosen sound, allocate some memory in another track and copy the marked sound to it. Instead of copying to an empty (although with memory allocated to it) track, you can mix your first sound into an existing recording on the destination track.

selected track and takes one of three possible formats. The simplest is *Futuresound's* own format, size of file, sample rate and data. The other two are IFF formats, a 'one shot' for recordings that will be played back 'as is' and a three octave option designed for short sounds which will be used as musical notes. *Futuresound* works out the other two octaves which you don't have and, if specified in the graph window, will save a sound with two parts, one of which becomes the sustain element of the sound.

The latter format opens up the possibility of recording instruments under controlled conditions (perhaps with C-ducer style microphones), saving the samples and then incorporating the sounds into a piece of music or theme tune for a very realistic end product.

incorporating "speech" into other software is restricted by memory requirements. I don't expect this to stop the programmers achieving it however and the example programs supplied by Applied Visions in C and Basic will speed this process.

Futuresound is a professionally presented product, from the solidly built hardware to the neat manual with large type and clear diagrams. If your hobby stretches to £149, or sound sampling is something you need to achieve on the Amiga, then I am unaware of a better way of performing it.

Zing!

Software for the Amiga becomes more sophisticated by the day. Zing! has the potential to be a must for Amiga owners.

By Anne Owen

Meridian's *Zing!* is not an extension to the current CLI or Workbench. Rather it falls between the two, aiming to retain the user-friendliness of Workbench but unleashing the power of AmigaDOS. Meridian claims 1.25 man years work on the software, so how successful has the design proved to be?

Multi Useful

Zing! has the potential to be many things to many Amiga users. It fires on twin carburettors. Firstly there's the ability to move around directories and files on an AmigaDOS disk, carrying out DOS-like commands but without typing command sequences. Secondly, there are the utilities which 99% of Amiga users will find very useful indeed. I had personally been waiting for just such a set of utilities ever since I bought my Amiga.

Application packages for the Amiga often shut out AmigaDOS. If they are run from a CLI window then it is possible to return to that window to carry out a disk management before re-engaging in wordprocessing or pagesetting etc. *Zing!* gets around the problem in a much more direct way – the hot keys. The left Amiga key plus the function keys 1 to 10 are set up to, in order, bring up a file system window, a new CLI window, to save the screen to IFF files, to save the screen to printer, to set the screen dimmer time interval, to bring up the disk copy window, the format disk window, to set the *Zing!* defaults and to bring up the *Zing!* hot key window.

The heart of *Zing!* is the file system menu but the screen saver and disk management windows are real boons. The *Zing!* defaults are the abbreviated commands assigned to the 10 function keys used in the file system. In defaults

they can be changed to suit. You can also turn on and off case sensitive and advanced pattern matching – with which the manual deals in a rather obscure fashion. The task monitor is a bit of a gimmick but it is fun to watch the status information being updated as a number of tasks perform before your eyes.

Disk Filling with Frills

The file system window looks out on your disk files and directories and is packed with information. At the press of a mouse button you can get the current time and date (important when you are date-stamping files), the system memory available, the files and bytes in the directory on display and which page of the display you are on. You can click from page to page, size the window and scroll within it. At the bottom of the screen are the gadgets representing the current function key arrangement.

You can browse through the directories by double clicking on their names. Selecting 'parent directory' takes you back to the level above.

The 'change directory' window provides a set of device names (those not available are ghosted) to choose from, a requester for the directory name and a CD gadget to make the move. Double clicking on a device brings up a tree window with a list of available directories through which you can move before clicking on your choice. The pathname to the directory is automatically completed for you.

Double clicking on a filename brings up a file information window allowing you to perform rename, delete, edit, type (choice of *Ascii* or *Hex* with forward and backward paging), add a comment file and set the deletion protection flag. You can select

all the files on display for batch copying or deletion. Alternatively files can be matched to a pattern of characters or to before/since a date or day (eg DD-MM-YY, TUESDAY, YESTERDAY).

Hot Stuff

Zing! can display a file tree of any disk complete with a special notation to indicate which depth of directory relative to the root directory you have reached. Commands such as 'make directory' and 'install' can be quickly called up. The file system also provides copy, move, merge and rename functions with the same device gadgets and directory tree available for creating the relevant source and destination pathnames. As with AmigaDOS, comment files are not copied with files. Messages appear at all times to keep you up to date with the current operation. A 'continue or abort' message will appear if an operation proves impossible (e.g. a disk is write protected).

Sending files on to the printer is just as much a part of everyday computing as sending them to disk drives. The problem is that printers are slow devices and you have to wait around for them to finish. By selecting files for printing and then calling up the *Zing!* print spooler, you can set the print operation going and then literally place it in the background behind other operations you wish to carry out. The files will patiently queue for the printer's attentions without any intervention from you.

The *Zing!* file system displays the files as they are known to it. It is feasible that other operations may change the status of files so the 'update directory' option should be used to ensure that *Zing!*'s information is right

up to date. The fast sorted file display is made possible by 'zing' files, containing a form of indexing. These files are held on disk and you may wish to inhibit their creation on particular disks, a simple matter at the 'setting defaults' window.

Zing go the Strings of my Heart!

Zing! means that you needn't leave go of your beloved mouse although there is some typing of filenames and there are single key keyboard shortcuts and hot keys. The print spooler and screen dumps are invaluable as far as I am concerned but the file system is what you'll really buy *Zing!* for if you want an alternative to the CLI. I wouldn't call CLI 'mild mannered' as Meridian do, rather 'ill-mannered', making its master do all the work! *Zing!* takes over when the CLI sits back, letting you get more operations out of less typing, more information in less time.

Although *Zing!* duplicates many AmigaDOS commands, you probably won't want to dispense with CLI entirely - after all there are always

batch files to write. *Zing!* actually uses some AmigaDOS commands so your Workbench disk shouldn't be far away and if you have a single drive system then the *Zing!* command files will have to be transferred into the c directory. A good 'once-over' of the manual - which wasn't of the highest standard, although we are told it will be reproduced on a laser printer - is all that is needed since *Zing!* can be learned as you go along. Crib cards and documentation become redundant in most respects.

Zing! can come hotfoot into a wordprocessing session or a spreadsheet or into a programming language when normally you would have to go and find your CLI window, if indeed it proves possible to get back at all without closing down what you were doing. *Zing!* also comes to the rescue if non-Workbench files abound and you aren't about to learn all the CLI commands off by heart. In a perfect world Workbench would do all this. *Zing!* takes a more practical approach and succeeds in making

AmigaDOS a more viable working environment.

Meridian president, Jerry Farmer, tells us they plan to update *Zing!* on the advice of users, that they offer a technical hotline and respond to written enquiries. A further product *Zing!Keys*, an Amiga keyboard enhancer which enables the user to assign macro and hot keys, is now due for release.

Touchline:

Name: *Zing!* **Price:** \$79.95 (\$8.00 p+p).

Machine: Amiga. **Supplier:** Meridian Software.

New Start

The new version of *Kickstart* was creeping out into Commodore Amiga dealers at the time of writing. In the meantime software has been appearing with patches for 1.1 versions of *Kickstart*. *Zing!* however, is an example of new software which requires *Kickstart* version 1.2 to work, a potentially frustrating situation which users should be able to resolve by contacting a local dealer. YC

Programming the AMIGA?

THE LANGUAGES AND TOOLS YOU NEED ARE HERE - FROM METACOMCO, THE AUTHORS OF AMIGADOS

NEW MACRO ASSEMBLER

Professional macro assembler, this is THE assembler package for the Amiga Standard 68000 mnemonics, macro expansions over 160 explicit error messages, fully formatted listings, large range of directives, absolute, position independent or relocatable code and conditional assembly.

£69.95

NEW VERSION LATTICE C v.3.10

Enhanced C compiler, assembler and linker, now with more library functions and includes text management utilities.

£189.95

A feature packed Developer's version is also available which includes the above compiler, Make utility, screen editor and symbolic debugger.

£299.95

AMIGA SHELL

An enhanced command line interpreter to ease and speed up your development cycle. Contains Unix like features such as Command Line History, Command Line Editor, Aliases, Variables and Push and Pop directories. Also full documentation of Amiga CLI commands is provided.

£49.95

"If you do any programming you must buy Shell"
EXE - Jan 1987

MCC PASCAL

A fast and efficient ISO validated Pascal compiler generating native code, comprehensive error handling, 32 bit IEEE format floating point and full 32 bit integers.

£89.95

"The definitive Pascal compiler for the Amiga"
Amiga User - Dec. 1986

CAMBRIDGE LISP

An integrated LISP interpreter and compiler providing a complete Artificial Intelligence development environment with rational arithmetic, trig functions, floating point arithmetic, vectors, integers of any size and much more.

£149.95

"One of the most advanced LISP systems I have ever seen"
Amiga World - Feb. 1986

AMIGA TOOLKIT

An invaluable suite of program development utilities. Includes Disassembler, Pipes, Librarian, Pack and Unpack, Browse and AUX CLI. A package designed by the authors of AmigaDOS to extend the power of the operating system.

£39.95

"Likely to become one of the most used programming aids for the machine"

Your Commodore - Feb 1987

FutureSound™

“Open the pod bay doors, HAL...”

Programmers cast their vote!

Right now, leading software developers are hard at work on the next generation of Amiga® products. To add the spectacular sound effects we've all come to expect from Amiga software, they are overwhelmingly choosing one sound recording package... FutureSound. As one developer put it, "FutureSound should be standard equipment for the Amiga."

FutureSound the clear winner...

Why has FutureSound become the clear choice for digital sound sampling on the Amiga? The reason is obvious: a hardware design that has left nothing out. FutureSound includes two input sources, each with its own amplifier, one for a microphone and one for direct recording; input volume control; high speed 8-bit parallel interface, complete with an additional printer port; extra filters that take care of everything from background hiss to interference from

the monitor; and of course, a microphone so that you can begin recording immediately.

What about software?

FutureSound transforms your Amiga into a powerful, multi-track recording studio. Of course, this innovative software package provides you with all the basic recording features you expect. But with FutureSound, this is just the beginning. A forty-page manual will guide you through such features as variable sampling rates, visual editing, mixing, special effects generation, and more. A major software publisher is soon to release a simulation with an engine roar that will rattle your teeth. This incredible reverberation effect was designed with FutureSound's software.

Question: What can a 300 pound space creature do with these sounds?

Answer: Anything he wants.

Since FutureSound is IFF compatible (actually three separate formats are supported) your sounds can be used by most Amiga sound applications. With FutureSound and Deluxe Video Construction Set from Electronic Arts, your video creations can use the voice of Mr. Spock, your mother-in-law, or a disturbed super computer.

Programming support is also provided. Whether you're a "C" programming wiz or a Sunday afternoon BASIC hacker, all the routines you need are on the non-copy protected diskette.

Your Amiga dealer should have FutureSound in stock. If not, just give us a call and for £195.50 in cash with order we'll send one right out to you. Ahead warp factor one!

Amiga Games

There's nothing like sophisticated graphics and sound to enhance a game and the Amiga has both. But does the latest selection of games live up to this potential?

S.D.I.

Now we all know what nasty bounders those Russian chappies are. They only have one aim in life, and that is to bring about a state of global communism with as much vicious brutality as in inhumanly possible.

What a good thing it is then that we have our heroic American cousins who are bravely prepared to fight for truth, freedom, apple pie, and the American Way. In S.D.I., one of the first offerings in Mindscape's Cinemaware range (allegedly giving players a more 'adult' experience), you, dear reader, play one Sloan McCormick, Captain of the US Orbital Marines, whose task it is to save the human race.

This, it must be said, should be easily accomplished before lunch. It is simply a matter of preventing a group of 'KGB-led fanatics' from starting a nuclear war. The redoubtable McCormick must destroy all KGB attack fighters, defend America from missile strikes, and rescue his beautiful Russian lover from a 'barbaric KGB torture squad'.

Judging by the picture in the accompanying booklet, I

would be tempted to leave her to her hideous fate, and nip off in my Starfighter for a couple of Budwiesers.

Although the scenario is one of the worst I have ever read, the actual game isn't quite that bad. Admittedly there is very little gameplay, but countered against that are some spectacular graphics and sounds that would not be out of place in Star Wars. The animation too is excellent, particularly during the section where little user participation is necessary.

Overall, S.D.I. is a very American game. To describe it as gung ho would be the biggest understatement of the year. If you can ignore the politics you might find a good game, I just couldn't keep going for that long. G.D.

Touchline

Name: S.D.I. **Supplier:** Mindscape. **Machine:** Amiga. **Price:** £39.95.

Originality: 6/10. **Graphics:** 6/10. **Playability:** 5/10. **Value:** 4/10.

Uninvited

Mindscape, the company that brought such adventure classics as *Deja Vu* and the *King of Chicago*, has combined again with Alert, to create a new classic, *Uninvited*. Gamers familiar with *Deja Vu* will immediately feel at home. Lots of windows, full mouse control, and lavish descriptions all add up to create a game which is the computer equivalent of a good Dashiell Hammet novel.

In this particular game, you take on the role of a car crash victim, left alone in the countryside, with only a large house in view. As you approach the house, which in fact turns out

to be more of a gothic monstrosity than a semi-detached, an eerie feeling comes over you, one which is forcefully confirmed when the front door slams shut (and locked) immediately after you enter.

Walking around the house, it became clear that this is by no means your average bed and breakfast, especially with shadows lurking in every corner. To make the most of the feeling of impending doom, Mindscape has included a whole host of digitised sound (most of which are stereo on the Amiga) ranging from creaking doors to horrific screams – sounding something like me when forced to watch Bullseye.

The graphics are not spectacular, particularly by Amiga standards, but they do serve their purpose, which is to add the feeling already created by the text. This is not a game for inexperienced adventurers. It may be simple to play, but it is not easy to beat. Many hours spent with my mouse and I have still yet to beat the maze, a part of the game which is so infuriating as to have forced me to turn the machine off in a rage!

One American sci-fi magazine voted *Uninvited* the equivalent of an Oscar, and it is obvious why. The game is a classic of the graphic-adventure genre. I am never one to knock British adventures, but this game puts into the shade all but the very best Level 9 and Magnetic Scrolls games. If you like adventures, you had better not miss *Uninvited*.

G.D.

Chessmaster 2000

Every computer needs its chess game and Chessmaster 2000, by the Software Toolworks, is the outstanding offering for the Amiga. There are two elements to the computer chess game, the aesthetic and the practical. Chessmaster scores highly on both.

A beautifully presented game, Chessmaster almost overkills on options. Choose two or three dimensional display, rotation of the board, board co-ordinates on or off, voice, music, bell or silence. The pieces are finely drawn. Swap between wood or metallic finish, define all colours precisely with slider controls.

The display is a joy to look at and all the options are selectable from pull-down menus. In general, Chessmaster is impressively programmed in the Amiga style. It's fast too, often continuing to play computed moves while the player chooses a menu option.

You can choose your opponent, human or Chessmaster or watch an autoplay game. You can choose to play black or white, to show captured pieces or to have chess clocks on screen. Newcomers have their own style which forces 'easy mode' on. There are normal coffee house and best move styles and you can have the 'opening book' on or off. You can choose from levels one to 12 (level 1: 60 moves, five minutes; level 12: one move, 6000 minutes). During play you can force the computer to make a move, take a move back or replay it.

You move a piece by dragging it into position with the hand icon. Grey silhouettes will indicate possible valid moves, turning red to indicate a possible capture. Chessmaster won't let you make an invalid move. You can file away your own games on disk (load, save and erase) and there are an amazing 100 games in the 'classic games' directory for retrieval and move by move replay or analysis.

Those who like to get serious about their chess will be happy to learn that Chessmaster does too. Chessmaster 2000 was winner of the 1986 US Open personal computer chess championship.

Each game is recorded so all moves can be replayed, taken back and analysed from any position. An analysis can be saved to disk, moves displayed or printed out as you play, or on completion of the game. You can set up any position, ask for suggested moves and best variations. Chessmaster will solve to mate for either player or give an indication of how long you've got left! You can even watch Chessmaster 'thinking' although this display obscures too much of the board for my liking. I'd prefer to have both.

Chessmaster has the range of options to keep the serious beginner, occasional player or club competitor happy. Bill, Raymond and Jeremy could happily use it to liven up chess analyses on television and I bet Gary Kasparov would like to get his hands on an Amiga for his Black Sea chess centre!

STARBOARD

THE memory board for the Amiga. Not only does the Starboard come in 1MB and 2MB versions (supplied with or without chips), but with the addition of the multifunction module you have all these extra features:

68881 (Maths processor)

Battery backed clock

RAM cache (keep your RAMdisc or programme when you reset/crash the amiga)

Parity Logic

PRISM

Prism is the first graphics programme on the Amiga that allows you to use Hold And Modify mode allowing you to draw with 4096 colours on screen at a time!

TV*Text

Text presentation programme for the Amiga enabling you to use any number of fonts on screen at a time printed at 8 different orientations, different shading effects, mixing of graphics and text and lots more. Phone for demo disc.

Executive Amiga

Does the Amiga live up to its claims to be a business machine? And if so, is there sufficient software support?

By Anne Owen

Is it, or isn't it? The A2000 is supposed to be and the A500 is supposed not to be. I'm talking of course about 'a business computer'. Commodore, embarrassed by the combination of graphics and sound (games) and multitasking operating system (business), have sorted out their marketing by splitting the A1000 into two.

The A2000 now has Amiga and IBM slots capable of taking, respectively, business peripherals and processors able to run traditional business software. We are yet to find out if this latter feature is just a get out clause for those who never lost their jobs by buying IBM. And does it matter anyway as long as it sells Amigas?

In the meantime those of us who need no excuses have been getting to know some of the excellent software available for the Amiga office. All of it will run on the A500 as well as the A1000 and A2000.

Workers Unite

Many computers have desktops. On the Amiga you sit at a *Workbench*. The *Workbench* has the available tools laid out on it. If *Analyse!* spreadsheet is in one disk drive and your disk titled 'Spreadsheet Data' is in the other then two disk shapes (icons) with these titles will appear on screen.

To click on an icon you place the mouse controlled pointer over it and you press the left mouse button twice. If you click on the *Analyse!* disk it will open a window and display its

contents, the program itself, any utilities associated with it and any data neatly stored away in named 'drawers'. Each item has its own icon picture so you can't mistake its purpose. To check the contents of drawers you click on the appropriate icon. A further window will appear with its files and perhaps more drawers to open and inspect. A filing cabinet by any other name but no need to move from your bench!

When you click on a program icon, say the *Scribble!* word processor, it will create its own working environment on the screen. *Scribble!* has its own pull-down menus, a place to type your work and requesters to ask you what you want to do next, the name you wish to give your text file and the drawer to put it in when you save it. Everyone, however little they know about computers, will be able to use a package like *Scribble* within minutes. Online 'help' files mean that only the finer points of use will have to be looked up in the manual (which is nevertheless extremely comprehensive). The *Plan* series of software and

Grafox's *Logistix* both feature disk based help files. So Amiga business software presents a friendly face.

More Than Two Hands

The Amiga is capable of running more than one such program at the same time. With the 512K machine this is more showing off than practical. More useful and more lively, you will want to run a menial task like backing up a drawer of valuable files while continuing with your spreadsheet or database. If you are running *Analyse!* or *Organise!* or *Superbase*, all you have to do is reduce the size of the window containing the program and click in the *Workbench* screen which is revealed behind. You can create a backup drawer by simply renaming an empty drawer icon. Now click once on your drawer (full of files) and, holding down the left mouse button, drag it over to the drawer named 'backup'. At this point you let go of the left button. *Workbench* now knows that you want to copy one drawer into the other. You can now return to your previous task, resizing the window again as required.

Workbench is very easy to use but it has its weaknesses. Suppose you wanted to print a document or series of documents. There is no printer icon on the *Workbench* to which you could move your document drawer. Programs such as *Scribble!* will help you out with printing tasks but some are not so helpful and you may have to learn some *AmigaDos* commands or turn to a utility such as *Zing!* which provides printing in the background.

Office Soft

All the major business applications are available for the Amiga. The new 2.00 version of *Scribble!* from Micro-Systems Software is now a very good wordprocessor and can shoulder the hard work demanded of this essential office tool. The mail merge feature is neatly implemented although more information about how to interface it with database files would be helpful. The spelling checker, with a 30,000 word dictionary and a simple way to 'teach' the dictionary new words, is fast enough to encourage its regular use.

Scribble! also proves the real usefulness of multitasking by allowing the writer to have up to four documents open on screen at the same time. The cut, copy and paste tools all work across the documents so you can combine the hard thought-out wording of your sales brochure into your latest mailshot by just copying it over.

A range of paper handling and text formatting commands can be inserted into the text, variable strings inserted automatically from specified disk files or prompts generated for input from the keyboard. These features are the key to the modern requirement of 'personalising' correspondence. Now all you need is a laser printer to do justice to the different styles of text that you can see on screen. Styles can be changed at any time without rekeying.

Still with Micro-systems Software, the *Analyse!* spreadsheet makes excellent use of the Amiga's user interface. I find it very easy to both enter data and manipulate the layout using the mouse as a pointer. You can insert and delete columns and rows simply by making a selection with the mouse. Labels can be set out over multiple column widths for legibility. Moving and copying is achieved by wielding the mouse and paint roller icon to highlight the data required and pointing to where it should go. Dead easy.

Keyboard "/" commands" and pull-down menus provide access to the functions. *Analyse!* features a large array of functions, a macro language for automating your work and a neat set of graphs which are generated from selected data sets. The graphs are controlled from a pull-down menu in *Analyse!* and do not require a separate

utility. The business person will find the software easy to get used to and the excellent manual will guide them into the more powerful features. Its 200 pages, spiral bound, immaculately typeset with example screens, glossary, index and appendix on the latest features. It reflects the all round quality of *Analyse!* and I was most impressed.

Superbase is the main contender in the database stakes and we previewed it in the first *Your Amiga*. Its special ability to handle external files containing graphics is not the only factor that sets it apart in quality from other database software so far encountered. There are a variety of ways provided to display your data as well as sophisticated searching, sorting and indexing functions.

Because it's the Amiga, it's worth looking at business presentation graphics. If you want to take presentation graphics a step further than the integrated graphs of *Analyse!* then *Aegis Impact* is designed for you. It provides a whole range of graph types to represent your data. Other paint packages do have clip art to help the creation of graph images but *Impact* is purpose designed. Once the images are created, you can 'program' a slide show to display them.

There remains the problem of presenting the finished product. The computer itself may not always be available. The *Polaroid Palette* is an expensive solution if 'one off' graphics are required. A company that is already producing business graphics on slide, from a client brief or from IFF format supplied screens, is Phoenix (Tel: 0733 76896). Triangle Television (01 874 3418) will even help you produce a video if that's what is required. A colour printer is expensive for a one-off but a model such as the Xerox gives remarkable results if hard copy is a requirement. A cheaper alternative is the Okimate 20.

Communications

A quick word on electronic mail, now a very real requirement of a business computer. The Amiga can shine in this department with a number of public domain programs to give you a taste and with *A-talk* the outstanding commercial program from America. *A-talk* will combine with the appropriate modem to take you on to

Telecom Gold or One to One and will help automate the process of dialling and logging on. If you want to access American electronic databases then *A-talk* is ideal.

Data

Data integration remains one of the weak points of the Amiga compared to some of its (much more expensive) rivals. As yet there is no 'clipboard' for cutting and pasting data between programs.

An interesting feature for the business user is the ability to incorporate data from IBM compatible software. A special program can read the data and write it back to an Amiga format disk. *Analyse!* has a 'load Lotus 123' option for such circumstances. It's very 'round the houses' by this method. The A2000 tackles the problem seriously with its 8088 co-processor and offers cut and paste between *MSDOS* and *AmigaDOS* as they operate side by side in separate screen windows.

One further problem which you might encounter as an Amiga executive is the storage media. The 3.5" disks are robust but the Amiga drives seem especially unforgiving. Frequent backing up of data is essential. Note that both *AmigaDOS* and *Workbench* rely on program code stored on disk. A single drive system will require the frequent swapping of disks. If you foresee large amounts of data being handled by your business application then look seriously at a hard disk from the beginning. Like *GEM*, *Intuition* is made for hard disk.

Listings

*Get it right first time with our deluxe program system
for the C64.*

You may have noticed that our listings are free of those horrible little black blobs which send you searching around the keyboard for a suitable graphic symbol. You may also have noticed the funny numbers by the side of each line of the listing. Fret no more, it's all part of our easy entry aid.

Instead of those nasty graphics and rows of countless spaces in PRINT statements and strings we use a special coding system. The code, or mnemonic, is always contained in square brackets and you'll soon learn to decipher their meanings.

For example, [SA] would mean type in a Shifted A, or an ace of spades in layman's terms, and [SA10] would mean a row of ten of these symbols.

[S+2] means hold down the shift key and press the plus key twice. It doesn't take a great leap of logic to realise that [C+2] means exactly the same thing except that the Commodore key (bottom left of the keyboard) is held down instead of the shift key.

If more than two spaces appear in a statement then this will be printed as [SPC4] or, exceptionally, [SSPC4]. Translated into English this means press the spacebar four times or in the latter case hold the shift key down while you do it.

A string of special characters could appear as:

[CTRL N, DOWN2, LEFT5, BLUE, F3, C3]

This would be achieved by holding

down the CTRL key as you press N, press the cursor key down twice, the cursor left key five times, press the key marked BLUE while holding down the CTRL key, press the F3 key and, finally hold the Commodore key down while pressing the number two key (C2 would of course make the computer print in brown).

Always remember that you should only have a row of graphics characters on your screen with no square brackets and no commas, unless something like this appears:

[SS],[C*]

In this case the two characters should have a comma between them.

On rare occasions [REV T] will appear in a listing. This is a delete symbol and is created by entering the line up to this mnemonic. Then type a closing quotation mark (SHIFT & 2) and delete it. This gets the computer out of quotes mode. Hold down CTRL and press the number nine key (RVSON), type the relevant number of reversed T's and then hold down CTRL and press zero (RVSOFF). Next type another quotation mark and delete it again. Now finish the line and press RETURN.

A list of these special cases is given in the table but remember that only one of these mnemonics will appear outside of a PRINT string: the symbol for pi. This may appear when its value is needed in a calculation so this may look something like:

:CC=2*[PI]*R:

Ignore the square brackets and just type in a shifted upward pointing arrow (ie. the pi symbol).

Checksum Program

The hexadecimal numbers appearing in a column to the left of the listing should not be typed in with the program. These are merely checksum values and are there to help you get each line right. Don't worry if you don't understand the hexadecimal system, as long as you can compare two characters on the screen with the corresponding two characters in the magazine you can use our line checking program.

Type in the Checksum Program, make sure that you've not made any mistakes and save it to tape or disk

immediately because it will be used with most of the present and future listings appearing in Your Commodore.

At the start of each programming session, load Checksum and run it. The screen will turn brown with yellow characters and each time you type in a line and press the RETURN key a number will appear on the screen in white. This should be the same as the corresponding value in the magazine.

If the two values don't relate to one another, you have not copied the line exactly as printed so go back and check each character carefully. When you find the error simply correct it and

press RETURN again.

If you want to turn off the checker simply type SYS49152 and the screen will return to the familiar blue colours. You can then do whatever it was you wanted to do and if this doesn't use the area where Checksum lies you can go back to it with the same SYS command.

No system is foolproof but the chances of two errors cancelling one another out are so remote that we believe our listings are more reliable than any other magazine in the world. So get typing!

Coin-Op Conversions

Many of the most popular computer games were originally designed for arcade machines. We look at some of the most memorable old favourites and bring an update on the latest in this area.

By Tony Hetherington

Computer games as we know them began life in the arcades and since then the software houses have often taken their leads from their coin-op cousins. It all started at an easy pace with *Pong* providing the game that sold many home game machines. Then came *Space Invaders*, *Asteroids*, *Breakout*, *Defender* and *Pacman* with conversions appearing for all micros including the C64 as both computers and coin-ops discovered colour (the early coin-ops had black and white screens with coloured strips stuck over them). Now C64 owners can get their own copy of games like *Nemesis*, *Paperboy* and *Gauntlet* and even video disk games such as *Dragon's Lair*!

Most coin-op conversions are surprisingly good when you consider that the arcade machines have hardware and graphic specifications that would put the Amiga to shame such as a 68010 processor and about two megabytes of memory!

Elitism

One software house that has made its name in coin-op conversions is Midlands based Elite, well known for chart

Paperboy

Marble Madness

busters such as *Commando*, *1942*, *Ghosts and Goblins*, *Bombjack* and, of course, *Paperboy* and *Space Harrier*.

Paperboy is one of my favourite coin-ops and my first call whenever I'm in an arcade. The unique gameplay consists of delivering copies of *The Sun* to subscribers while avoiding an army of drunks, skate boarders, motorists, workmen and animals that are determined to wreck your BMX bike. You can tell the difference between subscriber's houses and the others as your readers have bright clean houses whereas the others are dark, cobweb ridden hovels and you even get bonuses for breaking windows by hurling your papers through them. I wonder how many other people practise on the computer game so they can amaze them in the arcades.

Bombjack was in fact a bigger hit on the C64 than it was in the arcades and has prompted a sequel. Unfortunately, *Bombjack II* restricts the leaping hero of the original to straight left, right, up and down movements and the game to a limited platform game.

Space Harrier is perhaps one of Elite's most ambitious conversions since the C64 can't hope to match the coin-op's stunning graphics. Although these look like a poor pale

Gauntlet

imitation, the game retains the frantic flavour of the ultimate shoot 'em up.

Commando was the first controversial coin-op conversion as *Elite* took a dim view (and threatened legal action) over Alligata's *Who Dares Wins II* which was surprisingly similar to and the gunho gameplay of this 3D shoot everything that moves game. This was the first coin-op to be officially licensed instead of a general free for all with the closest to the original attracting the threat of a lawsuit from the likes of Atari taking out full page ads to threaten everyone. In the end *Commando* topped the charts (*Who Dares Wins II* didn't) proving the original will win in the end.

Cloning

Two other games that suffered similar clone fever were *Marble Madness* and *Gauntlet*. These two hotly pursued licences, both resulting in amazing games, had to fight off clone competition launched before the official versions. At one point, it seemed that the market would be saturated with marble games such as *Spindizzy* (Electric Dreams) and *Gyroscope* (Melbourne House) and *Gauntlet* games such as *Storm* (Mastertronic), *Dandy* (Electric Dreams) and *Druid* (Firebird). But both official games did remarkably well, with *Gauntlet* taking the lucrative Christmas number one position.

Sport Simulations

Sports games have been few and far between in the arcades but those that have appeared have had a dramatic effect on the software houses. Melbourne House captured the flavour of coin-op kung-fu games in *Way of the Exploding Fist* and started a craze that has lasted three years. It has since been followed by official conversions of *Yie Ar Kung Fu* (Imagine) and *Kung Fu Master* (US Gold).

The greatest influence has got to have been Konami's *Track and Field* that first sparked off the joystick waggling athletics that lead to *Daley Thompson's Decathlon* (Ocean), *Decathlon* (Activision) and of course the Epyx quartet of *Summer Games*, *Summer Games II*, *Winter Games* and *World Games*!

Atari's coin-op gold amazed the world and challenged programmers to create true 3D views of the course. This

challenge was taken up by Ariolasoft who produced the incredibly accurate *Golf Construction Set*, in which you play on four real courses, and the hit and hope games of *Leader Board*, *Leader Board Tournament* and *Leader Board Executive*, imported from Access by US Gold.

Graphic Displays

The most spectacular coin-op conversions must surely be *Dragon's Lair* and its sequel *Escape from Singe's Castle*. How could a humble C64 hope to mimic a video disc machine capable of producing cartoon quality graphics? The result was surprisingly accurate, helped by the simple gameplay in which left and right joystick movements decided whether the hero, Dirk the Daring survived another stage to rescue his princess or got fired, chomped, crunched or pummeled in the attempt. Curiously, I found the sequel to contain the more familiar screens including the perilous ride down the whirlpools and rapids, a frantic trip on a flying horse and a chase down a tunnel with a giant boulder just behind you.

Old Favourites

Just when you thought that things were progressing nicely via *Pong*, *Asteroids*, *Kung-fu* games, *Gauntlet*, *Paperboy* and *Dragon's Lair*, *Breakout* makes a comeback!

One of the early coin-ops is back as *Arkanoid*. Revamped, rewritten and reworked. The task of hitting a ball with a bat to break down a wall has become a lot harder as aliens get in your way and some bricks don't break but give you unusual features such as a double bat and glue makes the ball stick to the bat. Ocean has done the official version but Gremlin has produced a clone in *Krakout* that adds screen after screen of bricks that are patrolled by more active aliens that not only deflect the ball but also paralyse your bat and some even eat the ball and spit the bits at you!

Arkanoid

Infinite Variety

Indoor Games (Advance) features a compilation of indoor sports such as 10 pin bowling and darts and also air hockey, a machine that lurks in the corner of most arcades. The object of this amazing game is to guide a puck that hovers on a cushion of air into your opponent's goal without smashing your knuckles. Incredibly the computer version captures the

gameplay, the speed and smooth movement of the machine but without the pain.

There are one or two computer games that have actually managed to travel against the flow out of the arcades and have been converted into coin-op games! Broderbund's *Choplifter* was a hit on a variety of machines, including the C64, before it moved into the arcades where it was revamped and improved and is now almost unrecognisable thanks to its superior graphics.

The coin-op version of Activision's *Pitfall!* actually consists of a mixture of *Pitfall!* and its sequel *Pitfall 2* with added erupting volcanoes, lightening and other graphic effects.

Not many games make this transition as they have to be good enough to encourage people to pay 20p for a game (even though they might already have the computer version) and be quick enough to pack as many games (and 20ps) as possible into a day.

The coin-op conversions continue with three this month, *Nemesis*, *Express Raider* and *Gauntlet the Deeper Dungeons*.

Nemesis

Nemesis, an Earthlike world is under all out attack from its ancient enemies the bacterions. To save them you pilot the prototype Warp Rattler space fighter and duel to the death with the bacterions.

Your objective is the bacterion superfortress but first you will have to battle past screens and screens of enemy snakelike ships, gun towers, fighters, exploding rocks, tailed monsters and mother ships that have to be blasted four or five times down their central shoot before they shower you in missiles.

The action is based around bizarre landscapes in which deep space gives way to built up ships, strange pipe constructions, walls that must be blasted, platforms with giant heads and bone structures complete with grabbing skeletons.

As you seek revenge you'll be able to collect power capsules that wipe out the nasties on the screen and others that can be used to improve the Warp rattler. Collect enough and you can increase the ship's speed (and avoid a lot of trouble), equip the ship with air to surface missiles, double the fire power of the cannon, replace the cannon with a laser, protect the rattler with a shield and add up to two sidewinders. These have the same firepower as the rattler and form a tail behind your ship.

One of the best shoot 'em ups you're ever likely to play.

Touchline

Title: *Nemesis*. **Supplier:** Konami. **Machine:** C64.

Originality: 4/10. **Playability:** 9/10. **Graphics:** 8/10. **Value:** 8/10.

Express Raider

The wild west comes to your C64 in the conversion of the Data East "get the train" coin-op.

Bouts of Kung-fu are punctuated by gunfights from horseback as you battle to get to the front of the train. The Kung-fu takes place on top of each carriage in which you must punch and kick gun firing guards, shovel wielding stokers, assorted cowboys and coyotes (?). The battle must

be won within a time limit otherwise a life is lost which means the pressure is on particularly against one opponent who hides behind a pile of boxes that must be punched and kicked away before you can tackle him.

On horseback you must shoot seven passengers in each carriage to advance to the next level. This isn't as easy as it sounds as your intended victims hurl bullets and knives at you.

Express Raider is somewhat disappointing and has nothing new to offer as it's little more than yet another Kung-fu game. Isn't it time for something a little different?

Touchline

Title: *Express Raider*. **Supplier:** US Gold, Units 2/3, Holford Way, Holford, Birmingham B6 7AX. **Tel:** 021 356 3388. **Machine:** C64.

Originality: 2/10. **Playability:** 5/10. **Graphics:** 6/10. **Value:** 3/10.

Gauntlet - The Deeper Dungeons

When the four player roleplaying action of *Gauntlet* appeared in the arcades the owners had to stop people playing the game so they could go home at night. It was also the first machine to have a slot to take the pound coin as players shovelled money in to keep their character alive.

The game was successfully converted for the C64 and included all 512 levels. Now here's the sequel and another 512 levels for Merlin the wizard, Questor the elf, Thor the warrior and Thyra the valkyrie to explore and plunder.

The deeper dungeons load in from the original game (which you must have) and feature the same combination of monsters, magic and mayhem in which the players must fight ghosts, goblins, deaths, lobbers and sorcerers to get to treasure, potions and invisibility amulets.

Some of these new levels have been designed by Gauntlet players as entries in a design a dungeon competition and are particularly nasty. For example, one screen begins with a duel with six deaths, another an assault by lobbers and all have an unhealthy stock of poisoned food.

If you enjoyed the original *Gauntlet* (if not, why not?) then you'll relish another 512 levels which could be training for things to come as *Gauntlet II* is now in most arcades.

Touchline

Title: *Gauntlet - The Deeper Dungeons*. **Supplier:** US Gold, Units 2/3, Holford Way, Holford, Birmingham B6 7AX. **Tel:** 01 356 3388. **Machine:** C64. **Price:** £4.99.

Originality: 4/10. **Playability:** 9/10. **Graphics:** 7/10. **Value:** 9/10.

Coin-op conversions will continue to top the charts as more and more games join the ranks on your C64. The next big game is likely to be *Quartet* from Electric Dreams, a four player *Gauntlet* style science fiction game which will be joined by *Super Sprint* for car racing fans.

US Gold is preparing a trio of conversions featuring the heroics of Indiana Jones in *The Temple of Doom*, the cartoon capers of *Road Runner*, as he escapes the attempts of Wile E. Coyote to turn him into fast food, and finally *Metro Cross* which is a desperate race against time across an assault course packed full of springs, giant wheels and spiked holes that try and separate you from your trusty skateboard. ☺

ABACUS SOFTWARE PRODUCTS from ADAMSOFT

CADPAK Enhanced Version! For C-64 or C-128

CADPAK is a superb tool for computer aided design and drawing. Using either the keyboard or optional lightpen you draw directly on the screen to create and edit pictures, drawings, layouts and renderings—quickly, accurately, creatively. The new dimensioning feature allows exact scaled output on your designs. Choose from the menu options and draw on the screen at an exact location using our AccuPoint cursor positioning. Using the two graphics screens, you can draw LINES, BOXES, CIRCLES, ELLIPSES; fill with solid colors or patterns; freehand DRAW; COPY sections of the screen; ZOOM-in to do detailed design on a small section of the screen. With CADPAK's improved object editor, you can define and save furniture, electronic circuitry or machinery as intricate as the screen resolution permits. Hard copy to most dot matrix printers. Perfect for all your design needs.

For C-64 £24.95
For C-128 £34.95

Lightpen (optional) £12.95

CHARTPAK For C-64 or C-128

CHARTPAK lets you make professional quality charts fast—without any time-consuming programming. Enter, edit, save and recall your data, then interactively build your pie, bar, line chart or scatter graph. You specify scaling, labeling and positioning. CHARTPAK instantly draws the chart in any of 8 different formats—you can change your format immediately to draw another chart type. Other features include statistical routines for average, standard deviation, least squares and forecasting. You can also use data from spreadsheets such as Multiplan, Calc Result or Basicalc. CHARTPAK records your final results on Commodore 1525 / MPS-801/1526, Epson, Gemini, Okidata (including OKIMATE 10/color) or C Itoh Prowriter dot matrix printers.

C-64 version £24.95 C-128 version £34.95

The C-64 versions work at 320x200 resolution and the C-128 versions at 600x360 resolution. CHARTPAK screens can be read by CADPAK for further enhancement if required.

COBOL for the C-64 and C-128

Now learn this universal
business language on
your Commodore 64 or
Commodore 128!

COBOL is the most widespread business programming language in use today. Now you can run this easy-to-use, English-like language on your C-64 with the easy-to-learn COBOL System package. The COBOL System features a syntax-checking editor, interpreter, compiler, and a number of symbolic debugging aids; a crunch function to reduce the memory size of your programs; a print on/print off feature, and much more. Includes sample programs to help you learn as you go, as well as a complete 150-page manual.

Both versions on 1 disk £34.95

★★ SPECIAL OFFER THIS MONTH ★★:

If you purchase two or more software packages from this advert you may deduct 10% from the total cost.

SUPER C Language Compilers for C-64 or C-128

One of today's most popular languages, C is excellent as a development tool, produces 6502 machine code—and it's very easy to transport C programs from one computer to another. Our compiler makes full use of this versatile language; it includes an editor, compiler, linker and handbook. The powerful editor lets you create source programs containing 80 character lines, and features horizontal scrolling. Your source program can be up to 41K in length, 53K in object code. The linker lets you combine up to seven modules for later as a BASIC look-alike program. This really is a Super package.

★★SPECIAL OFFER★★

Both versions on 1 disk for only £34.95 limited stocks at this price

SUPER Pascal Development System for C-64 and C-128

SUPER Pascal is a complete development system for Commodore 64 and 128 computers. It implements the full Jensen & Wirth compiler plus extensions for graphics—and has a complete source file editor, a full assembler, and a comprehensive utility package. Our powerful program features high-precision 11-digit arithmetic; a very fast compiler; overlays; automatic loading of editor and source program; exact error messages and localization during compilation; complete statistics reporting; high speed DOS (3 times faster than the 1541's); free runtime package, and much more.

The 128 version supports 40 or 80 column mode. FAST or SLOW speed. Extra commands. RAM disk option, and 80 column hires graphics.

For C-64 £34.95
For C-128 £44.95

All software products are on disk.

Free postage on U.K. and overseas surface mail orders. Add £3 per item for airmail. We stock the entire range of Abacus software products and books. Send SAE for catalogue. Generous dealer terms available. Access (not VISA) or Transcash orders accepted. (a/c 687944007). Add £1.50. C.O.D. Callers by appointment.

The Mystery of Arkhan Manor

This month Melbourne House has supplied some great prizes for 21 lucky readers.

The *Mystery of Arkhan Manor* is a detective game which will tax all your wit and courage in an attempt to solve numerous puzzles.

We are offering a first prize of a pocket colour camera in our special spot the difference competition.

The winner will also receive a copy of the game, which has just been released by Melbourne House, and 20 runners up will also be able to try their hand at the mystery.

How to Enter

Study the two cartoons, there are several differences between them. Mark the differences on the second picture and complete the entry coupon. Send the picture and the coupon on the entry coupon. Make sure that you write the number of differences that you found on the back of your envelope. Entries without a number on the back will be disqualified.

The Rules

Entries will not be accepted from employees of Argus Specialist Publications and Melbourne House. This restriction also applies to employee's families and agents of the companies.

The how to enter section forms part of the rules. The Editor's decision is final and no correspondence will be entered into.

Arkhan Manor Competition Entry Coupon

Please send your entry to: Arkhan Manor Competition, *Your Commodore*, 1 Golden Square, London W1R 3AB. Closing date: Friday 31 July 1987.

THE FINAL CARTRIDGE II®

THE GREATEST UTILITY EVER FOR THE COMMODORE 64/1281

£39

FREEZER

- ★ **MENU DRIVEN**
16 SUB MENUS
Colour changes
4 resets
Centronics/serial screendumping
Print vector setting
Tape to disk. Back up
Disk to tape. Back up
Back ups are packed files on tape or disk.
including their own fast loader and starter
- ★ **GAME KILLER**
Kills sprite to sprite and or sprite to
background collision
- ★ **COMFORTABLE EXTENDED M.L.**
MONITOR
INCLUDING:
Relocated load. Scrolling up and down.
Bankswitching, printing
MONITOR DOES NOT RESIDE IN RAM!
INCLUDES DISK DRIVE MONITOR
★ **FREEZER SWITCH**

- ★ **DISK TURBO**
6 times faster disk access - loading and saving
- ★ **TAPE TURBO**
10 times faster - compatible with standard
turbos

- ★ **KEYBOARD EXTRAS**
Pokes and Syscalls in Hex. Type command
operates your printer as a typewriter
- ★ **RESET SWITCH**
Resets all protected programs

- ★ **24K EXTRA RAM FOR BASIC PROGRAMS**
AVAILABLE
Two new commands "Memory read"
"Memory write". They move 192 bytes with
machine language-speed anywhere in the 64K
Ram of the CBM 64. Can be used with strings
and variables.

- ★ **PREPROGRAMMED FUNCTION KEYS**
Run, Load, Save, Catalog, Disk commands.
List (removes all list protections)

- ★ **ADVANCED CENTRONICS**
INTERFACE
Compatible with all the well-known centronics
printers and Commodore printer programs.
Prints all the Commodore graphics and control
codes (important for listings).
Including screen-dump facilities. Prints Low-
Res. Hi-Res and Multicolour. Prints Low-
from games and paint programs, like Doodle,
Koala Pad etc. Searches automatically for the
memory address of the picture.

- ★ **BASIC 4.0 COMMANDS**
like Dload, Dsave, Dappend, Catalog, etc.
- ★ **KEYBOARD EXTRAS**
with Auto, Renum (incl. Goto and Gosub).
Find, Help, Old, etc.

**SPECIAL OFFER TO
YOUR COMMODORE

BLUE CHIP DISK DRIVE

The Blue Chip BCD/5.25 is a 100% Commodore compatible Disk Drive. Works with Commodore C64, C128, SX64, Plus 4, and Vic 20. With its external power supply you will no longer lose your programs due to overheating. Smaller, quieter and more efficient. Runs 1,000's of programs written for Commodore Computers. Compatible with Final Cartridge II.
ONLY £177.00 incl.

FLOPPY DISC BARGAINS

**3.5" disks only £16.00
per box of ten. OR £30.00
for twenty.**

DISC BOX

Lockable 3.5" disc box.
Holds 90 discs .. £12.50

OR £11.00 if ordered with
ten or more 3.5" disks.

FLOPPY DISK BARGAINS

Have we gone crazy??? Just look at these prices! Top quality 5.25 floppy disc with a 100% Guarantee. Complete with labels and write protect tabs.

JUST £6.00 per box of ten. OR
£10.00 for twenty. Hurry while
stocks last.

EPROM PROGRAMMER

Now an Eprom programmer that's within the reach of most pockets. The Mico-Prommer V.1.0 fits neatly into the cartridge port of the C64/C128. It will program 2716 (2KB), 2732 (4KB), 2764 (8KB), and 27128 (16KB) Eproms. Complete with software and instruction. ONLY £53.45 incl.

Eprom Eraser to go with the Micro-Prommer. Can erase up to 30 Eproms in 3-4 Minutes.
ONLY £52.45 incl.

CITIZEN 120D PRINTER

Fast 120 cps in draft mode and 24 cps in NLQ mode. Supports both Epson and IBM Graphic characters and modes. We recommend this printer for use with the Final Cartridge. We supply the 120D complete with Centronics interface and printer lead for Commodore C64/C128 computers. Up to 240 dots per inch in Bit Image Mode.
ONLY £230.00 OR Complete with Final Cartridge II £260.00. Please add £5.00 for carriage.

CENTRONICS PRINTER CABLE

Commodore 64/128 user port to centronics printer cable. The cable is fitted with a line feed switch for use on Epson type printer. No more taking the printer apart to change the line-feed. Recommended for use with the Final Cartridge. Compatible with Superscript and Superbase etc.
ONLY £15.00 incl.

SERIAL EXTENSION CABLE

Extend your Disk Drive or Commodore Printer cable by up to 2 meters.
1 Metre Cable £6.00 incl.
2 Metre Cable £8.00 incl.

DISK NIBBLER

Use both sides of your disk. Save the cost of the nibbler with just one box of disks even at our prices.
£5.00 incl.

Programmers Package

Speedipen and Programmer's Utilities are two new products from JCL Software. Do they come up to scratch?

By Allen Webb

JCL has recently launched two new software utilities. *Speedipen* is a word-processing package whilst *Programmer's Utilities* brings you three different ways to improve your own programs.

Speedipen

As implied by its name, *Speedipen* is a word processor package. It was originally available on disk but has now been converted to cartridge. The area of word processors is fraught with difficulties since, in my experience, a word processor is a very personal item about which one readily evolves preferences and prejudices. It is, therefore, difficult to review a word processor objectively. At under £20, *Speedipen* is clearly in the budget area and must be considered in that light.

The one virtue of cartridge based software is that it boots up automatically without bother or delays. *Speedipen* is in this category and after a mildly self-indulgent opening display, an opening Help screen appears.

On first impression it seems that no effort has been spared to make help readily available so that you can perform most general functions without constant recourse to the manual.

Facilities

The big pain when using a WP on the 64 is the limitation of 40 character screen width. Software writers tend to adopt one of two solutions:

1. The edit screen uses 40 character

- width but you can preview text in its correct form before printing.
2. The use of What You See Is What You Get (WYSIWYG) format with the screen acting as a window on the document.

Speedipen uses the latter option in a fast and effective manner. My personal preference is for the first approach, mainly because it makes the check reading of the document simple. It's really a question of taste.

The author of *Speedipen* seems to have adopted a happy balance when it comes to the features embodied in the package. The usual options for text format are available; justification, centering, tabs, word wrap.

Markers which show where the pages start and end are provided but there are no options for adding footers or headers. The usual options for moving and deleting blocks of text and word searching are also provided.

One welcome feature is the provision of a built in Centronics driver which allows the use of parallel port printers without aggravation. My main grouse is the repeated request for information during data handling and other options. Whilst I applaud the provision for drive numbers for those with twin disks, a global hardware option would reduce key pressing.

As a budget WP, this package has most of the options I would expect. It

is both fast and efficient without any obvious bugs and I would recommend it to anyone wanting to start handling text in a serious manner.

Programmer's Utilities

To someone, such as myself, who enjoys hunting through public domain and similar compilations of software, the next item offered great attraction. This is a collection of three programmer's utilities. I should add that these are definitely not public domain.

There are three machine code utilities, two to aid Basic programming and one to aid machine code programming. First we have an item called *Stepping Stones*. This is a machine code monitor of sorts which allows you to step through code so that bugs can be identified. Traps based on register values can be set and you can identify subroutines which, since you know they are bug free, can be skipped at normal speed. Whilst this is useful, it does lack features which would make it more valuable. I would have liked the options to disassemble code, read

tables of ASCII values and change portions via a simple assembler. There are a number of excellent products in this field offering stiff competition, and on its own, *Stepping Stones* doesn't quite make it.

The next item is called *Spritey*. This is an interrupt driven routine which makes control of sprites trivial. When your program is running, the routine scans five integer arrays and acts according to the values to position the sprites, colour them etc. The sprite designs are actually held within the code and a rudimentary sprite designer is provided. It does seem possible, however, to access other designs by directly changing the sprite pointers. I loved the method of controlling the sprites but disliked the sprite designer.

The adopted approach is to place the machine code starting at the normal start of Basic and to raise Basic above the code. This means that you can easily integrate the code in your program.

Finally, we have a snippet called *Baby Business Basic*. Those who wish to write business software such as databases will encounter the need to

input a lot of data in an idiot-proof manner. Where you have a formatted screen, the code (in Basic) to input data from the various fields used is large. This item is a machine code bundle which provides many such functions via simple commands. The commands include inputting from specific fields, setting up fields, getting bomb-proof inputs and file handling. The syntax of the commands are generally simple allowing you to write involved programs easily. I found this item to be the best of the bunch and very handy.

Overall, I had one big complaint. The instructions were supplied via a large HELP program and commented demos. I prefer an instruction booklet. If you are in the middle of a large program, the last thing you want is to load a demo or other program and, by use of a pencil and paper, try to sort things out. At £18, this package is also a touch pricey.

Tech draw 64

A comprehensive technical illustration aid for C64 owners for both disk and tape.

As you should know, *Your Commodore* is always on the look out for high quality programs to publish in the magazine. However, some programs that we think are excellent may never appear in print due to their enormous length. With **Tech Draw 64** we are pleased to announce the birth of *Your Commodore* Software. This is an extension of our Software Service which will make high-quality programs available to our readers at a reasonable price. And **Tech Draw 64** is the very first program to be offered through this service.

Tech draw 64 is a comprehensive technical illustration aid, utilising the high-resolution mode of the C64. The program is either disk or cassette based and permits output to a selection of Commodore printers.

The program's ability to measure line lengths and angles allows geometric shapes to be drawn quickly and accurately. This together with precise copy and rotation features permits complex details to be constructed easily.

Once a drawing is completed it may be saved to disk or tape (depending on the version of the program) for future recovery and update.

For users requiring colour, there are a number of options existing. Photography of colourful drawings is therefore possible.

In Use

The main menu of **Tech Draw 64** offers the following options:

- create drawing;**
- return to drawing;**
- save drawing;**
- load drawing;**

print drawing;
help (list functions).

The **create drawing** option takes the user of the program to the drawing screen. The main cursor appears in the centre of the screen and is accompanied by two edge cursors which move along the horizontal and vertical axes.

These axes are graduated at intervals of eight pixels, so dividing the hi-res screen into a grid corresponding to the normal text screen. The axes and edge cursors can be used to position a drawing or to position drawings for colouring.

At the top of the screen is the prompt line; this is where you will be prompted for inputs, etc, by the program. The right hand edge of the prompt line contains a *vector box*. This

is used to give the user information on the length and angle of parts of the drawing in process.

Moving around

A joystick is used to move the cursor around the screen. Two speeds of movement are provided. *Fast* mode allows you to move around the screen quickly, while *slow* mode allows you to position the cursor with accuracy.

Plotting a point

All operations within the program are based around points. For example to draw a line, two points are plotted and the line command is used to join them together. Plotting a point requires only a single keypress; you will soon get the

hang of defining points for each of the commands. Some commands, eg plotting an arc, require more than two points to be plotted on the screen.

Since the point plotted is quite small, just a single pixel, you may quite rightly think that positioning the cursor on a specific point is quite difficult. This is where the auto-cursor comes into play: This allows you to define up to nine different points on the screen and then jump the cursor around them by simply pressing the relevant key 1 to 9.

Functions available

Line draw - this requires two points to be plotted, the two ends of the line. Activating the line command gives you the option of drawing or erasing the line or, in case you make a mistake, abandoning the operation;

Rays - the **Line** command draws a line between two specified points. Rays is similar but draws several lines from the same original points;

Box - rectangles are a common feature in any technical drawing. **Box** allows

such shapes to be drawn without having to resort to drawing each line individually. A box is drawn from two points which are to make up opposite the corners of the box; the command causes the box to be drawn with horizontal and vertical sides so as to join the two points;

Circle - two points are required in order to draw a circle. One point should be the centre of the circle and the other is any point on the circumference;

Arc - uses three points to produce an arc rather than a complete circle. Two versions of this command exists: either you specify the radius of the circle and the two ends of the arc; or you specify the ends of the arc and one point in between;

Ellipse - as you would expect, this draws an oval shape on the screen. Two points are required for the generation of an ellipse. One is the highest point on the ellipse the second the 3 O'clock position (the ellipse is always drawn with its axis horizontal or vertical);

Freehand - allows you to draw on the

screen freehand style. You can either draw or erase in freehand mode;

Fill - as its name suggests fills a closed figure with the current ink colour;

Hatch - in technical drawing a series of parallel diagonal lines are used to show a shaded area. The hatch option allows you to alter the width between the lines in a hatch operation;

Text - allows you to label and caption any illustrations that you may produce.

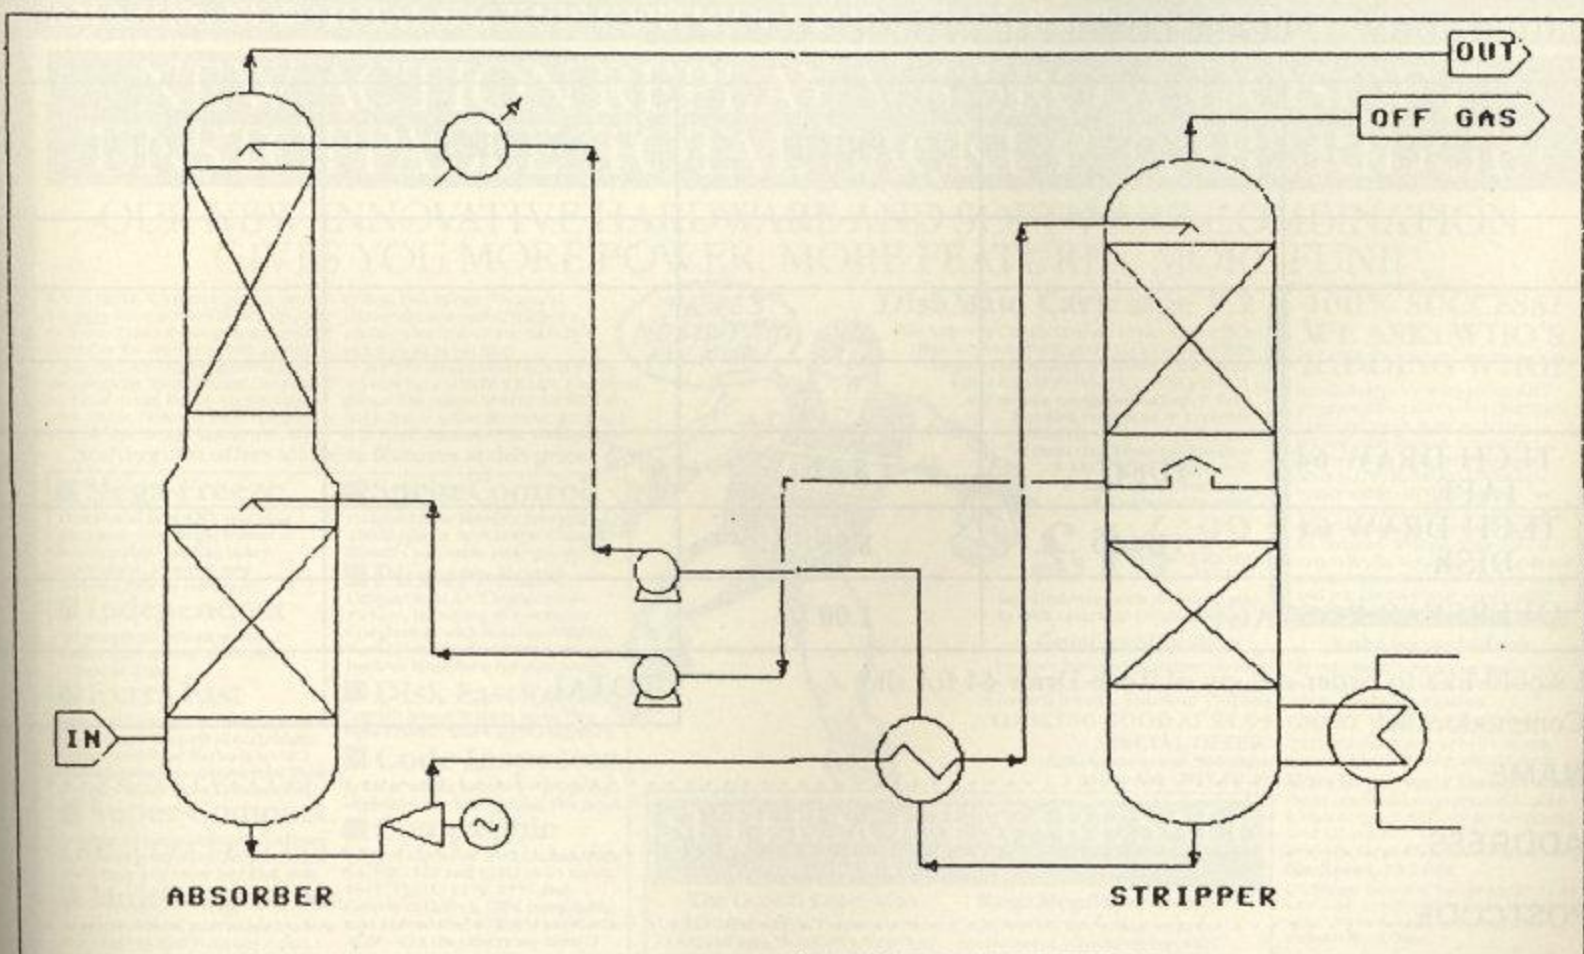

Block functions

A block function is one which allows you to carry out specific operations on a rectangular area of the screen. The block is designed, as for a rectangle, by plotting two points; you then select the operation you want.

The following operations are available:

Wipe - this is used to clear the defined block from the drawing;

Copy - this allows you to place a copy of the specified block elsewhere on the screen. Uses might include duplicating shapes, such as electronic symbols, at

This simple flowsheet is a composite of four screen drawings. The screen axes and edge cursors are used to record the positions of the linking lines from one section to another.

different areas on the screen. You can place the originals for regularly used symbols around the sides of the screen leaving the centre free;

Move – this is similar to **Copy**, with the difference that this operation moves the specified area to a new point on the screen, deleting the old area;

Rotate – this function permits a block to be rotated through any angle about a defined centre of rotation.

Colouring it in

Even though **Tech Draw 64** is mainly designed with technical drawing in mind, some users will want to use colour in their designs.

Tech Draw 64 allows you to specify the colour of the ink that you are using and the background colour. Local colour allows you to alter the background colour under the cursor to the one specified. Only two colours, foreground and background, per character square are allowed because of the limitations of the C64's hardware in hi-resolution mode.

The ink colour of any rectangular block on the screen can be changed

with the re-ink block function.

Once you're done

As previously mentioned, provision exists to **SAVE** your finished masterpiece onto either tape or disk, depending on the version of the program that you are using. The printer option allows you to reproduce your drawing on either a Commodore 1526 printer, or an MPS 801/803, or compatible.

In the case of 801/803 you will have the choice of either large or small print-out.

The 1526 printer option produces small but accurate copies of your drawing. It is rather slow, since it has to re-define the character to be printed as the drawing is reproduced.

What to do

Tech Draw 64 is an extremely powerful drawing package, especially suited to users who need to produce accurate drawings and technical illustrations. The program is available only from *Your Commodore* and comes complete

with a manual explaining each command in much more detail than we can go into here.

The cost of the program is £8.95 for both disk and tape versions, and this price includes package and postage. Orders for the program should be on the form at the foot of this article, and should be accompanied by a cheque or postal order for £8.95 made payable to Argus Specialist Publications. Overseas readers should add a further £1.00 Sterling to cover the extra postage.

Orders should be sent to the Readers Services address on the form **NOT** to the *Your Commodore* editorial address.

More to come

As mentioned before **Tech Draw 64** is the first of a series of high-quality programs that we will be making available to the public, but which are too large and would require too much documentation to publish in the magazine as a listing. Watch this space for future offers!

AMAZING NEW 'TOTAL BACKUP' CARTRIDGE FOR COMMODORE 64 AND 128 (IN 64 MODE)

NEW ACTION REPLAY V.3 FROM DOSOFT UNSTOPPABLE 'TOTAL BACKUP' CARTRIDGE

OUR NEW INNOVATIVE HARDWARE AND SOFTWARE COMBINATION
GIVES YOU MORE POWER, MORE FEATURES, MORE FUN!!

Action Replay V.3 is now more powerful, has more features and will back up more programs than any competing cartridge! It handles the latest protected games!

Just plug it into the expansion port then press the Magic Button! Our new hardware design makes this absolutely unstoppable. Now you are in complete control. Tape to tape. Tape to disk. Disk

Nothing else offers all these features at this price!

■ Mega-Freeze

Freeze and save ANY working program—the Magic Button is unstoppable—unlike other cartridges. Also it is now undetectable by software!

■ Independent

All programs reload without cartridge—and at turbo speed—tape or disk.

■ Extra Fast

Make all backups at Turbo Speed—much faster than rival cartridges. Dual speed Tape Turbo is up to 3 times faster than commercial Turbos.

■ Super Compact

Intelligent compacting techniques minimise program size into single files. Save 3 or more per disk side.

■ MultistageSaves

Transfers MORE multistage loaders from tape to disk than any other. And all parts Turbo load—another feature unique to Action Replay.

■ So Easy to Use

Action Replay V.3 is a delight to use. All functions described on screen. No user knowledge is required.

to disk. Disk to tape. No special knowledge is required. It tells you exactly what to do. It's so friendly—and it's a lot of fun too!

Become invulnerable! Action Replay V.3 now has a SPRITE KILLER. Play weird games! The unique SPRITE MONITOR lets you save sprites from one game and load them in another! The mind boggles!

■ SpriteControl

Unique Sprite Monitor lets you disable them. Save them! Change them! Customise your games!!!

■ Picture Save

Unique! Save ANY Multicolour Picture, including title screens. Compatible with Blazing Paddles, Koala, Graphic Slideshow etc. Built-in Slideshow for tape users.

■ Disk Fastloader

Superb bonus feature loads five times faster. Takes up NO memory.

■ Code Inspector

Look at whole memory—program, registers, etc. Everything you need.

■ Compatible

Fully compatible with Commodore 64, 64C, 128 and 128D in 64 mode, 1541, 1541C, 1570, 1571 and Enhancer Drives, CBM compatible tape recorders, FastDOS, and Turbo ROM—can the others say that???

£29.99
GET MORE FOR LESS!

Buy Action Replay with DiskMate in ONE cartridge ONLY £39.99

Action Replay and DiskMate are also available from Datel Electronics

DiskMate Cartridge V.2

This is the way Commodore should have their DOS. Single keystroke commands: e.g. LOAD and RUN straight from directory; and much, much more!

Works with all drives: 1541, 1570 and 1571.

- 2 minute complete Backup
- Very fast disk functions
- Invisible Toolkit
- 10 second Format
- Powerful 'Floating' Monitor
- SAVE "bug" bug cured
- Takes up NO memory
- Unstoppable reset

£14.99
TERRIFIC VALUE

Buy DiskMate with Action Replay in ONE cartridge ONLY £39.99

Graphics Slideshow

View pix from games, graphic packages or loading screens singly or in sequence. 16 pictures per disk. Turbo load. Disk only.

LOOKING GOOD AT £4.95

SPECIAL OFFER!

Enhancement and Slideshow on one disk ONLY £11.95

100% SUCCESS? WE ASK: WHO'S KIDDING WHO?

Action Replay V.3 will back-up ANY program which ANY other cartridge can—and much more! It also has unmatched features. For instance, 'Freeze Frame' uses more disk space, saves SLOWER, has a SLOWER tape loader and has NO built-in disk fastloader, NO picture, NO Sprite, NO restart-features, yet costs £10 more!!! So, come on, who's kidding who? If Action Replay V.3 doesn't live up to our claims, return it within 7 days of receipt and you can have your money back!

Enhancement Disk

Get even more from Action Replay with this Bonus Disk to back up the new non-standard multi-stage loaders.

GREAT VALUE AT £7.95

Our cartridges carry a twelve month guarantee against mechanical failure.

How to get your DoSoftware

Please send cash/cheque/P.O. with order for fast despatch (SAE only for full details). Send off now to:
DoSoft (Dept YC), 2 Oakmoor Ave, Blackpool, FY2 0EE

UK Postage included. Europe add £0.75, or £2 if order includes Blank Disks. Overseas add £1.50 for Airmail, or £3.50 if order includes Blank Disks.

You'll Do it Better
with DoSoft

SUPER SOFTWARE SALE

Buy NOW and SAVE! SAVE! SAVE!

The DoSoft Collection

UNBEATABLE OFFER! The latest versions of MegaTransfer, MegaUtility, MegaTape and ProSprite ALL on One Disk

HALF PRICE £12.50 WOW!

DoSoft Super Disk Kit

AS ABOVE but with 12 Xidex Precision Boxed Disks. A great start to get your programs on disk at a giveaway price!

SAVE! SAVE! SAVE! £19.99

Mega MegaTape Savings

OUR FAMOUS Tape-to-Tape utility for one Datasette at an unbeatable price.

BUY NOW £5 BRILLIANT!

Xidex Precision Disks

From the WORLD'S LEADING SUPPLIER—12 Double Sided, Double Density 5 1/4 Disks complete with sleeves, labels, tabs and FREE high impact plastic storage box

TWELVE FOR ONLY £8.50!

FAST DISK UTILITIES • LOADERS • 2-MIN DISK COPY • FAST DISK FILE COPY • FAST FORMAT

Programmable Function Keys

Have you ever wished that you could make more use of the function keys on your C64? This utility could be what you've been waiting for.

By D.J. Baker

The function keys on the C64 are extremely useful for selecting options within a program and are easy to detect. However, on many computers it is possible to store strings of characters in memory so that when the key is pressed a specified operation is carried out. Even though the C64 has function keys, for some silly reason Commodore didn't provide a simple way for you to use them in this fashion.

This program will allow you to store up to 30 characters, commands etc. in memory so that C64 owners can now have access to true programmable keys. In use function keys are an invaluable and time saving tool. You could for example define a key so that a press of it will LIST your program, or even LOAD a program off of disk or tape. In fact the possibilities are endless.

Getting It In

The program is presented in the form of a Basic loader and should present you with no difficulties when entering. Do make sure that you have read the LISTINGS page and are using the Syntax Checker to aid your typing. When the program has been entered make sure that you SAVE it before you RUN it. Once the program has been RUN type NEW and then SYS 52224 to start the Function Key program.

In Use

The keys F1 to F6 can all be defined as function keys. You can store a string of up to 30 characters in each key. When you press the key the characters will be reproduced as if you had them on the keyboard.

PROGRAM: FUNKEY LOADER

```

F7 is used to call the key define routine and F8 is used to clear a definition. When you press F7 or F8 you will be prompted for the key that you wish to define or clear. When the relevant key is pressed an asterix "*" is displayed to show that the press has been registered. You should now type in the text that you wish to be stored in the key. Use the left arrow key to end a definition and the combination of shift and space to delete characters.

Any key presses that would produce a reverse graphic in a print statement, CLR, HOME etc. will have their symbol displayed as a left arrow in the definition. Keys may be re-defined at any time by repeating the definition procedure. Any keys that have not been defined or have been cleared will be ignored whenever they are pressed.

For those interested, the program starts at memory location \$CC00 (52224) and a buffer at \$CE00 upwards holds your definitions. The IRQ vector at \$0314/5 is altered to point to this routine.

IF YOU THINK THE 64 IS ONLY A GAMES MACHINE. THINK AGAIN!

Polynomial

A NEW AND EXCITING METHOD OF STUDY FOR THE COMMODORE 64/128

Polynomial is the first program of its kind which offers a DYNAMIC way of learning and studying. However it is not one of those boring question and answer types of Educational Software. Polynomial allows you to put the questions and helps you find the answers. Students of all levels from all subjects could find Polynomial an INVALUABLE AID to their studies.

WHAT DOES POLYNOMIAL OFFER YOU?

Polynomial combines 3 powerful number crunching routines with an EXCITING GRAPHICS facility to form one of the most powerful educational software packages available for the Commodore 64/128.

- **ROOTS** — Solves linear and non-linear equations and can find both real and imaginary roots. Results can be verified using the powerful GRAPHICS module.
- **CURVE FITTING** — Calculates polynomials to fit a set of data points. Helps you interpret your data and solve the awkward experiments QUICKLY and EFFORTLESSLY. Plot both the data points and the resultant polynomial on the same screen.
- **SIMULTANEOUS EQUATIONS** — Can solve up to 34 simultaneous equations easily and efficiently. Equations clearly formatted on the screen. Solutions are calculated in seconds. Enormous potential as a problem solver.
- **GRAPH PLOTTING** — This extremely POWERFUL module has INCREDIBLE potential for learning. Plot results of all your experiments draw graphs of your polynomial equations and their DIFFERENTIALS, as many as you like all on the same screen. These are plotted on a high accuracy, high-res screen, choose double or single axis graphs.

THIS EXCELLENT PACKAGE IS IDEAL FOR CSE, 'O' LEVEL, 'A' LEVEL AND DEGREE STUDIES AND CAN BE YOURS FOR AS LITTLE AS £14.95 — UNBELIEVABLE VALUE!

Price INCLUDES detailed manual in an attractive protective case. Postage and Packaging FREE.

SEND FOR YOUR COPY NOW!

CALC 64

For those annoying little sums that you can't do in your head, CALC 64 will speedily come to your aid.

By T. Lansbury

Unless you own one of those nifty computer calculators, it can be annoying and troublesome to break off writing a program to check the result of a calculation. If you are using Basic, then a direct mode statement can often give you the answer. When the calculation is lengthier, then a short stand-alone routine can sometimes suffice.

If you are writing machine code, then additions, subtractions and logical operations should have been confirmed before the code is entered at the keyboard. The use of a monitor such as the excellent ZOOM is to be recommended. Logical operations can be checked by a short routine, written in a spare part of memory, ending in a BRK instruction.

But you cannot beat the convenience of a fast calculator for such work.

The Program

CALC will give you this facility, at the touch of a key. It is a handy, instant result calculator that performs operations on real (floating point) numbers and will also handle computer arithmetic. Additions, subtractions, shifts, rotates, logical operations, can all be done by pressing the relevant command key.

When installed, the F1 key calls up CALC, where the last result can be seen and noted, or printed on the screen for use in your program.

CALC has two menus. Each menu is a four-line "duck-shoot" menu at

the top of the screen. The information that originally occupied those four lines is saved to memory and restored upon exit. The top two lines of each menu contain the commands and the third line displays the calculator total so far. Line four is the guidance line and is a fuller description of the current command.

In Use

When CALC is first entered, the first menu is displayed with the command ZERO highlighted. Use of the cursor keys will take the highlighting to further commands. The cursor keys can be used in either direction, and there is full wrap-round to both ends of each menu. Pressing RETURN then executes the selected command.

When the commands are familiar, there is a quicker way to use CALC - just press the initial letter of the required command, and that command will be executed immediately without having to press RETURN.

Commands

When CALC is first entered the following commands are available:

ZERO: Sets the floating point total to zero.
PLACES: Sets the number of decimal places displayed (range: 1-8).
ADD: Add number to total.
SUBR: Subtract number from total.

MULTIPLY: Multiply total by number.

DIVIDE: Divide total by number.

RESULT: Prints result to the screen and exits CALC. The result is printed at the cursor position when CALC was entered, and the cursor is repositioned on the line below the result.

INTEGER: As with Basic's INT function - removes the fractional part of the total.

FRACTION: The opposite of INT - removes the figures before the decimal point, leaving the decimal fraction only.

6510ARITH: Access to second menu.

QUIT: Quits CALC and returns to Basic. The F3 key can also be used to quit CALC: This enables the user to snatch a quick look at the results so far, and then exit by pressing the next nearest function key.

Entry to the second menu presents the following commands:

ZERO: Zero accumulator.
NEW: Enter number into accumulator.
PLUS: Add with Carry.
MINUS: Subtract with Carry.
INCRT: Increment accumulator.
DECRT: Decrement accumulator.
TOTAL: Print conversion line on screen and exit CALC.
0-C: Clear the Carry flag.
1-C: Set the Carry flag.
AND: Perform logical AND.
ORA: Perform Inclusive OR.
EOR: Perform Exclusive OR.
SHIFT: Shift left or right.
ROTATE: Rotate left or right.
FIRST: Exit to first menu.

Entering the Program

CALC sits in the \$C000-\$CFFF (49152-53247) block of memory. Type in the program exactly as shown, save and then run it. The program will poke the data statements into memory, checking for typing errors and illegal quantities as it goes. The line number will be printed in the event of an error. If all is well, insert a disk into the drive and press RETURN. CALC will then be written to disk and can be loaded for future use by LOAD "CALC",8,1. When CALC has loaded, type NEW RETURN, followed by SYS49152. CALC is then ready for use.

If you do not have a disk drive, change line 1170 to read: SAVE "CALC",1,1.

From Woodworker, Britain's leading woodworking magazine ...

make your home more secure:
doors, windows, alarms, fire
precautions and child proofing—
it's all in this invaluable do-it-
yourself manual.

At your newsagent **NOW!**
or order direct for **£1.50 + 50p**
p&p from *Infonet, 10-13 Times*
House, 179 The Marlowes, Hemel
Hempstead, Herts. HP1 1BB.

Software for sale

If you think that one of our programs looks very interesting, but you can't afford the time to type it in then our software service will help you out.

It's three o'clock in the morning. You sit at the computer keyboard just finished a marathon typing session entering one of the superb programs from *Your Commodore*. Your fingers reach for the keyboard and press the letters R, U and N. You press RETURN, sit back and nothing happens.

Everyone has probably faced this problem. When it does happen it's a matter of spending hours searching through the program for any typing mistakes. No matter how long you look or how many people help you, you can usually guarantee that at least one little bug slips through unnoticed.

The *Your Commodore* Software Service makes available all of the programs from each issue on both cassette and disk at a price of £6.00 for disk and £4.00 for cassette. None of the documentation for the programs is supplied with the software since it is all available in the relevant magazine. Should you not have the magazine then back issues are available from the following address:

INFONET LTD, Times House, 179 The Marlowes, Hemel Hempstead, Herts. HP1 1BB.
TEL: (0442) 48435

please contact this address for prices and availability.

The Disk

Programs on the disk will also be supplied as totally working versions, i.e. when possible we will not use Basic Loaders thus making use of the programs much easier. Unfortunately at the moment we cannot duplicate C16 and Plus/4 cassettes. However programs for these machines will be available on the disk.

What programs are available?

At the top of each article you will find a strap containing the article type, C64 Program etc. So that you can see which programs are available on which format you will also find a couple of symbols after this strap. The symbols have the following meaning:

This symbol means that the program is available on cassette.

These programs are available on disk.

Please Note

Since the programs supplied on cassette are total working versions of the program, we do not put disk only programs on tape. There is no sense in placing a program that expects to be reading from disk on to tape. VC

FEBRUARY 1987

TURBO MENU MAKER — Add menus and high speed loading to your disks (C64 — disk only).

HEX DATA ENTRY — Your Commodore program entry system.

X-RAY FILE — Get more information from your disk drive (C64 disk).

ADVENTURE AID GRAPHICS — Easy graphics for our Adventure Creator system.

LABELLER 64 — Easy addressing with this label printer for the C64.

WORD PRO ADD ON — Add descenders to your MPS 801 printouts with the Plus/4 word processor.

NURSERY RHYME LAND — An educational adventure for the young ones.

ORDER CODE

DISK YDFEB87 £6.00

TAPE YCFEB87 £4.00

MARCH 1987

SPELLING CHECKER — for use with the Plus/4 word processor — disk only.

NINE LINE MATRIX — Clearer 80 column displays on your C128.

JOYSTICK READ — Invaluable joystick routine for Basic programmers with a C64.

LABELLER 64 — See February 1987.

HEX DATA ENTRY — Our machine code easy entry program for C64.

WIMPS AND MUCH MORE — An extension to our C64 Wimps program plus a foolproof INPUT system.

DISKIT — Memory Saver, Program Compressor and One Part Maker. The first three parts of this popular series for C64 and disk (Disk only).

NURSERY RHYME LAND — See February 1987.

POPPER — A game featuring Popper the green pea, for the C64.

READERS SERVICE

Order codes

DISK YDMAR 87 £6.00

TAPE YCMAR 87 £4.00

APRIL 1987

CRIBBAGE – A computerised version of this popular card game. Plus/4, disk only.

DISKIT 4 – A protection program to look after your C64 programs. (Disk only).

DISKIT 5 – A machine code to DATA statement convertor for C64. (Disk only).

C128 KEYPAD MODIFIER – Make your numeric keypad more useful where entering data.

LETTER WRITER – A novel way to send musical letters to your friends. (C64).

DOUBLE PRINT – The bigger the better. Give your C64 double height characters.

ORDER CODE

DISK YDAPR87 £6.00

TAPE YCAPR87 £4.00

MAY 1987

LOWER CASE GRAPHICS – Using lower case text on your C16 and Plus/4 graphics screen. (On disk only).

C16 CHARACTER EDITOR – A powerful character editor for the C16 and Plus/4. (On disk only).

EVERYMAN'S GUIDE TO GRAPHICS – All of the programs from this fascinating article.

C64 SPRITE EDITOR – A comprehensive sprite editor for the C64. Available for both disk and tape.

CEDIT 64 – A character editor with no fewer than 44 different commands. (Available for tape and disk).

ORDER CODE

DISK YDMAY87 £6.00 TAPE YCMAY87 £4.00

JUNE 1987

DUAL PROGRAMMING – Have two programs in your Plus/4's memory at once. (On disk only).

EMULATOR 64 – Machine code single stepper for the C64.

SMART LISTER – Make your listings smarter and neater with this program. (C64).

PROCEDURES – Easier programming for the C64 with this program.

C64 SOURCE GENERATOR – A powerful disassembler for the C64.

LIST ENHANCER – Improve the LIST command of your C64.

ANALYSER – A machine code debugger for the C128.

Two from Adamsoft

Adamsoft has imported some impressive Abacus software from the US, in the past. Read on to see if the two latest offerings match up to the standards already set.

By Paul Eves

SALES BREAKDOWN BY COLOR

12/38/85 RCM

QUARTERLY BREAKDOWN BY CATEGORY

BUDGET CATEGORY

12/38/85 RCM

Most of the Abacus software that we've seen in the office in recent months has made a very good impression on us. Recently we've been sent two new packages.

The first is a C64/128 version of COBOL, probably one of the most useful programming languages invented. The second is a handy chart package which will enable you to see a graphic display of statistics or other useful information.

COBOL 128/COBOL 64

For those of you who like to have an easy life as far as programming is concerned, this package from Abacus Software is a must.

COBOL is the most widespread commercial programming language in

use today. The reasons for its success are many.

So what is COBOL? The word COBOL is the abbreviated form of Common Business Orientated Language. It is business orientated for use in commercial programs. COBOL is a language that is common to many computers. Therefore, most computers equipped with a COBOL system can process any COBOL program, with only minor modifications.

The one single fact that makes this a great language to use, as far as I am concerned, is its English-like format. There is no complicated coding to be done. For example, to add two items together you simply say ADD. Another example is: MULTIPLY hours-worked BY hourly-wage

GIVING gross-wage.

Obviously, the major advantages of such a language lie with the commercial users more than the home micro market. However, anybody who likes to do accounting programs or business software will surely find it advantageous.

Ingredients

Basically, COBOL programs are split into four distinct sections, these are:

IDENTIFICATION	division
ENVIRONMENT	division
DATA	division
PROCEDURE	division

The IDENTIFICATION division identifies the program. In addition to

required information, the programmer may include such optional extras as the date of the program, and the name of the programmer. This division is completely machine dependent.

The ENVIRONMENT division specifies the equipment being used, and some information about the files that will be used.

The DATA division contains file and record descriptions being manipulated or created and the individual logical records which comprise these files.

The PROCEDURE division is what we can call the 'Program'. This section contains the ENGLISH-LIKE statements that go into making up the program flow.

Structure

Once you have mastered this breaking down of the overall program into these four sections, you are half way there. Very briefly, I will demonstrate the structure of the above divisions. This structure must be adhered to in every COBOL program.

In Example 1 the following example, all entries in capitals are mandatory. Entries in square brackets are optional.

There isn't enough room here to go into the ins and outs as to how each section is made up. Suffice to say, that once you have mastered this format, then you will have no trouble developing your COBOL programming skill.

Like all high level languages, COBOL is a structured language. At this point, I must admit that in general I do not like structure programming. Half the fun of programming to me is doing it as I go, however the accepted norm is that structuring is good for you.

I must also admit that I did have a little knowledge of COBOL before I tried this package from Abacus, consequently I was able to understand the manual with some ease. First time users would probably need to read the included manual two or even three times before it all sank in.

In general the manual is well laid out and informative. The software comprises of an Editor, Compiler, Interpreter and De-bugger.

The De-bugger is a very powerful tool which allows you to produce bug-free programs everytime. The De-bugging takes place on the source file, so there is no heavy machine language knowledge required on the part of the

user. The Editor and De-bugger sections are all menu driven, and are thus easy to use.

I think that this is so far the best COBOL program for the C128/C64 that I have come across.

Chartpak

The second of the Abacus Software products, distributed by Adamsoft, is *Chartpak* 64/128. This is a very powerful package that enables you to create professional charts and graphs, without the headache of programming.

If you need to draw a quick pie, bar, line or scatter graph/chart from your own data, you can do so interactively. *Chartpak* instantly draws it on the screen for you. You can even take your data from *Multipan* or *Calcrest*.

Chartpak also supports statistical analysis features, data reduction, exponential smoothing, least squares and a host of other things.

On the C128, the resolution is three times greater than on the C64. The package also supports a large range of different printer types.

Once again, the manual is both comprehensive and fairly straightforward to follow. It takes you gently from the initial operation stage, hardware requirements and definitions used on to the actual tutorial.

The manual contains a few example charts/graphs for you to experiment with.

The last chapter is devoted to the more advanced Data-reduction tutorial.

To be honest, I preferred the C64 version to the C128 version, mainly because I think the screen layout is better.

There are a total of nine types of chart available. Pie chart, Horizontal Bars, Horizontal 3D Bars, Horizontal Graph, Vertical Bars, Vertical 3D Bars, Vertical Graph, X-Y Plot and Comparison Plot. Everything is Menu driven with built in safeguards should you make a mistake in your selection.

I must admit that I was pretty well impressed with some of the results that I managed to achieve after only a few hours 'tinkering about'.

Diskit 5

Disk users take heart. Here we provide a handy disk routine to convert memory to data statements.

By Les Allan

A pat on the back to all of those readers who noticed that we had printed the incorrect listing with the Diskit 5 article in April 1987 issue. Slapped wrists for us not noticing.

You will find reprinted here the full article together with a correct version of the Memory to DATA statements program.

There are occasions when it is desirable to convert a section of memory from machine code to a Basic program containing a re-boot and set of data instructions that represent the original machine's memory.

This program provides the user with the facility to 'read' sections of machine memory to do just that! In fact the Basic loader for this program was produced from the very same routine.

Using the Program

Start and end addresses are entered to control the range of memory to be converted. These are POKEd into the machine code routine resident at \$C000 which re-locates the Basic loader and performs the operation of 'reading' each byte to provide two digit hex number in the data statement e.g.

```
$8000 00 90 00 90 43 42 4D 80
10 DATA 00,90,00,43,42,4D,80
```

This process is repeated for every byte within the range as previously specified. The completed data listing is then saved to disk as DATA and should be re-loaded prior to running to establish start of variables which begin at the end of the Basic loader.

The SYS address contained in the Basic loader is the warm start address and should be modified to that required by the nature of the area of memory being converted.

The program must be typed in exactly as listed and saved prior to

running. Error trap routines are included to ensure that the data as read is correct. The program, when run, stores the relevant code at a temporary

address of \$8000 and when prompted relocates the working program to Basic (\$0801) and saves to the program to disk.

Filemaster

There are many databases available for Commodore computers and the choice can sometimes be bewildering.

To help, we've had a look at Robtek's Filemaster.

By George Duval

Good basic business packages for the Commodore 64 are few and far between. In particular, good databases are not prolific, mainly because the difference between a normal 'card-index' type database, and a full 'relational' database is more significant than most people think.

If all you want is a database to store names and addresses of friends, which will only need to be called up occasionally, then almost any simple record system will do. If however, you want to create a variety of fields, and then create reports on the similarities and/or differences between them, then a good relational database is essential.

This latest offering from Robtek, the company responsible for one of the first good multi-purpose cartridges for the Commodore 64, is a relational database for the Commodore 64 and 128. Thankfully, the company has had the good sense to slightly rewrite the program for the 128 so that it takes advantage of the 80 column mode.

Once you have loaded the program for the first time, you are presented with the first of a series of menus, this one being called the Job Menu. The options available from this menu are:

1. Expand file
2. File list on screen
3. Create a new file
4. Close index
5. Searching/change.
6. Change diskette
7. Printing
8. Sort

9. Select another file

- A. Quit
- B. Disk routines

It is advised that first time users should automatically select option 3, however, in use, a disk must first be prepared on which to save your file. Options 1 and 2 are self explanatory, however option 3 is where the user establishes what form the database will take, and therefore requires more description.

Setting Up

You must first name the six fields and, once this has been done, you can choose the size of each field – in characters – and then the amount of records you intend this database to consist of. In the 128 version of *Filemaster*, you have the added ability to use numeric values, which can then be calculated with.

The close index option is essential to anyone creating a long database as in effect it updates the file each time it is used. If the computer then crashed, you will then at least have created an available index on the floppy. Search is a very standard facility for databases, and it is reasonably well implemented in *Filemaster*, although it does tend to be quite slow when working on long files.

If, during use, you wish to change disk, you must first close the disk you are working on, and then inform the computer that you are about to change

disks – tiresome, but necessary. To print any or all of your file, option 7 is totally adequate, allowing for the printing of documents or labels. Sorting, another essential part of database is also included in *Filemaster*, and the sorts seem both good and fast, allowing any file to be organised very simply.

One neat inclusion is the disk routine option. It allows you to delete files, reorganise a disk, format a disk, reset your drive and rename a file. In 128 mode this option will also produce a directory of your drive, and tell you how much free space (in blocks) is available.

Verdict

Overall, *Filemaster* is a good, though by no means perfect, relational database. It lacks any form of report generation and thus limits its use for serious applications. What it does, it does well, although the manual is poor, and therefore a few hours of trial and error are necessary to make the most of any database. Nor is it exceptionally cheap. Priced as it is at £29.99, anyone considering purchasing this database should first check if it is suitable for your specific needs. VC

Arcade Action

Get those sprites moving with these handy arcade routines.

By Tony Crowther

No matter how much time and thought you put into a game it is the quality of the graphics that makes people take a second look at it. If a game has a main character, or sprite, that looks more like a wedge of cheese than the latest hyper-galactic, fusion powered, light ship, complete with glowing engine and flashing lights, the chances are no one will bother to give your game a second look.

The routines presented here will enable you to control a sprite on a C64 with ease. Two routines are presented the first allows you to animate a sprite, so that you can move legs, helicopter rotors etc. The second routine allows you to move this sprite with ease.

Animation

In order to animate a sprite all that you are required to do is quickly change the definition of the sprite on the screen to a new one and so on until all of the different animations have been displayed, rather like the way that we animated characters in our last installment.

Let's say that in your latest game you wanted to animate a helicopter. The helicopter and its different animations could look something like the one shown in Figure 1. There are just two animations in our example so all that we need to do is swap between the two sprites in order to make it look as though the rotor is moving around.

The program "SPRITE ANIM LOAD" is a Basic loader for a machine code program that will allow you to achieve this type of animation with ease. For those interested, the machine code for this program is also included for you to follow through.

Sprites that are to be used with the animation routine must be placed in consecutive sprite positions, you can use positions 128 to 200. If you don't know about sprites then I suggest that you take a look at your manual or refer to the *Everyman's Guide to Graphics* article that appeared in the April 1987 issue of *Your Commodore*.

Before you can use the routine presented here you must have first loaded the IRQ DATABASE program that goes with this series and was published in the March 1987 issue of *Your Commodore*.

The routine presented here allows for eight different sprites to be animated on the screen at once. The syntax for the SYS call to start the animation of a sprite is:

SYS50480,No,1st Sprite Pos,No of frames,Speed

Where:

No is the sprite number, 0 to 7 are allowed.

1st Sprite Pos is the position of the first sprite in memory. You can use sprite positions 128 to 200.

No of frames is the number of

animations that you require.

Speed is the speed of the animations. 1 is the fastest and 255 the slowest.

Procedure

1. Make sure that the IRQ database is running. SYS 49152 turns this on (don't forget to LOAD it first).
2. Tell the IRQ DATABASE that you are using the SPRITE ANIMATE routine by the following command:

POKE 838,1

3. Start the Animation with the SYS 50480 command as detailed above.

To make things a little clearer I have included the program SPRITE ANIM DEMO. This simply displays a series of sprites on the screen and proceeds to move a dot diagonally across each sprite. This is not very stunning but it does demonstrate the way in which you can use the program.

Now that you can change your sprite looks like, let's get it moving.

Movement

The routine presented here allows you to move the specified sprite in either a vertical or horizontal direction.

The Basic loader "SPRITE MOVE LOAD" will place the necessary

HELICOPTER No.1

HELICOPTER No.2

FIGURE 1

machine code in memory for the routine. Again I also list the machine code program for those of you who want to see how the program works or use it from within machine code.

The way we start a sprite moving is with the command:

SYS 50180, No, x, y, xhi, dir, speed, distance

Where:

No is the number of the sprite to move, 0 to 7.

X and Y are the x and y co-ordinate of the sprite.

XHI should be either a zero or one. A one is required if the sprite is over 255 pixels along the horizontal axis towards the right of the screen. See your manual for more details of this.

Direction is a number between 0 and 3 where:

- 0 is up the screen.
- 1 is left.
- 2 is down.
- 3 is right.

Speed should be between 1 and 255. 1 is the fastest and 255 the slowest.

Distance is the number of pixels across which you want to move the sprite. For example 0 will move the sprite 0 pixels and 100 will move the sprite 100 pixels across the screen.

As with the previous routine you must have set up the IRQ DATABASE program before calling it. Don't forget to make sure that the IRQ DATABASE is switched on and then start this routine with:

POKE 837,1.

Again I have produced a boring demo program, "SPRITE MOVE DEMO". This demonstration simply sets up a number of coloured blocks and moves them across the screen at different speeds.

Over To You

I have now given you enough information to allow you to get things moving by yourselves. Careful study of the two demo programs should make things clearer if you are stuck.

To prove to yourselves that you have got to grips with the routines why not try a couple of programming exercises.

1. Try to link together the two demo programs presented here so that the sprites that are moving are also animated.
2. Write a program that moves some sort of vehicle across the screen while animating some part of it,

perhaps a car or a helicopter.

In the next installment I will show you how I would do each of the above. Plus, I will be taking a look at how to scroll messages and plot on the screen.

Important Note

As with most programs in this series the IRQ DATABASE program must be present in memory before running any of the programs. The IRQ DATABASE can be found in the March 1987 issue of *Your Commodore*.

Cross Reference

The most difficult part of any programmer's work must surely be debugging his product. Cross Reference will help you sort out your variables.

By D.J. Zimmer

Variables are used innumerable times in programs written by those who use Basic.

However, when it comes to debugging the program, they can prove a real headache, as you work your way laboriously through a listing trying to track down occurrences of each and every variable.

This Cross Reference program, has been written with the purpose of making this task a whole lot easier.

Cross Reference works by scanning your Basic program and producing a variable name followed by a comprehensive list of lines in which this particular variable occurs. You can do this with all the variables you have used and thus keep track of how your program is structured.

Getting It In

In order to run the Cross Reference program, enter the following (in direct mode):

```
LOAD "your prog" (the name of the
Basic program to be listed)
POKE (PEEK(46)+1)*256,0
POKE 44,PEEK(46)+1
LOAD "BXREF" (BXREF is the
name of the Cross Reference lister)
RUN
```

When the lister program is running:

1. Enter Y or N (for Yes or No) when asked "Do you want output on printer?"

2. If you have requested output to a printer, you will be asked: "What is your program name?". Now enter the name of the program to be listed. The name will appear at the head of the printed listing.

3. Cross Reference will then begin to scan the Basic program. It will indicate its progress by displaying the current line number being processed on the screen.

4. When the scan is complete the Cross Reference will be displayed on the screen. If printed output has been requested then the printed listing will be produced. If, however, a printed output has not been requested, then, each time the screen has filled with listing, its contents will be held and you will be asked to press the F1 key to continue. When you have pressed F1, the next full screen will be displayed and so on.

5. On very rare occasions, the Basic

program may have too many variables or too many references for the lister to handle.

If there are too many variables then, during step 3, the lister will display the following message:

Dictionary full for xxx (xxx is the variable name)

If this occurs, then look for the statement

NN=60

in line 10. NN represents the number of variables that the lister can process. Change the value 60, to accommodate the extra variables.

If there are too many references for a particular variable then, again during step 3, the lister will display the message:

References full for xxx

If this occurs then look for the statement

NR=100

in line 10. NR represents the number of references that the lister can handle per variable. Change the value 100, to accommodate the extra references.

Program Structure

Line	Operation
1-80	: Solicit option.
200-950	: Scan of Basic program text. Searches for names in each line. Adds name and line number to dictionary by involving a subroutine at line 200.
1000-1130	: Sorts dictionary entries into alphabetical order.
1200-1510	: Prints cross reference by scanning through dictionary.
2000-2500	: Adds a new entry to the dictionary. The name is added, if new, along with the line number being scanned.
3000-3060	: Subroutine to check for full screen when displaying cross references.

Main Variables

DR\$: Array containing names of variables found in Basic program.
RF%	: Array containing references for each variable contained in DR\$. Each reference is held as 'line no.-32768' to ensure that all numbers from 0 to 65535 can be held.
RI	: Array containing number of references per variable.
AL	: Array containing DR\$ subscripts in alphabetical order.
CL	: Current line number.
CC	: Current byte being scanned.
NL	: Address of link field to next Basic line.
R\$: Indicates whether printer required -Y, or not -N.

Hex Data Entry II

An updated version of our machine code entry program.

By M.C. Stretton assisted by P.A. Eves

The *Your Commodore* Hex Data Entry program has been written with you, the reader in mind. No longer will it be a painstaking ordeal, typing in all the long list of data. This program will ensure a 100% correct entry, each and every time you use it.

It has become apparent that a number of people are experiencing problems using an earlier version of this program. The program presented here is an update of this version and cures any problems that we are aware of.

For your own safety, do not use the first version of Hex Data Entry.

On first entering the Hex Data Entry, only the LOAD DATA and DATA ENTRY options are available to you. This is because the buffer is empty, and the other two options require data to be present. On selecting the LOAD DATA option, you are asked for TAPE or DISK. Press either 'T' or 'D' then RETURN. The program remembers the last Input/Output, and so it is possible to just hit RETURN if the correct device type is being displayed. You are then required to enter a filename.

If you should make an error in your filename entry, you may either delete single characters by the DEL key, or SHIFT/CLRHOME will delete the whole filename. After the prompt, hit return and the file will be loaded into the buffer. The program will allow files up to 95 blocks in length to be loaded

in. If you want larger programs to be entered, you will have to split them into two or more parts first.

The SAVE option is identical to the LOAD, except that it takes the contents of the buffer and saves them out to the given start address. This will save an executable file, that can be loaded and run, independent of the Input program.

Data Entry

The Data Entry option is the option by which you can enter data from *Your Commodore*, or your own creations. Once this option is selected you are asked if you want to continue from the given address. If you have just 'LOADED' a file, this address will be the next available byte in the buffer. (Allowing you to add more data to the end of the loaded file). Therefore if you wish to continue typing in at the last address, type 'Y'. If 'N' is pressed the program assumes you are starting a fresh entry. When this happens the buffer is reset to zero, thus losing any program currently in memory. (I have chosen \$C000 as the normal start up address purely because most M/C progs reside here). After pressing 'N', you are then asked for the starting address, in Hex. Any valid Hex number is acceptable, e.g. \$400, \$C00, \$C0400. In this example, the first figure, \$400, would be interpreted as

\$0400 by the program. Likewise \$286 is taken to be \$0286.

Once the start address is given, you are asked if you want checksums or not. If you are typing in a program from *Your Commodore* your response will be 'Y'.

The screen display now changes to show the current address being poked into. Type any valid Hex number and the program automatically skips the next byte without the need to type commas, spaces or returns. If you make a mistake, one press of the DEL key will erase the whole number. If in the no checksum mode, when you get to the end of the line, the line will automatically scroll up ready for your next input.

If in checksum mode, after eight bytes are entered you must type the two digit checksum at the end of the line. Unlike the no checksum mode you now press return to enter the line.

If the program finds that the checksum does not match the line entered, a warning tone will be sound. You will then be asked if you wish to either: a) Re-enter the line or b) Re-enter the checksum.

After checking your line, if you find you have entered it wrongly, then press 'L'. The line will be erased and you then re-enter it correctly. If you find that you have only made a mistake in typing in the checksum, then press 'C' and re-enter it. Should you wish to stop entering data, simply press return

or space bar on a blank line to get you back to the main menu. Here you may SAVE your program so as to restart another day, or you may wish to see a printout.

On choosing the print option, you have a choice of hard copy or screen copy. The listing can be paused at any time by pressing down and holding down any key. Pressing the RUN/STOP key and holding it down will break out of the print mode and return you to the main menu.

The left arrow key 'top left of the keyboard', acts as zero when typing in your data. The space bar acts as the return key when entering data, thus leaving you free from searching for the return key.

I hope that this program will help to take the drudgery out of typing in long lists of data statements.

YB

Suicide Run

A tight grip on the joystick and fast reactions are required to play this superb C64 game.

By D.W. Light

You have been unlucky enough to receive a Saint Clair C5.5 from Father Christmas.

Your quest in this fast action game is to collect as many batteries as possible while dodging the landmines, missiles and bomb craters that are out to make your task difficult.

Suicide Run is for the C64 computer and is controlled by a joystick in Port 2. Full instructions for control are included in the game.

Getting It In

Suicide Run requires five separate programs. Each of which must be typed in and saved to disk or tape individually. The programs SUICIDE RUN and S/R BASIC must be typed in using our Syntax Checker, see the Listings article for more information.

The rest of the programs must all be typed in using the Hex Data Entry II program.

If you are using cassette then the programs should be loaded in the following order.

- 1) SUICIDE RUN
- 2) M/CODE
- 3) SCREENS
- 4) MSP&CHR
- 5) S/R BASIC

To RUN the program you simply need to LOAD and RUN the program "SUICIDE RUN".

ED on CP/M

The text editor on CP/M is a complex beast, but without it you'll soon come unstuck.

By Mycroft Appleby

ED is possibly the most complex and feared transient command in the CP/M repertoire. Without this command there's very little you can do in the field of direct CP/M programming. ED is the text editor on CP/M, and is probably the most awkward one ever invented, but it's still necessary to learn how to use it.

ED was designed in 1973 and has none of the user friendly attributes of more modern systems.

How It Works

ED is a context editor that deals with a text memory buffer, an input file, and an output file. Chunks of text are passed from the input file, through the buffer where they are acted upon, and out to the output file. Occasionally, you need never even see the text!

The facility for passing through a few lines at a time is mainly a hang over from earlier CP/M systems that had little in the way of memory. ED on the C128 can cope with as much as 48K in the buffer area, any file that will not fit into this is beyond the scope of ED.

From here on, I shall assume that you want to edit a pre-created file that is shorter than 48K. The principal for creating a new file is the same except that you start with an empty file.

To invoke ED you type its name followed by a valid point filename with no wildcard characters. This can then be followed by either the output filename if it is to be different from the input name — or a drive specification if the file is to be output on to a different drive, other than the current default drive. In any other case, the output filename will be the same as the input filename and, at the end, the original file will be overwritten by the new file.

If a separate output filename is specified it must not already exist, otherwise the ED will tell you to erase

it and drop you out to the new system.

If all goes well you will see the ED prompt. If it is a new file, then ED will also say 'New File' to remind you. The ED prompt is:

;

Note the leading spaces, these become significant later.

One word of warning. Check that you have plenty of space left on your disk. If you don't ED will come up with an error message and all will be lost.

In working order

Despite having specified a filename for input, there is still nothing in the computer for you to play with. You have to load it in using the Append command or A.

For our purposes, this comes in two formats: nA where n lines are appended into the buffer; or A which will load the entire file into the buffer and is the command you are much more likely to use.

Once the buffer is full of text you can start to edit. ED works on the concept of a character pointer or CP. This is similar to the cursor except that it works on the whole buffer, so you can't actually see it. Most commands deal with moving the CP or functioning in relation to the CP — deleting from it, inserting at it etc.

nD,-nD: Delete n characters before (-D) or after the CP (D).

Commands

Here, I will give a list of commands which will come in useful when you are working with CP/M.

nA, #A: Append n lines to buffer.

B,-B: Move CP to bottom (-B) or beginning (B) of buffer.

nC,-nC: Move CP n characters

forward (C) or backwards (-C) through buffer.

nD,-nD: Delete n characters before (-D) or after the CP (D).

E: Exit ED, saving any changes into a new file.

nFstring ^ Z: Finds nth occurrence of character 'string', terminated with CTL-Z. Omitting n finds the first string.

I: Enters Insert mode. Esc or CTL-Z to return to normal mode.

Istring ^ Z: Inserts character 'string' at CP, terminated by CTL-Z. If the 'I' is uppercase then all output is forced to uppercase. Lowercase 'i' leaves all input as typed.

J: Juxtapose, this is a rather complex command and takes the form of 'nJsearch-string ^ Zinsert-string ^ Zdelete-to-string' where n is the nth occurrence of the search-string or the first is omitted. It finds the search-string, searches forwards to find the first occurrence of the delete-to-string and then replaces all intervening text with the insert-string.

nK,-nK: Deletes (Kills) n lines to and from the CP. Functions in the same way as D but on a line level.

nL,-nL,OL: Moves the CP n lines forward (L) or backwards (-L) through the buffer. OL moves to the beginning of the current line.

n,-n: Same function as 'L' but displays the line.

:n: Moves to absolute line n and displays it.

nNstring ^ Z: Similar to 'F' except that the search is extended to cover the source file on disk. It's much easier to keep the whole file in memory and use 'F'. Command 'H' needs to be used after using this command to clear up the mess.

O: Original file. Abandons all changes made in this session and restores the original file. ED will usually ask for confirmation after this command has been used.

nP, -nP: Move the CP n lines forwards (P) or backwards (-P) and display them on screen.

Q: Quit, returns to CP/M+ and abandons all changes made in a similar manner to O.

nS: Search, takes the form 'nString1 ^ Zstring2' where string1 will be replaced by string2 for the first n occurrences of string1 that are found. If n is not specified then only the first found occurrence of string1 is used. # S will replace all occurrences. If 'S' is uppercase then string2 will be converted to upper case.

nT, -nT, OT: Types n lines forward (T) or backwards (-T) on screen. OT types the current line.

V, -V, OV: Turns line numbering on (V) and off (-V). Line numbers fit into the space before the colon described earlier. OV displays the available buffer space and how much has been used.

That sums up all the various general editing commands. Remember, no number before a command usually assumes n=1, a hash symbol (#) usually means the end of the file, all of the file, or 65535 depending

on context. n=0 isn't allowed as a valid number but has a special meaning.

Complex Commands

As well as these simple editing commands there are a few complex commands for file manipulation.

H: Kills the old file and re-enters ED using the new file as the origin file.

nM: This is the macro command. Command letters can follow the M separated by Ctl-Zs where CRS would normally fit in. Sequence is executed n times.

:n: This command is followed by either the K, L, or T commands and is a 'through-to' command working in an absolute manner on those commands rather than in the usual relative way. Can be compounded with n: with some interesting results.

Rfile ^ Z: This command will read a library file into the top of the buffer. Library files can be anything, though ED assumes X\$\$\$\$\$.LIB as a default file name.

nW: Writes n lines from the buffer into the new file.

nXfile ^ Z: Writes or appends n lines to

the library filename specified, same defaults as R.

OXfile ^ Z: Deletes the file from the disk.

nZ: Waits n seconds. Useful in slowing down multiple M commands to see what is actually happening.

ED Errors

If ED comes into any problems then the message 'BREAK "X" AT c' is displayed, where 'c' is the command letter last used, and 'x' is a character representing the error. Here is a list of common errors:

: Failed search. F, S, or N cannot find the specified string.

?c: Unrecognised command letter.

O: No pre-created LIB file for R to find.

> : Buffer full.

E: Command aborted.

F: File error.

ED can also display CP/M+ errors. As is usual with CP/M errors, recovery is unlikely.

BETPRO II

The Punters Strike Back!

BETPRO II is the best Horse Race Rating program available.

BETPRO II incorporates the following outstanding features:-

- ★ The extensively tested BETPRO Horse Race Rating formula, OR the option to develop your own formula using the built-in editor program. This new formula can be saved/loaded on tape or disc, and reloaded into the main program.
- ★ Simple data entry (usually one letter), and general user-friendliness make BETPRO II ideal for regular or occasional punters alike.
- ★ Lots of winners in the top two ratings for both Flat and National Hunt Races.

BETPRO II is available for the PLUS 4, COMMODORE 16, CBM64 and 128. Tape and instruction manual £9.95. Disc and instruction manual £11.95.

MAKE MONEY! - PROGRAMS WANTED!

Have you written a Utility, or Shoot-em-Up Game or Adventure, for either the PLUS 4, COMMODORE 16, CBM64 or 128? Do you think it is good enough to publish? If the answer is yes to both these questions, why not send a copy with detailed instructions to the address below. You could make a fortune!

TORNADO 64 (Tape to Tape Back-Up)

For super fast loading, stand-alone back-up of your BASIC and/or Machine Code programmes. Programs load with stripey border, the background left clear so you can display a picture/text whilst loading the main program, also running unlimited copies of source program, linking multi-parts programs, program security, plus much, much more. No extra hardware required.

TORNADO 64 is available for the CBM64 and 128 (64 mode) at only £4.95.

TAPES! TAPES! TAPES!

Top quality ferric data cassettes (C12), individually boxed and plain labelled.

5 - £2.40 10 - £4.70 20 - £9.00 (minimum order 5)

All prices include P&P in UK, add £2 extra overseas. Immediate despatch.

Send cheque/PO or Money Order (sterling), or SAE for more details:-

BANKER 64 II

If you are fed up not being able to keep track of your bank account this program may be just what you are looking for. Simple to use as it is menu driven. It will hold full details of Credits, Debits, Standing Orders and Direct Debits, and will automatically place them in date order. It will give you statements to screen or printer including the 1520 plotter printer. Records can be stored on both disk and tape normally yearly, but can be stored up to 12 times per year for larger users. Entry to any account is by name and Security code, which can be changed as necessary. This m/c program is very good value at **£8.25 disk, £6.75 tape.**

RAMFILE II

Keep track of your Software, Records, Stamp Collection, Addresses etc. with this easy to use Menu driven filing system. Entry titles are user definable. Powerful options include search and amend routines. Printer routines allows printing of entry title, selected entry or complete files can be printed to Commodore and Epson compatible printers, including the 1520 plotter. Files can be stored on both disk and tape. Also included is an envelope print facility (not for 1520). This m/c program is very good value at **£8.25 disk, £6.75 tape.**

Special Offer - Both programs £12.37 Disk. Both programs £10.12 Tape.

"THE COMMODORE DIAGNOSTICIAN"

New from Australia, a double sized laminated, symptomatic chart for diagnosing faulty IC's on the Commodore 64/128 and peripherals. This chart contains 66 variations which can help you locate a faulty chip for replacement and is an invaluable tool for those that want to do their own repairs and save money and down time. Other features include an important hint section, pictorial layout and suggestions on where to buy low cost chips. This chart is definitely a must for the Commodore computer enthusiast. Reference Guide # 4 for C64/1541 - £5.75 includes posting. Reference Guide # 5 for C128 - £6.50 includes posting.

Tel. No:

Mark 'Madman' Easton behind bars.

It Cost A Million

Ariolasoft hit problems with its program 'They Stole A Million' that was due out at Christmas time but is only just ready for release.

After a fortune had been spent on the promotion of this product for the Christmas market the accompanying photo shows just where the Product Manager Mark Easton ended up.

We are sure that you can come up with some witty comment that Mark Easton could possibly be saying. A fiver goes to the person who we think provides the best caption before Friday 31st July.

Entries should be sent to: Your Commodore, Cost a Million Caption Competition, 1 Golden Square, London W1R 3AB.

Next Month

Have you sent in witty captions to our recent competitions? Could you have won a fiver? Next month we will be printing what we consider to be the best captions to the competitions run over the last few months. You'll have to wait until then to find out.

OOPS!

We have had a number of queries about programs which appeared in the June 1987 issue of Your Commodore. Below you will find the necessary information for any articles with errors.

Emulator 64

Unfortunately a line was missing from the machine code from this article. The missing line was 7790 and is reproduced in full below:
7790 CO 77 0A 0A 0A 0A 8D 4A:1D

Smart Lister

The commands for appending the lister program to your own had a slight error in them. If you use a commercial append program such as an extended Basic to merge the programs together you will have had no problems. If you want to use the instructions as printed in the magazine this is what you should do:

- 1) LOAD the program that is to be printed.
- 2) Merge the Smart Lister program to the program to be printed by entering the following commands:
POKE43,PEEK(45)-2:POKE44,PEEK(46)
LOAD the Smart Lister program.
Enter the following commands:
POKE43,1:POKE44,8
- 3) The two programs will now be merged and you will be able to produce your listing by entering:
GOTO 63998

List Enhancer

A small error crept into the list of commands for this program. The key to press in order to list the first page of a program is 'T' and not 'I' as stated in the text.

Analyser 128

A number of people have been in touch praising the functions of the Analysers program but are at a loss how to start the program running. Unfortunately the instructions on how to start the program were missing from the text.

In order to start the Analysers program working you should enter the monitor with the command MONITOR and then type G EAOO to start the program running, after you have loaded the program as the instructions with the article state.

You won't find these programs in the top ten!

These programs have sold thousands of copies, and yet you won't have seen them in the charts — why?

We produce programs that you can really get your teeth into. Programs like **BUSICALC** and **BUSICALC 3** which can be used at home or in the office to do all sorts of calculations, forecasts and budgets.

Programs like **MIKRO ASSEMBLER** and the **ZOOM** monitor which make it easy to write machine code programs. Programs like **MUSIC MASTER** which turn your computer into a musical instrument. And programs like the **BLITZ** compiler which makes ordinary BASIC programs run much, much faster.

We have been writing programs for Commodore computers since 1978 and now have hundreds of programs for the PET, VIC 20, CBM 64, CBM 128, even the C16 and Plus/4. So why aren't our programs in the charts?

Because our programs aren't one minute wonders, here today and gone tomorrow. Programs we released for the 64 in 1983 are still selling — and even more important, the people who bought them then are still using them.

Software should be an investment, not money down the drain. We believe that the more you put into a program, the more you should get out of it, and that's the way it works with software from **SUPERSOFT**.

The programs listed on the right represent a small selection from our range, but you can get a full list if you phone or write to the address below. We offer an excellent mail order service, and you can pay by cheque, Access, or Visa.
